You mean the program panel or the thread panel? Both are made from scratch, the thread was even more difficult that the program. ?

No, i'm talking about the PHP panel. I do believe that it's a public panel from a public stealer.

The panel is original to iCrypt silver and private first versions of gold. No credit is needed. Only the panel color (ini) was changed for the open src panel.

I stopped iCrypt silver with stealer long ago, as it was too much work for the money.

Good luck with sales. This is an excellent stealer.

Also, the price is very high for a product with not too many options and not FUD.

Yahoo stealer is a lie.

Says a guy who is selling a .NET Dependencies Stealer so he can promote his product, lovely. I would like to thank you because guys like you proves that POE bothers a lot. And Here is your answer.

Yahoo stealer is a lie? Wow do you have the source code? Where exactly do you base this claim? Are you kidding me? Reported for trushing.

Im sorry but our stealer is not coded in a language which requires the victim to have 2.0 NET framework to work. Our crypter has no dependencies at all. So search before you speak. Reboot and try again.

Price is there for a reason. If you don't like it, dont buy.

No, the victim has to execute an exe file. When this is done, his saved passwords are sent to you via FTP. FTP is easy to setup. However if you don't know I can easily show you via TeamViewer.
Thanks.

I'd like your stealer to not only steal the things istealer 6 or backconnet does.

How about adding something unique?

RDP, Poker, More FTPs, More Browsers (Safari, Maxthon, Iron, Flock, ..), E-Mail clients, ..?

Everything ZeuS steals?

You could just search what Carberp and Quakbot steal and then try to implement these. (Even though carberps ones are mostly ripped from pinch)

POE v1.5 is the latest correct? I must say the \$85 pack is a bargain everyone should buy it I swear!

ASM - October 12, 2011, 5:57 am

(Oct 10, 2011 01:15 PM)wacked3 Wrote: [\[CITE\]](#) I'd like your stealer to not only steal the things istealer 6 or backconnet does.

How about adding something unique?

RDP, Poker, More FTPs, More Browsers (Safari, Maxthon, Iron, Flock, ..), E-Mail clients, ..?

Everything ZeuS steals?

You could just search what Carberp and Quakbot steal and then try to implement these. (Even though carberps ones are mostly ripped from pinch)

Again, I am gonna say it for one more time that POE has nothing to do with iStealer and its nothing like darkcomet. iStealer is an outdated project , which means that it steals only old versions of those software , while POE steals everything. Same thing exactly applies for darkcomet, darkcomet's main function is not even a stealer. So no, it does not only steals the things that istealer 6 or darkcommet does.

Will PM you.

Vipe® - October 23, 2011, 3:56 am

Is this 100% FUD?

35 dollars is so expensive for a small stealer that has only one option. (to steal...)

No binder, no file pumper, no downloader, no startup option...

Falconw0w - October 23, 2011, 4:46 am

no stealer is FUD.

Also stealers cost around that much only.

It basically depends on what it steals.

You don't necessarily need that. Just RAT them, and then drop it on their PC and execute it. No need for binding, downloaders or startup... startup especially... because its a stealer, once it steals, thats it. Doesn't need to keep running/run again.

I bought this and it is great and easy to use. I love it!

MacRecon18 - November 5, 2011, 11:38 am

just got my copy from the giveaway i won :)

id like to give a little review of what i have experienced so far with this product.

What is steals : the wide range of things this stealer will steal is great, i think better then any other product currently being sold at hackforums which is a huge plus++

easy of use : the product is incredibly easy to setup, even a baby could do it. this product comes with picture tutorial on how to setup this product with PHP and free hosting so you can literally start spreading as soon as you buy, and trust me im not the best at setting things up but this was EASY AS F**

price : even though i never paid for this product (because i won it) the price is very low for a stealer like this, if i didnt win this product i would buy it myself.

improvements : i think maybe there could be a bit more options in the php option, for example right now i can only see " App Name Sitename Username Password".. maybe computername ect would be better also.. but then again there might be options to enable that, i just havnt looked well enough right now..

would be great to see minecraft stealer included for those who want to get those, maybe a steam username stealer ect..

overall i think this is a great Stealer, i like how you can send logs to emails aswell as PHP, i think anybody looking for a stealer should definitely consider POE.

as far as stealers go right now, id rate this 9/10. the only thing letting the product down in my opinion is its php layout, its pretty ugly..

sorry for bad grammer, im in too much of a rush to take care of it all.

peace
MacRecon

Tell me, what about opera stealer and steam user stealer?

NewGeek - December 2, 2011, 4:15 pm

I think this has the same issue as iStealer atm, doesn't steal latest browsers as it claims to. On some logs you'll see it retrieves only username and uses it as the password as well.

I can post screenshots if you don't get what I mean.

?Hacker™ - December 2, 2011, 10:30 pm

I get an error with istealer if anyone knows how to fix it... It says error license or something. If I can't fix iStealer I will just get this instead... :(
