Thread: [DarkComet - User executed RAT but not showing up in my connections list](#)

Big Baller Shot Caller - September 30, 2011, 4:35 pm

I gave it to a victim to execute it he did and then now I open up Darkcomet i don't see any connections. I also executed this and its not showing me in there. Whats the problem and how can I fix this?

Scanta - September 30, 2011, 4:40 pm

chances are you didn't port forward correctly

I tested the network and it was green!! Well i'm using PROXPn so I don't think I need to PF.

Scanta - September 30, 2011, 4:46 pm

if your using a rat you need to PF, are u sure you tested the correct port? double check your router and possibly turn of any fire wall / AV

Okay, what port do I need to forward?

Scanta - September 30, 2011, 5:54 pm

you should have specifed a port when you setup your rat, go back and check

Okay thanks. When I port forward should I do it while connected to VPN or not?

Scanta - September 30, 2011, 5:57 pm

do it after disconnecting, then reconnect and test when you've done it correctly

Big Baller Shot Caller - September 30, 2011, 6:06 pm

Well thanks the port is forwarded but I executed it as well as my victim and I cant see either of our connections. I'll look into this

Scanta - September 30, 2011, 6:07 pm

can you tell me what port you selected?

Big Baller Shot Caller - September 30, 2011, 6:11 pm

I used port 1604. And i'm in DarkComet right now, when I tried using my VPN (which changes IPs every restart) or without a VPN no users show up.

AyyLmao0o - September 30, 2011, 6:12 pm

I used to have this problem, It's either your settings are incorrect or most likely because your ports are not forwarded.

Big Baller Shot Caller - September 30, 2011, 6:13 pm

Port 1604 is forwarded, unless there are other ports I must use. And i'll double check my settings and remake my rat and execute it.

Theres your problem, you need a static IP to forward to

Big Baller Shot Caller - September 30, 2011, 9:44 pm

Thanks guys I finally got it and 4 victims in the process.

?Hacker™ - September 30, 2011, 11:09 pm

proxpn doesnt support port fowarding anymore sadly... i got nVPN. Works great.

Eddd - September 3, 2013, 2:05 am

what was wrong with it? could you please respond, cheers
and how did you fix it*

binomial nomenclature - September 3, 2013, 2:45 am

lol maybe he lied to you, he saw right through your trap :P

Mystogan Scarlet - September 3, 2013, 4:18 am

I would say you didn't portforward correctly. Also check your firewall settings. Hope I helped! :D

El_Panos - September 3, 2013, 5:30 am

I woul like to ask something.

I use nVpn .

Is it necessary to port forward via my router or just portforward via nVpn?

Thanks,
Panayotis

Professor James Moriarty - September 3, 2013, 5:33 am

Check your client settings password make sure it matches or it won't show up

Portforward through your own router, then connect to nVPN.

El_Panos - September 3, 2013, 5:40 am

Thanks because i thought when i have the nVpn it is not necessary to port forward via router.

jajma - April 19, 2014, 3:14 pm

I have the same problem after check my router port resolve my problems now the only problems is my FUD not working

CyberHydra - January 5, 2015, 2:10 am

(Sep 30, 2011 06:07 PM)Scanta Wrote: [\[CITE\]](#) can you tell me what port you selected?I know I'm not the same guy, but I will continue this. I chose port 200, and on top of that, canyouseeme.com can see my process on port 200. I have spent hours trying to get this to work, and nothing works for me. I have tried almost everything. I can't PM, but if you want, my email is generationsgaming150@gmail.com

ZeroLog - January 5, 2015, 2:12 am

1. u need to portforward?
2. correct ip?
3. did he opend the rat really?

g_eazy - January 5, 2015, 8:10 am

Make sure the port u portforwarded is not the same u used in another program! also make sure you set up your dns settings correctly. If he really did execute it then there is probably a connection problem, i would just check if you portforwarded correctly :D

CyberHydra - January 5, 2015, 4:56 pm

Thanks for this, I thought I had portforwarded 200, but I accidently portforwarded 299 xD
Thanks for the help!

SomebodyInvalid - January 5, 2015, 6:57 pm

Have you tested your rat on your own pc? always do that first.

gxcaptain - March 13, 2015, 9:04 pm

im still having trouble guys please leave ur skype.....

when i go to canyouseeme.org and enter 1569 it says it works....

so i did Source Port(s) 1569/Destination IP or Hostname=ip4v /Destination Port(s) 1569

so i get my ip/dns from noip.com and i put it in with the port 1569
and i finalize the stub

But when i use it it doesnt display any users

i turned off my antivirus and other firewalls but it still wont work....

AlBundy - March 17, 2015, 2:36 am

Port forward and plz do not use no-ip... That program is very buggy.. I recommend duck dns

dealoox - March 17, 2015, 2:42 am

Which crypter did you use bro ?

Thanks :)

T90s - June 29, 2016, 10:39 am

I have the same problem as the forum creator and I have been trying this for hours but it is not working. Everything is forwarded fine! But I am not seeing a connection. Help please

Cirruslol - July 8, 2016, 7:28 pm

Hello, mines having issues as well. On canyouseeme it says it can see the port, but when I run the RAT on a different computer nothing happens?

KMH51 - August 14, 2016, 8:39 pm

Im having issues can someone hit me up?

zohanhacks - August 14, 2016, 9:26 pm

does no one realize this RAT IS FUCKING DEAD

Faith Connors - August 14, 2016, 9:30 pm

Or that this thread is from 2011

But that's none of my business...
