Thread: [How to Downgrade 4.3.5 to 4.3.3!](#)

Echoz - September 25, 2011, 5:11 pm

How to Downgrade iPod Touch from 4.3.5 to 4.3.3

What you need: A 4.3.3 IPSW, RedSn0w, iFaith, TinyUmbrella, iTunes 10.4.1, and Sn0wbreeze. All files are in here (except IPSW): [Here](#) You need to change iFaith out with [1.2.1 here](#).

IPSWs: [iPod Touch 4g](#) [iPod Touch 3g](#) [iPhone 3GS](#) [iPhone 4 \(4.2.8 Verizon\)](#) [iPhone 4 \(GSW\)](#)

Others can be found here: [Click here!](#)

Procedure

Download Restore Files from the link mentioned above

Browse following directory C:\Windows\System32\drivers\etc , and replace the "HOST" file with the downloaded file under the "Restore Files" folder

Run Redsn0w and jailbreak the device using the tutorial here but you have to point to iOS 4.3.3 rather than iOS 4.3.4 or iOS 4.3.5.

After the procedure is complete the iPhone will stuck on recovery mode.

Open Tinyumbrella (present in "Restore Files" folder), right click on your iDevice name on the left pane then press on Start Tss Server.

Open iTunes and restore your iDevice with iOS 4.3.3 firmware using (Shift + Restore).

You will get error 1013, now use Fixrecovery (present in "Restore Files" folder).

Open iFaith (present in "Restore Files" folder) and Save shsh blobs.

Open sn0wbreeze (present in "Restore Files" folder) to create custom iOS 4.3.3 firmware and restore it using iTunes (Shift + Restore).

And you are done downgrading your firmware.

How to fix errors: Error [3194](#), [3164](#), [Error 3014](#), [3004](#), [3002](#), and [Error 1604,1603, 1602, 1601, 1600 Or 29](#).

If you have any more problems, PM me or post here.

Helped a lot thanks. I was just about to smash my fucking iPhone. I made several threads regarding my problems.

Tacitus - September 25, 2011, 5:25 pm

Would the downgrade steps work on a iPad 2 as well

Thanks, even though there are a lot of these. Yours did work more than any :D

Breakbeat Junkie - September 26, 2011, 4:41 am

I'll try this, as well... Tried to many now, lol.
Anyway, I'm getting a clean version of 4.3.5 right now.
I'll update this post!

Edit: Nice copy paste guide.

1. Redsn0w is missing.
2. "Run Redsn0w and jailbreak the device using the tutorial here but you have to point to iOS 4.3.3 rather than iOS 4.3.4 or iOS 4.3.5."

It's no link. Learn to give credits kid.

Edit2: Same as all the other guide... Stuck at "Detecting iOS..."

think_alien - September 26, 2011, 1:59 pm

it took about an hour and a half to get rid of all the errors and restore once it goes through the restore process it then says its still in recovery mode
ive tried a few different ipsw's (each time i had to work through all the errors all over again) and ireb and everything else i can find but the only way to get it out of recovery is to restore back to 4.3.5
if i restore to 4.3.3 it restores and goes through the install showing the apple logo and bar under it while its restoring but once it finishes itunes says it has detected a device in recovery and i cant save any shsh's or anything and it does this until i try 4.3.5 again and all is fine then once i try 4.3.3 it gets stuck in recovery and nothing will bring it out except going to 4.3.5
