Thread: [Keylogger to use for infection at school? \(somewhat urgent\)](#)

One Who Flies - September 28, 2011, 3:14 pm

This is quite urgent, since I have the ability to plant a file freely for the next two days tomorrow at school, and just that one day.

Since my school blocks GMail access (unless you go through Google Docs) and most e-mail providers, how would I get a keylogger that could get me the information remotely?

Are there any loggers that could upload logs to like a text file? (I have a website with unmetered webhosting.. and I require something better than a stealer.)

Mr. Tycoon - September 28, 2011, 3:50 pm

Attach it to a USB? Might work like that.

shorty25855 - September 28, 2011, 3:53 pm

^^ Yeah but you might wanna be careful those computer tech's are quick to catch on to that stuff.

Heroicis - September 28, 2011, 4:05 pm

Very simple my friend.

- 1) Use my guide on Rinlogger. It's an amazing keylogger.
- 2) I would recommend to simply text yourself/write down a shortened url on a download link or on your notebook/phone etc. And just download it and run. Or disguise it as homework. (USB SPREAD)
- 3) Set it to send you strokes every 2 hours (You can get them to your phone)
- 4) You should be able to grab your teachers edline password (LOL)

Pm me if you need help :)
