Thread: [SLH Is NOTHING.](#)

[H]ell - September 29, 2011, 7:16 am

Alright, this is really, really starting to piss me off.

The user: [• » ? ? ? \(0\) ?« •](#) is claiming that he found a new type of exploitation.

He called it, SLH. Now he puts all these complicated bullshit in fields, and submits it.

Problem is, the string he is submitting, and claiming that it does something malicious, is the same as a kid hitting his head on the keyboard, and submitting it.

As he explains it, he submits the 2 different strings, getting 2 false login messages, than he presses backspace 2 times, (goes back 2 pages) and BOOM error message is gone.

Wonder why it is gone? Because the document got loaded from the cache of the browser.

THAT is why it is gone, this isn't some mysterious malicious attack, this has nothing to do with the strings he had put in.

Please, stop vouching in his thread, giving him credits, he is selling you guys air.

Let me give you some examples:

Code --*92c6e--* Croos_script cont fro.m 2 asp _*html l=0He tells you to enter that as username, that isn't even anything.

It's just some made up fantasy shit.

Code {pill 5ex358e 0x994846538585.6}THIS doesn't mean anything, what the fuck are you talkin gabout. Random numbers and letters that's what it is.

Code byp_ill_ip_chit ban echo@offAnd if you want to make users believe you can execute Batch on a LINUX server, make sure to put it in the right order, @echo off.

H-Star - September 29, 2011, 7:21 am

Warv0x - September 29, 2011, 11:37 am

This guy is so vast legit! He watched Hackers '95 and Die Hard 4, a little bit of DEFCON and came over here to share his massive amount of knowledge. I mean just read his comments/threads, they radiate intelligence and knowledge....

P.S: In case you're too retarded to understand (and you mostlikely are), I'm commenting over the "imadeuprandomtermsaboutsecurityvectorsthatdon'tevenexist" guy.

shanker - September 29, 2011, 12:51 pm

He's seriously selling such and people are idiotic enough to buy it? My god ..

[H]ell - September 30, 2011, 12:44 am

I can't believe that this user isn't banned yet.

All he posts is fake bullshit, thinking he hacked something.

For example: <https://hackforums.net/showthread.php?tid=1772390>

He claims to have found a unsecured admin login.

Well, whoop the fuckign doo, you just went to a demo page of a website, where they show you the admin side of the website, openly.

Davidz123 - September 30, 2011, 3:56 am

My little cousin could make a SLH-esk code. She just needs to slam her hands on a keyboard.

Whoever Haxor is, is definitely trying to mislead a lot of HF users into believing something like SLH exists. It may exist in the future if someone develops a new kind of Hacking methodology but it doesn't exist now and all the examples and reasoning this SLH gentleman has provided makes him look like a bigtime joker and potentially misleading.

Also I notice quite a few other members participating in the same gameplay, making it appear as if this is a group thing, possibly planned and organised by a group here on HF itself(just a speculation).

In any case, I strongly back this thread.

Cheers and Regards :)
