One thing that wasn't mentioned yet. The binder in iCrypt is fantastic. You can bind any file type, any amount of files, and any size.

Client is Auto-update. Stubs are Auto-update. No need to message or email for stubs. Your stubs are yours, they are not shared.

Stubs have a vb6 wrapper, but the crypt code is inline asm.

Kappah - September 30, 2011, 9:16 pm

I don't think a USG would do any good. Hand made stubs are much better than automated. Also Stubs are uploaded on the crypter instantly so no need to PM anyone to get it. But thank you for your suggestion :)

Kyuubi - September 30, 2011, 10:53 pm

This crypter has been running for a very long time. When I joined HF it was one of the best crypters in the market and it still is one of the best today. Most crypters last 3 months and they disappear, but iCrypt has managed to stay alive.

1. You can use file pumper, just search,
2. You can PM asm,
3. Dont know, if you spread silently then you will be fine.

Nope, all you need is the crypter. NL rat is included in the \$85 package, which is another kind of RAT like cybergate.

If you only need the crypter, buy the \$50 option.

NL RAT is completely independent, its a different product. You dont have to buy both to be able to use each one.

Works 100% beautifully. Bought a copy a while ago but never got a chance to use it. Tried it today, it's beautiful! 0/35, fast and easy to use. I would only suggest a few things:

Make the file cloner optional. Whenever I try to crypt a file without the file cloner it won't let me. I think it'd be better if it wasn't mandatory. Also, you guys should code a built-in assembly info changer and icon changer. I personally don't like using outside information changers. I like to be able to make it custom as well. Also, the AIO icon changer and stuff there is weird for me. When I change the icon, on my desktop it still shows the same icon as I crypted with.

You guys should also code in a fake error message.

Other than my few suggestions, awesome crypter! Really happy with it :D

This crypter is amazing, i remember it since long time ago, so i gave a try.

I love it and i confirm that works on windows7 64 bit and blackshades.

Works Flawless, noob friendly, really simple to use, but most important is FUD.

(Oct 23, 2011 12:43 PM)Team_Fortress Wrote: [\[CITE\]](#) What is to stop people re-selling it then or just posting a download link?

It is HWID locked. Having said that the crypter is locked on one PC. Noone else will be able to use it having only the download link.

m?rk - October 23, 2011, 12:49 pm

Sorry thought I had proof but my LR history only goes back as far as this year. Sorry to bother you.

Team_Fortress - October 23, 2011, 12:50 pm

So just to get this straight, it is 0/35 and will be FUD for around 6 days? Also, what is the difference in the languages C and C++, This one being C and the attributes they give to the crypt?

????Chicago Bulls - October 23, 2011, 12:52 pm

they just have no dependencies, team fortress. and yes icrypt is fud, good service, and has new stubs.

Team_Fortress - October 23, 2011, 1:00 pm

As in C++ cannot be detected at all?

ASM - October 23, 2011, 1:07 pm

(Oct 23, 2011 01:00 PM)Team_Fortress Wrote: [\[CITE\]](#) As in C++ cannot be detected at all?

No, it can be detected... C++ VB6 ASM C are the common languages used by crypters that have no dependencies.

????Chicago Bulls - October 23, 2011, 1:58 pm

anything can get detected,
but icrypt is unique and has
been running for 4 years.. thats

You stubs are FUD. Just download the new cloners. Every stub is 100% private. Even the ones you take for free daily. Extra paid stubs are just for pro spreaders that needs more per /day.

(Oct 25, 2011 07:00 PM)Team_Fortress Wrote: [\[CITE\]](#) Are you sure, they all came up as 2/35, what can the new clones do?

Yes positive. As I said your stubs are 100% FUD. The new clones contain assembly that is not flagged by any antivirus [FUD]. You should use them everytime you need to FUD a file. So use the new clones and your file will be FUD 0/35. Thanks

Yes runtime - scantime FUD. On average stubs are FUD for 2-5 days. Most of the time stubs are getting replaced even before the first detection.

Crypter looks fine till now ..i like it.

Greetings

Flacon - October 29, 2011, 4:22 pm

To All iCrypt Customers pls pls pls do not scan on un paid sites you are making the stubs get detected very quick if u need scanning please contact me or if you have a product with blackshades you can use their online scannerr... but don t scan on un paid sites... and don t use drop box upload village to spread ur servers this is making the fud time very short.. buy private hosting... other wise the stubs will not be fud for long

Everything Is Out Of 5 Stars

?????

The detectability of each stub is simply amazing. Each stub is unique and the consumer has a choice of several stubs to pick from.

From purchasing two past crypters, I have never seen this unique way to give users almost complete detectability while giving them back-up stubs in-case their file is detected.

?????

Stability of this crypter is one of the main points I wanted to point out. The stability in this crypter is like no other. The crypter is flawless.

I tried everything in my power to make the crypter crash, yet in the end, I couldn't. It always worked like a charm, with no delay in options on the GUI.

There are also no random errors or missing ".dll" messages constantly popping up, which was a common thing for the last crypter I had.

?????

Updates are just phenomenal. There are constant updates. I've owned this crypter for about 2 days now, and there has already been an update.

You don't get that kind of dedication with normal crypters.

?????

When receiving my login and password from ASM, it seemed to have an issue. It wouldn't let me login and said it was invalid.

Immediately, I PM'd ASM about the issue and to prove I was telling the truth, I sent him my TeamViewer information and showed him the problem.

Seconds later he gave me a new account. This issue was resolved in less than 10 minutes. Again, you do not see that type of dedication from normal crypter sales.

?????

I would still consider myself a "noob" to the blackhat activity part of the internet. With most RATs, you need a FUD crypter.

This means, you not only have to learn how to use and set up a RAT, but you have to learn about a crypter and how to properly crypt your servers.

Honestly, I thought I was going to have a difficult time trying to learn these new terms. To my surprise, the crypter is unbelievably simple to use.

I crypted my file in 5 minutes successfully because of how easy this crypter is laid out.

Might I also add, upon purchasing the crypter, you receive picture instruction guides for the proper setting you must have for specific RATs/Stealers.

Overall, I would consider this crypter to be the best crypter out on the online market.

Thank You And Good Luck With Sales,

I approve this message 100%. I won this crypter in a contest and after seeing how great the crypter is I decided to keep the ad in my sig. I honestly believe this is the best crypter on Hack Forums. The coding is excellent and the support is incredible. ASM is online a lot so you will not have to worry.

If you are one of those people that seem to find a way to mess up the settings on every product you try, this crypter is for you.

If you are advanced in Ratting and whatnot and want something that does the job as advertised,

this is for you.

If you have \$50 laying around and can't decide what to buy, buy this crypter. You will not regret it. This crypter has been on hackforums longer than I have and it is still going strong.

Thanks ASM!

May I ask how big the output size would be for a say, 360kb server with your crypter's minimum functions?

I take it this bypasses most if not all runtime detection methods used by av's?

i can give u special discount if u want

pm me back xD "

so my question is, is there really a discount on this crypter or is this a scam?
thanks in your time reading this.

EDIT: I pm'd him back and asked "hey whats the discount?"

and he replied back with

"2\$ xD

add me on msn

i replied back and said "\$2 off coupon or the crypter is \$2?"

and he said "ya its a coupon code if you add me than you can get it easily xD "

sooo, now im confused. i don't think i should take the offer till i figure out if this is legit or not?

No if they are sellers of a rival crypter, the better thing they have to do, is make some sales by the people that don't buy iCrypt due to their DDOS to it.

Yeah true that, but they only stay fud for like a day or so, and they are supposed to be unique, but mine get detected in around a day even if I don't even crypt a file. I asked ASM and he told me that the reason is that they are 97.5% unique and the 2.5% gets detected on someone, so my stubs get detected too. But how is it possible all the time to get this 2.5% detected so fast?

Quick tip for the complaints about it going un-fud in a few days, rename your clones with a randomstring, use the clone editor, and change the values to random versions, and random names, change the name of your stub, and before crypting, name it a random string.

For the stub, i rename mine to about 25 chars long each time, randomly.

I do that for all places i can change something to a random string. My crypt i did 2 weeks ago is still fud.

Note iCrypt Support Client coder and Everything about iCrypt is One of the Best Crypters. Known to Hackforums. I use to be Itz only travis then someone got my account ban. Ive been around for 3 years and I saw iCrypt my first year here. Shell booters come and go. Crypters are some to know as well. But iCrypt has been here for as of my knowledge 3years Been fud for only one down time of 1 week probs. Because of A malfunction while Owner was on vacation. Now they have two main Guys on this Has to be the best Crypter I KNOW!

You have to pay \$3 for a new unique and FUD stub. (private)

Meaning if your stub becomes detected, you will have to purchase a new one from ASM so you can REFUD your file.

santoruis - November 13, 2011, 4:07 am

Quick question for Icrypt so bassicly I got like 200 installs I wanted to transfer them to the new Hostbooter client V5.0.2 seems like 9 connected of 200 could there come an update for this? cause Hostbooter is used often by many costumers like me

The owner/coder said THIS:>>>>

Yes I agree it does need to be crypted. But people purchase HostBooter for what it does, not if it can be crypted or not. Since it has been re-coded I believe developers of the crypters the public use must update their code to work with HostBooter. To be honest HostBooter isn't hard to crypt at all. It doesn't need startup, EOF or any other function at all, it does everything it needs to by itself. If I can make a personal crypter that works with HostBooter 100% then every other coder should be able to as well.

p.s. posting for contest :3

Jakeeee69 - November 16, 2011, 7:56 pm

When he says FUD, he doesn't mean for 1 week, he means forever. Updates it really fast! Easy to use GUI with Stub Updater, really worth the 50. Server has been FUD since I bought, and very helpful, teamviewed me, helped me, really patient as well. Replies as soon as he can! If you want a good crypter for a good price, this one is a must have!

Just purchased and it looks really good so far :)

And it looks like he updates alot.

But yeah looks really good and easy to use i would defiantly recommend it to any one looking for a Crypter!

C4P3 - November 17, 2011, 1:28 am

Hey this Crypter is a very very fine and good managed peace of work.

there are allways fud stubs aviable and they spent so much work into it.

The Support i get from ASM was allways very very good and Quick ofc they are sometime busy but no one is a Roboter.

works with allmost every malware i tested some IRC/HTTP bots Dark Comet / BS / XtremeRAT / Cybergate.

Remote Machines come everytime back and stay in your RAT im really happy Customer.

Big Vouch from me.

But yeah looks really good and easy to use i would defiantly recommend it to any one looking for a Crypter!

Upload the stub. And I promise you it will be 0/35. The only reason why it server is not 100% fudded is because you didn't update you Clones

It always worked in the past with Sandboxie for testing purposes, and I did not change any settings when creating the server (only ID and mutex) nor on crypter. Also, I ran it on some of my slaves and still got this error without Sandboxie.

Next thing... i've crypted just for testing 3 files with 3 different stubs - result is the same 1/11 - avast detects it - thats not what i'd call "FUD" :)

2 Things you don't know how to. You don't know how to FUD your files. You don't know how to make them small. On every sale the first thing I state is use your assembly changer for FUD ,download new clones for FUD and use UPX for a smaller output. Overall your stubs are FUD, you just don't know how to FUD them, your server is small, you just don't know how to make it smaller.

Bought this crypter a few hours ago, and let me tell you what I think about this crypter.

It is simply AMAZING, with all it's features and everything thats packed inside with this crypter you will not REGRET.

Purchase was smooth and clean, ASM did a great job with supporting me and even a noob like myself figured it out.

This is the best crypter I have ever seen in my life and I love it, it has everything I need, it FUED my Darkcomet 4.2 Server and works PERFECTLY fine, getting 50 installs in an hour, because of it's FUD.

ASM is a committed worker on this project and should never give up, this is the best \$50 I have used on Hackforums, if your looking for a Crypter that will get the job done get this Crypter right here.

Here is a quick Crypt test I did : <http://my-avscan.net/result.php?scan=MjkzOTIy>

ASM's Hard work, and great support is what makes this Crypter the best.

Now the question is, WHAT ARE YOU WAITING FOR?

Hellow, Im a icrypt Gold customer. I purchased it when mark used to sell this. You can check my very first +rep. The first thing I ever did on hackforums was buy icrypt lol. I'm still in very high support for icrypt. it's undoubtably the best.

I recently re installed my OS and i lost all the files. I would very much appreciate if someone can get in contact with me. i've been trying to reach OMC but its been 4 days and he didn't reply me a single time. So much for the customer support. I still request help. Please help me to get icrypt again.

Thank you very much.

Thanks for the headsap. Iv Contacted him. I hope he replies. ~_~

Hey there, i've got some questions.

- Can you show us some screenshots of the crypter itself ?
- Is it really possible to pay via paysafecard ?
- I'm from Europe, so the paysafecard i use will have " euros " .
50 Dollars would be like 38 euros, so would 40 euros paysafecard would be possible ?

Thanks in advance (:

I've always wanted to get iCrypt TBH and I think now is time. I just have some questions if you don't mind ASM ..

- 1- Does iCrypt have a built in icon changer ?
- 2- How often do you guys update the stub ?
- 3- Can you guys give as a peak at the interface of the program ?

EDIT :

4- Do you guys need to access my PC via TV or whatever in order to setup and install iCrypt ? or will I be able to do everything myself ?

Thanks,

LOL "never FUD" ? I am using it every day to my Hostbooter Downloader and Icrypt is always FUD with new stubs each week !!

So i receive a lot of PM because some people don' t know how to crypt with Icrypt and make their servers FUD ...Could you tell me if i can do a complete tutorial "crypting with Icrypt Gold" ?

If it is ok , I will do ;)

Duginox - December 11, 2011, 1:38 pm

Just bought the product. It was a fast and smooth transaction! The product is really user-friendly and does its job smoothly.

However, I got a 2/36 detection at scan4you.com. It was my first try, tho. I'll try another stub and clone tomorrow.

Anyways, transaction went fine and I got the product I wanted. I'd say I'm pretty happy about my product so far! Big Vouch!

Guys, ASM & Virus1x ..

Can someone answer one last question for me before I go on with this. Does this crypter need any special setups for RATs such as CyberGate, DarkComet, BlackShades and other DDosers and stuff in order to work properly ?

Spoiler ([Click to View](#)) Yeah, I know it seems like a little bit too much and I'm sorry for that. I've bought so many crypters over time and most of them appeared to be shit, so I don't wanna make the same mistakes again

No, you don't need any special settings with this crypter. Crypter is very user friendly and you'll not have any problem at all while you crypt any of RAT servers you've been mention.

does this crypter's binder allow for the bound file to not pop up every time at startup. also you able to specify what process you want to run the file under?

is the process the same for everyone or is it just the file's name. also the binding question i was basically meaning this, if i wanna bind a rat to a picture then have the rat file run on startup, does this crypter allow me to do that and without the picture popping up everytime the person starts up?

Virus1x - December 12, 2011, 10:12 pm

Binding a file to a photo means,

They run photo and they get infected..

then when PC restarts they don't see the photo but bot starts

i am using the BS http bot, now to my questions:

1) if i use the startup of the bot and crypt it without startup option, is the protected file FUD?

- 2) if i use the crypter and i will update my bots with the fud (updated) crypted file, will the old server deleted and new server installed? or will i get the bots double?
- 3) how long is it average fud?
- 4) how long do you need for a update of the detected crypter?

cheers

RAT and Crypter ARE GREAT PRODUCTS, you people that complain about the respond time, if you look at the RAT topic is under construction and there is alot of people buying the products, they have alot of people they need to respond to, basically either send him a PM or just write your problem on skype/msn/aim or where ever you got him and he will respond when he see the message, same as I did.

I am recommending this product 100 percent.

Does it support .NET files? The founder of my RAT client told me to ask you this.

That's right, I'm hoping one of them will reply.

I already have iCrypt, and before buying I asked(!!!) ASM if it is compatible with ClientMesh, just to make sure, he said that it is. However, now that I crypt my server, when I run it - nothing happens.

I tried enabling and disabling install on a rat server, checking and not the "Melt" and "bind" functions, all the possible combinations - always the same result, the cryptedserver.exe process runs for a second or two, and then simply disappears.

(Not crypted server works perfectly, as I've mentioned above, so it's not my server's problem.)

then i had 35\$ without any results so i decide to play casino roulett that was my chance to make my money more bet 2 times in roll for RED this is 23% everything i did was for Icrypt+POE+RAT i lost the money btw, now my mother will make me work. I hope to buy iCrypt with my first salary. The point is dont waste your time with cheap crypters or you will have to play casino roulett with your money to buy the working one or bad your mother will make you work 14 hours per day. If someone have the money (only 50, 59, 69 or 85) you should buy this unique combination of ICrypt-POE Stealer-NL Rat.
Vouch for Icrypt.
That has to be the most weird vouch I have ever received. Thanks though!!

(Dec 20, 2011 10:50 AM)noskire Wrote: [\[CITE\]](#) Does it support .NET files? The founder of my RAT client told me to ask you this.

Is it true? Because my server doesn't seem to work when crypted with iCrypt. It works properly without crypting.

Yes it supports .NET files. iCrypt has been tested with many .NET applications, and the result was successful with most of them.

(Dec 20, 2011 12:06 PM)noskire Wrote: [\[CITE\]](#) That's right, I'm hoping one of them will reply.
I already have iCrypt, and before buying I asked(!!!) ASM if it is compatible with ClientMesh, just to make sure, he said that it is. However, now that I crypt my server, when I run it - nothing happens.

I tried enabling and disabling install on a rat server, checking and not the "Melt" and "bind" functions, all the possible combinations - always the same result, the cryptedserver.exe process runs for a second or two, and then simply disappears.
(Not crypted server works perfectly, as I've mentioned above, so it's not my server's problem.)
PMed you about it.

Funny thing is that even expensive non depentant crypters can't even compare to us and the fact that we are running for 4 years non - stop while other crypters closes in a month or two.

Thanks for the vouchers guys

@noskire those are 3 completely different functions

Melt: makes the file disappear upon execution

Start up: Your victim will show up in your RAT/Bot even if he restart his computer.

Persistence installation: Depending on the method the virus can be difficult to remove, to even indestructible (Doubt that's the case for darkcomet though).

EDIT; nvm that, I am looking forward to the update ASM thank you for your hard work :)

ASM - December 27, 2011, 5:57 pm

Sales are paused till today/tomorrow.

iCrypt has been recoded from start. We already have the code in our hands, just a couple of things has to be done in order to make it compatible/beta test it with iCrypt. This is done to maintain the crypter FUD for even longer and keep our current customers FUD with no interruption. iCrypt has been recoded from start many times in the past for this very reason. That's why it is still running after 4 years. Thank you all for supporting iCrypt, be sure to keep an eye on this thread to witness this beast version. It will be an all out new crypter. All over again.

Estimated Completion in 24-48 hours. Old customers can get the new iCrypt Version free of charge.

Thank you.

ASM - January 2, 2012, 12:59 pm

Updated version delayed, and therefore sales are still closed. Old customers are getting FUD stubs as always. We keep focusing on implementing the next big update, until then access to the crypter by new people (old customer's will be able to use it just fine and fud) will be denied. Thanks.

ASM - January 10, 2012, 2:08 pm

Sales are officially open again.

Stub's code is upgraded significantly, but the current version of iCrypt remains G9. However that has nothing to do with you since you will still be FUD using iCrypt G9. Another thing that's worth mentioning is that after the update it is most likely the price to go up. That does not affect old customers in any way since they get any iCrypt Gold update for free.

Update status: 80%

Online and selling. Contact me to make a purchase.

I am a customer and I am really satisfied. It really depends. Sometimes 'some customers' don't use their brain and scan their crypted file on virustotal. Thus, it will get detected faster, since they will send samples to other companies. Just be smart and scan them on 'my-avscan' (or any site that does not distribute samples). I personally wouldn't worry about the FUD period. They offer extremely fast updates :) Also, you can buy an unique stub.

I think we will just have to wait for the next stub, that is usually how it works. Great crypter but because of the sheer quantity of people it tends to un-fud quickly. To many people scanning with virus total I guess.

Camaleon - January 17, 2012, 7:12 pm

Yeah it will be awesome if they can make stubs uniques per each customer but I guess that is too much to ask for.

Hey so for the binder, I am curious... It says "Premium Unlimited Binder that uses no encryption while binding. The only encryption that is done is FUD encryption and that way the binded files execute faster, and the execution rate increases significantly" So I am binding my already FUD server (crypted with a different crypter) and a .jpg. So when it asks for a stub, what exactly is it doing? And if i were to use a HIGHLY detected stub like 12/36, and I binded my FUD server, and the .jpg with the stub, and a clone, would my server stay FUD, or no? If someone could explain this to me that'd be great, thanks!

One of yesterdays stubs was 0/37 (I was like "fuckkk yeahhhh") but only for a few hours.

Im wondering how many ppl share the same stub? Im talking about the actual code.. you could just run it through something like filerenamer to get 500 files with different hashes, which are all still obv exactly the same file

It got detected after only like 20-30 downloads (binded to ~100mb file, so no virustotal uploads etc)

You always say that everyone gets different stubs, but can you prove this somehow? If not, why does it get detected that fast without any aggressive spreading? 1

Im wondering how many ppl share the same stub? Im talking about the actual code.. you could just run it through something like filerenamer to get 500 files with different hashes, which are all still obv exactly the same file

It's always been like that, you really do need to update your slaves everyday. Most stubs I get are 4/37. It's a good crypter and all, but just gets detected WAY too fast. I'm assuming the stubs generated are shared by different users.

Not really what happens is, We have a large customer base after being on HF for 4 years, It's not that we share stubs everyone gets UNIQUE stubs however all stubs have to SHARE some sort of code. be a few strings to a few hundred string, I believe if I recall correctly all our stubs are 10-20% similar. meaning your stubs are 80-90% unique, I'm sure since it's such a big project that some AV company has purchased a copy by now and is on the list getting STUBS and dumping and distributing the strings to other companies to get detections, Just my point of view because even when we make BRAND NEW STUBS, some last weeks. Some last only meer hours according to you guys I've personally never had this problem but, I'm sure your telling the truth.

shanna_doll - January 31, 2012, 7:06 am

Can you than try to check users and possibly remove antivirus companies from list of users because this is not okay, stubs gets detected sometimes really fast..

Would like to know an ETA or something. It was corrupted in the last update.

Damn, one of my big needs with this is a binder.

Just bought the crypter, so I will give it some tests and come back to edit this as a review vouch :)

VOUCH:

Transaction:+ Smooth Transaction via PayPal

+ Very Quick to reply to PM's / Online often for guidance

- Took quite a few PM's of my info to finally get the ball rolling, however this was definitely only a minor "negative point"

Crypter:- Currently there is an issue with the binder, which affects me 100% for my use of this crypter for bitcoin generation spreading.

BINDER TEMP FIX SOLUTION!:

Scottocs Wrote:The problem with the binder is that the first item you choose to be included in the binder will be corrupt.

For example, I could include calc.exe and server.exe in that order, and calc.exe would give an error but server.exe would not.

If you need a temp fix, include a blank file or something as the first file, then your actual files.

Yet to review the full features, overall I am happy and impressed with the entire deal and crypter, I just personally need the binder to be fixed to justify my reason for buying it.

I will finish this review once the binder is updated and working flawlessly again!

I will be available for support tomorrow

The Anarchist - February 14, 2012, 3:20 pm

Haven't received any messages back from ASM?

I was wondering when you'd be able to sell me new stubs?

OmniCode - February 14, 2012, 6:22 pm

I'm looking to purchase this Crypter.

Heard a lot of good things even in this thread itself.

I also recently purchased the Bshades Rat.

So I want to know as of NOW!

If this crypter up to date, 100% FUD, The current version up to date Bshades Rat?

Please let me know here/PM.

If I get yes and possibly proof?

I would be purchasing this today or tomorrow. :)

ProElite - February 15, 2012, 2:19 am

Is this actually FUD, and working with Blackshades ?

Zer0! - March 7, 2012, 6:36 am

Hey guys when is the new version coming out? I am very excited about this.

MLGHacking - March 7, 2012, 7:24 am

iCrypt has been around for so long now. Legit, over 4 years. I remember back in the day when I was working with deadwalking and other coders and UMC himself when this crypter first came out. I remember when I got to get the "uniques" haha...Those were the days when my bot would stay FUD for months. But anyways, everyone one should really know about this crypter. It has been proven to work 100 percent for over 4 years now. There is close to nothing in terms of crypting conflicts. The current seller(ASM) is one of the most reliable sellers on the market now and I'm glad he was given rights to sell. Overall Im extremely happy on how iCrypt has evolved. It went from iCrypt, iCrypt Silver, iCrypt Gold. Back in the day "GOLD" used to have a password stealer option but was removed because of conflict issues with some of the nooby consoles. I think everything about this crypter is perfect except the amount of people that have access to it. 2 stubs for A LOT of people. I think there should be 10 stubs put out but split up evenly between all the customers so that each group can see 2 stubs, but each group of stubs is actually of different structure. Thats my only reccomendations. If you are interested in purchasing this product, you will not be let down! Contact ASM and he will provide a smooth and easy purchase and give you support if needed. Also, glad to here a New Version is coming soon as well =).

condom - March 8, 2012, 5:44 pm

the toss states that your license may be revoked at anytime. complaining in my opinion wont get you anywhere but banned. these guys are providing you with a service. just be glad to use it. i wouldn't like to have icrypt gold ruined because of a few others who dislike it. its just that, coding doesn't just come out of nowhere, you must think. especially if your the one coding it. just give them a break, this is coded in vb6.

Virus1x - March 9, 2012, 9:31 am

Dose anyone have the clones I lost them.

Nivarka - March 18, 2012, 4:37 am

I lost the download, link isn't valid any more. Can you send me it again?

MyNameIsNe0 - March 18, 2012, 10:06 am

I am still waiting for the re-activation since the update. I have PM'd my payment details and waiting for the link of the update like Predator said.

KEYIRC - March 18, 2012, 11:06 am

I've Pm'd & contacted on ICQ.

I've not even recived a "Im busy bear with me" message. :(

It's been over a week now that I have had no crypter :(I've contacted Virus and ASM but no reply yet.

Still waiting and sent ASM my payment details numerous times to no avail.

If your thinking of buying iCrypt, I highly recommend it, I do however also recommend that if you don't yet own this awesome crypter and want to buy it, Wait.

I'm more than confident ASM will be on the case however he surely wont need more customers until hes pleased his customers that have already paid and are not getting what they have paid for.

iCrypt is shit hot, Much better than Cryptex and that horrible fucker killamuvaz who has the customer service skills of a grizzly thats just took a fist up the arse. Never, Ever buy there shit! :P

Please ASM, Reply to your PM's!

I know im not the only one waiting for a HWID change and the longer it takes the worse it looks on you!

Just my two pence.

Peace

If you noticed it, it's a common problem with the new iCrypt update. Sheikh crypter is good but the customer support and the owner suck hard. I didn't have problem with the crypter, I had problem that Sheikh canceled my license for no reason.

Stop trying to advertise your thread here (you are probably Sheikh's 2nd fake account, or his brother or smth) and GTFO little kid.

Kye - March 19, 2012, 10:20 pm

So I tried to use lcript for 3 days now and it just says "new update available" and asks if you want to download yes or no.

I click yes > download > then when I run it... it says "not a valid win32 program" or something along the lines... whats up?

If I click "no" instead... it just says 'login failed'

this really sucks.. I liked the crypter but this guy and his customer support is terrible. He like NEVER answers to anything... skype, email, or msn.

He doesn't even come online.

This sucks /: Paid soo much \$ for it too.

Just so you know, ASM isn't the coder for this - so unless his customer support is appalling, I don't think he should be taking anywhere near as much heat as a reseller as the programmer should be.

None the less, I'm very disappointed to see the end of iCrypt, wasted a good \$50 on this..

ASM is just a reseller by the looks of it, everyone angry with it or wanting updates why not contact the actual coder?

I think that this thread is allowed to stay open because Omni has to keep up his side of the agreement since it is a paid sticky, he can't close it premature because of the agreement that he has when you pay for a sticky.

I hope for my sake, and all the other customers sake that it continues to stay open and that we can still get iCrypt. (yn)

Also, good news is that the OP is back up with the sales image. ?

The new update didn't solved anything. Still can't connect to auth server..

Virus1x - March 23, 2012, 7:55 am

Auth Server is currently DOWN thats why you guys can't connect, this has to do with ASM having a life outside of HF and being unable to get back to bring it back online atm..

Yup, back up, no update on stubs, however, since 3/16.

Zyn0n - March 23, 2012, 8:50 pm

Guys... This project has been dead for long time but since idiots kept buying this shit-coder kept making new stubs without caring much about this crypter.

This shit was and will always be only a SCANTIME FUD (at best) crypter and nothing else (which means nothing to have a SCANTIME FUD crypter).

And some of my story: Bought package (iCrypt, Stealer, R.A.T) from ASM after chatting with him at MSN and confirming that "Bypassing proactives" statement isn't a lie--he said that it's not a lie and that for best compatibility to bypass proactives I should buy also a R.A.T.

Okey, he asked HWID from me for R.A.T (needed to compile client with my HWID in it or something like that so he never sent that to me even after asking multiple times--just completely ignored me) and thats was last time we chatted about R.A.T.

But ya, I still managed to get crypter and stealer (never tested, don't care) and I obviously tested it right away. Results were pretty much what I expected to be honest (was desperate at the time because of Sonar so bought everything with "proactive" in name). It was 2/42 tho but that doesn't mean anything since "ONLY" every fucking AV was detecting it because of second layer of protection AKA proactive. Tested few R.A.T's with various settings with various AV's (AVG, Avast, Norton360, Kaspersky IS2011, NOD32, Malwarebytes) but results were next: everything detected it.

Made these tests pretty fast after buying and contacted ASM with this problem but he didn't answered to me anything and was offline. Then he came back and said something about new version and I thought "mmmkkkaay... i'll wait"--next version came and everything was same and I contacted him again but he never replied (everything was still pretty fucked up).

No replies for long times etc and I decided to forget, don't really care about money lost but mainly it hurts when u lose money to people like ASM and his faggot buddy coder. Okey, I contacted one more time after few weeks and he offered me a refund but after I replied with information where I want my refund he never repliad again after that and obviously I didn't got money (yes, I Have contacted multiple times and added him to like every place where he has account icq, msn, aim, jabber).

Huh, wanted to make lil post here but this turned out pretty looong. Thoughts aren't well organized here but hope if somebody is interested can get a point. Just to people.. Don't buy!

Cheap but still overpriced scantime crypter with shady past (backdoors in stubs, bad support, removing posts from thread even if they are true) and even nowadays still shady. It's easy to make money out off people who are using this forum and you guys really think that Omnicint or what ever was that nickname is having so popular forum with desperate skids and adult retards who want to hack hotmails with FBI login screen--you really think that he won't exploit this situation...?

Donators don't get banned and if you are good pal w/ admin and suck his cock then he won't ban you also!

Oh... prolly this is too long now... nothing better to do now tho since my favorite forum is down (thanks to HForum uber hacker who can ddos--he's prolly most talented hacker ever! and your booters source was and will be available)

PS.

I really recommend this software to everybody who have too much money and want to donate to desperate retard(s) or want to see how worst crypter looks like + crypt own files = destroy own botnet!

Forst most other people, I.E THE FUCKING MASSIVE LONG LIST of people waiting for a hardware ID change it's getting beyond a joke. Family problem or not, he should stop sales and update the thread at very least.

gamla - March 26, 2012, 3:38 am

Mate its not the fact he should update if he got problems with his family, i could understand him.
But what he could try atleast is letting the others from the support team helping him to create some stubs etc, in my oppinion its not the 50\$ worth as how its working atm.
Its really annoying when u want to crypt your files they stay 9+/37 thats really much for a good crypter.
also the support dont even answer @ msn what i dont understand btw :(
I hope you guys do something with our reactions on this thread and start thinking of how they could make their customers even more happy and giving nice feedback to others and help you getting more customers, also it says FUD but imo it has never been in the past 2 weeks im using it, or maybe 3.

or are the updates or are the seller for a while over icrypt response to this happening?

jonathan001 - March 29, 2012, 5:08 am

lol man read the pms if the support is like that then what? u sell?

eL33Te - March 29, 2012, 5:45 am

Man you need to update the icrypt and add more stubs!!

KEYIRC - March 29, 2012, 6:40 am

This project isn't getting updated. The thread got removed from sticky.

Read the last 4-5 pages, Seller & Coder are no longer replying.
Don't send them a penny until its sorted or he refunds everyone.

Bill Nye The Science Guy - March 29, 2012, 9:59 am

Just because it got removed from the sticky doesn't mean that it is done and over with. I'm assuming that ASM simply did not PM omni to get his thread back up on the sticky (so someone else got it) and because he doesn't have any time currently to manage the product because of IRL things.

You are correct, However ASM & the coder are no longer replying to any PM's and not answering on ICQ, despite signing into HF near enough daily.

This thread lost it's sticky status, then it got paid again and was a sticky for about 5-6 days, then everyone posted all the comments on the previous 5-6 pages & suddenly a paid sticky was removed.

Surely a paid sticky lasts longer than a week.

Stop making posts of shit you don't know what your talking about.

#1 Stickys are a week by week basis. \$50.00 PER WEEK.

#2 If it was dead, by this ToS he coulda posts this is done closed it and been done with it he has no

reason to lie or to keep it open, lifetime of crypter is lifetime of crypter not your lifetime.

#3 Your not staff you haven't spoken with him and you have no fucking clue whats going on in his personal life, I'm sure almost 90% of REAL HF kids think that HF is LIFE, however there is existence outside of HF and ASM is dealing with some shit in it.

#4. If there were any updates or anything I had been told wasnt already posted here then you'd know, we would give you an update if we had one

(Mar 26, 2012 03:38 AM)gamla Wrote: [\[CITE\]](#) Mate its not the fact he should update if he got problems with his family, i could understand him.

But what he could try atleast is letting the others from the support team helping him to create some stubs etc, in my opinion its not the 50\$ worth as how its working atm.

Its really annoying when u want to crypt your files they stay 9+/37 thats really much for a good crypter.

also the support dont even answer @ msn what i dont understand btw :(

I hope you guys do something with our reactions on this thread and start thinking of how they could make their customers even more happy and giving nice feedback to others and help you getting more customers, also it says FUD but imo it has never been in the past 2 weeks im using it, or maybe 3.

Do something with this iCrypt support.

EDIT : dont take this like a attack since i try to help you guys and telling you what you could make better etc, im dont mean this wrong.

This couldn't be done because the stub's have source code for the crypter in them and if I was running a Project I wouldn't trust anyone with my code either, not to mention the person given the code would then have to isolate the flagged section and properly re-code it so that it's undetected again, this is not an easy feat

(Mar 29, 2012 05:08 AM)dalai Wrote: [\[CITE\]](#) lol man read the pms if the support is like that then what? u sell?

Only one person has access to HWID system, ASM

thus no one is selling iCrypt. we are all waiting for ASM to come back he's not continuing sales while he's gone trust us on that

Rozgeil - March 30, 2012, 6:48 pm

next time we should buy a cheaper crypter that stay longer fud and is not depending on a kid that have problems with his rl and thats the reason (dont fcking know why) that the auth server is down....

demoncrest - March 30, 2012, 10:59 pm

I have faith in ASM, he's been doing this for a long time and has always followed through on his word. I am sure he is just busy with some things like all of us are... I mean we don't (at least I don't) sit around at a computer ALL day everyday. I know it's a bit different in this case because we did pay for a service, but he is a human too... give him a little break, this service is amongst the best on HF.

I do complain a lot about these stubs getting detected right away always which fucking pisses me

right off, but I know that ASM is gonna work on finding a solution to that... he won't let everyone down!

pacman90 - March 31, 2012, 3:56 am

trust me, he will let everyone down

its funny how he "got problems in real life" all of a sudden, right when the scam thingy got big and no one bought it anymore (at least I assume ppl arent retarded enough to still buy it..)

oh and thanks for posting how much the paid sticky is virus.. now it makes even more sense that the hf staff doesnt do anything.. I mean they get \$200 per month for doing nothing at all

!Currency! - March 31, 2012, 5:12 am

You have to remember ASM is just a reseller of icrypt. Im not sure ASM can even code a crypter, but maybe he could at 1 time refud the stubs.. but i even doubt that.. The creator of icrypt does all the refudding i suspect, and it will be him who suddenly stopped the supply, but ASM continued to sell even though..

he was kind enough to send me a new copy of icrypt, which i had originally purchased from "dead" or OMC as most know him.. and it used to be great! BUT the copy of icrypt gold was already too saturated and i never managed 1 fud stub!! So pretty pointless to even get sent a license again!

So what i am saying is Icrypt Gold as we know it.. needs a recode from scratch, which OMC should be getting on with hopefully, if he wants too.. and im sure ASM will be waiting for this moment to happen, then if he still has the dignity and customer base, he will resell this new Icrypt, and send updates to all his lifetime customers.. and then everybody will be happy, for about a month until this happens again.. and no fud stubs are possible again. lol

The other option is to end the life of Icrypt.. with its reputation in tatters, and all it's customers in tears, and release a NEW crypter which will be awesome and will last a lot longer fud.. and start a new customer base... from scratch. Good for some, BAD for the many many paid customers including me!!

Kill4joy KJ-Vulcan Tools - March 31, 2012, 9:45 am

I think they oversold this crypter massively, and now they are just trying to ban people's licenses so they can cut down their customer base.

Illumin?ti - March 31, 2012, 11:23 am

It's funny how ASM has IRL problems. So what hapenned to the coder? Let's see what other bull shit they make up. It's also funny how when you PM ASM for support he doesn't reply but when my friend PMed him on purchasing it he said "How would you like to pay?'. That's some funny shit right their also look at my signature. Also note that THEY PAY USERS TO VOUCH or in exchange for this crypter just look at my signature and you will find proof there.

well if they were paying there users to make false vouches for them, i haven't seen a dime. i have only vouched on behalf of being a user of icrypt is all.

!Currency! - March 31, 2012, 4:18 pm

if you have been a user of icrypt in the last few months, you would realise there have been very little or NO fud stubs produced. And even if a fud stub was produced, because of the huge customer base over the last 4 years... it isn't long before its detected... it only takes one person to upload to VT etc.. and its not fud for all.

So it is quite obvious, over the last few months if not longer, people have been false vouching.. i mean i WAS icrypts biggest fan up until a few months ago.. mainly because i bought it at the beginning from OMC... and only dealt with him.. things back then, even before icrypt "gold" was released where great. Now it looks like Icrypt has a very tarnished reputation due to people's greed.

Im so gutted, because Icrypt is a great crypter.. its the huge customer base, and people false vouching that have let it down.

Maybe a new version is created.. but as i said, it would have to be a new project.. so it's not good for me and hundreds of other loyal customers.. although i think i only payed \$30 originally.. so i got my moneys worth at least :)

whats with the fake support number that just rings endlessly?
does anyone ever actually pickup the phone?

i am a customer of icrypt. icrypt is never fud and doesnt last long. what has been annoying me latley is every week i must contact the coder omc (which usually takes about a week) just to be able to log into icrypt which again turns out to still not be fud after i login and dload a stub, ever :(am i the only one that has this problem ? will i ever get proper icrypt support , will these problems ever be fixed or have you guys just stolen my money?

Most people don't give it enough time to finish downloading, but I will send you a link.
they also try to overwrite the client that is download the newer client ?

Anyone Know if iCrypt work for DDoseR??

The Equalizer - April 6, 2012, 4:05 am

I know that would be matter of time when you start with update client and stubs. xD
Sadly ASM has some private/family problems,and thats why it has reflected on sales.Four years old project which last this long you can't reject just like that,but when you have impatient and unreasonable members then you got problem.
Beisde stub was FUD for me after update.
omc keep on with great job. ?

Dunno where the hell your scanning at. But I scanned that same stub like 2 days ago and it was 1/37 then. I dont think they regress often.

If you crypt a normal file, and you dont even have anything BH on it. It usually comes up clean ;)

(Apr 7, 2012 11:48 AM)Caspa Wrote: [\[CITE\]](#) I also cannot download the new clones. Who's this deadwalkin guy and how do I contact him?

I am the coder of iCrypt, POE stealer and Novalite rat in case anyone is confused. My email is deadwalking at live dot com.

I fixed the scrolling news in iCrypt, log in and read the news and it will tell you where to download clones if you can't download though the clinet. I dont wanna post on open board.

DONT SHARE YOUR STUB with ANTONE!!, They have their own stubs- Anti virus are active and try to get stubs though IM and Board.

One guy on the board is even asking for the client saying he is the coder. If users need help let them come to me.

Not to blame omc (I think...) but I've gotten myself infected by someone, and haven't downloaded shit from anyone else... can't pin it on anything else.

Please post here if you have some strange shit going on lately... I dunno what's up but something sure is.

PS: If someone would be able to hook me up with the optimal settings to use iCryptGold with DarkComet I'd be super happy... I couldn't find it anywhere :S

(super apologize ahead of time if it's somewhere simple and I just missed it when skimming over the thread)

Please post here if you have some strange shit going on lately... I dunno what's up but something sure is.

PS: If someone would be able to hook me up with the optimal settings to use iCryptGold with DarkComet I'd be super happy... I couldn't find it anywhere :S

(super apologize ahead of time if it's somewhere simple and I just missed it when skimming over the thread) IF you got infected, it dam sure wasn't my stuff. Figure it out.

Anyway, for DarkComet and Basically any program you wanna crypt. Using anti's (like anti VM, Anti this and that) packing with UPX, or attaching plugins can interfear with crypting making it unstable or fail to work at all.

Most times with iCrypt you can pack after crypt with UPX, however UPX itself MAY or maynot cause a det, so if you decide to pack after crypt, your on your, in this regard.

.

If members are interested in iCrypt, Novalite Rat, or POE stealer:

To buy PM me, or even better add me to one of the following IM chats:

MSN: GetNovaPro (at) live (dot) com
MSN: deadwalking (at) live (dot) com
Yahoo: omc1337
AIM: oldmankirt

The only email i check is deadwalking!!!! Dont email the others!

HWID CHANGE

invalid Space/caps/spelling

HWID System down atm.

any of the three can cause the above error contact

ocm or asm to resolve this.

New version isnt much different.

Same stubs for all customers.

6/37 for a fresh stub is a joke, I could FUD it better using a can of stella and a toothpic.

I must say this is the worst crypter Ive owned.

It started off awesome and now is just in an horrif state of affairs.

ALSO IF ALL STUBS ARE @UNIQUE@ then I think we should all sample are stubs and see just how different they really are,

Such a shame to see such a good project turn into a piece of useless shit.

did you know that you could possibly temp halt your scanner and add an exception for icrypt gold? i recommend you do that because your scanner will submit suspicious files to a/v in background. if you can't do this then you shouldn't be using a a/v and crypting.

Dont waste your money. Obviously you can tell support isnt doing anything for current customers. Anyone who says they like this cryter either 1 just sucking up or 2 never tried anything else.

Fact is this is an over used product. Its been around for 4 years imagine how many clients that is. The FUD time is going to only be an hour or so which it is. Check out Recent Icrypter reivews not random ppl posting in here like groupies.

Kyle FYI™ - May 21, 2012, 5:35 am

ICrypt is now dead, the coder stopped updating.

xPORNxSTARx - May 21, 2012, 6:45 am

it sucked anyway, rarely fud, and if it was - it was detected after hours. the only reason it "appeared good" was because he threatened to remove licenses if we discussed the product in thread, and if we did discussed it in thread, he got it removed by the admins - which is fu**ed on their part for doing that. every other product here is reviewed in sales thread by customers.

And if anyone actually believed this was good after using it, is fuk'n retarded, try using it on more than 20 bots that probably dont have anti virus anyway.

Its dead, omc is still in the scene on other forums selling products. He obviously sucked whatever money he could and abandoned it. thread should be CLOSED or people will continue to comment on it for the next 6 months.

STOP , THIS CRYPTER HAS BEEN CLOSED, IT NO LONGER IS RUNNING.

404™ - June 10, 2012, 1:57 pm

I have buy this Crypter and i user this 3-4 time and this is Fud 1 day :S lol

Simaniurity - June 11, 2012, 3:16 pm

When will you send to me details for POE Stealer??? I am waiting for it since half year.

Give my money back then? You can't just remove everyones access. Why is the POE still working and not the crypter?

same fuked up shit come for me too

wat the hell is happening we lost money ??

greenarrow - June 20, 2012, 5:39 am

Dunno, I think its dead now....? Both the stealer and crypter give hostname errors

Dem?n - June 20, 2012, 9:11 pm

Yes it is dead, I want something to reimburse me. It was supposed to be lifetime.

It doesn't work like that, lifetime means however long the project lasts, not a real "lifetime".

eiswuerfel - June 21, 2012, 2:08 pm

scam bought this last year. not fud after one month i cant log in.

diamount - June 21, 2012, 2:35 pm

This fraudster should be banned. It's really annoying when people get away with this sort of thing.

Its not his crypter.. He is just saying that.

DO NOT BUY THIS CRYPTER ANYMORE!

Donald Draper - June 21, 2012, 3:20 pm

Yeah man. I bought this and it's never been FUD for even 1 day. Dude should be banned. He also stated you cannot complain in the thread or in the forums or you would lose license. It was a damn shame

codeine. - June 21, 2012, 4:42 pm

i bought this the 3rd year it opened up

always FUD!

is it still dead though?

0m3r - June 21, 2012, 9:37 pm

is it going to up again? pleasee i hope it willl come back soon

scorpionz89 - June 24, 2012, 1:31 pm

I paid 50 bucks for this last year stopped working after 2 days, wouldn't refund me or allow me to sell my copy to someone else for a cheaper price.

Dem?n - June 25, 2012, 6:32 am

Yes it is still dead everyone. NG Crypter has stolen the show D:

condom - June 26, 2012, 12:47 pm

I would still use it if I could connect to it. It was the best in my opinion.

did you ever scan your server? ?

xXx pR0 h4X0r xXx - July 7, 2012, 4:12 pm

This crypter was a complete joke...

Never was FUD even when it had less than a hundred customers...

unkn0wn© - July 9, 2012, 12:11 pm

dont buy it anymore... times over for this now. doesnt work anymore

Judgement Day - August 3, 2012, 4:38 pm

wtf so this crypter don't work anymore??? that's bullshit! wow i h ave not used it in months and when i need it to work it don't! im losing my bots cuz of this

You're complaining about a 4 year old crypter... Makes alot of sense.

DrSpy - August 3, 2012, 6:19 pm

when it will be back ? :(i am still waiting for this :(

no one can buy this, as it ran 5+ years. omc stoped it.

Daimer - December 10, 2012, 3:50 am

I wish this was still running. I liked the crypter.

Gørilla - December 10, 2012, 3:54 am

man does seeing this thread bring back memories!

omc - December 10, 2012, 12:21 pm

I will consider selling the source. Whos interested?

limb3r - February 4, 2013, 11:52 pm

I would like to purchase a licence of icrpt crypter. But I'm hoping that I can get a discount seeing as I already have a POE stealer licence(bought just last week). Unfortunately, its not returning victims, hence the need for a good crypter. Kindly give a discount and I'll purchase asap. Thanks.
