Thread: [\[TUT\] Hack Folder Lock Password | Recover Folder Lock Password | Bypass Folder Lock](#)

ankur612 - September 25, 2011, 11:23 pm

Hello WOH members, Folder Lock is one of another folder protection or file encrypting software which helps you to hide confidential or non confidential data's safely without any unauthorized access, But today I'm going to teach you that How to "Hack Folder Lock Password | Recover Folder Lock Password | Bypass Folder Lock"

STEP 1

First open REGEDIT using RUN command, and go to the following path
[HKEY_CURRENT_USER\Software\Microsoft\Windows\QualityControl]
"_pack"="this is encrypted password ~"

STEP 2

Ignore sign , For example "espxttbqfwpm" After ignoring it will be like this "espxttbqfwpm"

STEP 3

After that just type that in reverse order, for example if the code is "espxttbqfwpm" then just type in reverse order then it would be like this "mpwfbqbttxpse"

STEP 4

This is a bit complicated step but it's the most easiest step, what you need to do here is that to move one character each to backward, here the example:

m becomes to l becomes the alphabet l is first letter before m, p become to o coz o is the letter before p, and keep doing until all encrypted password you can read, in this tutorial the password → espxttbqfwpm after decrypted become → lovepassword

Hope you all liked hackforums.net Article .. if u have any doubts or queries just comment here !

LOL. You edited your post after I pointed it out, so it wasn't "already given" at that time.
