RaZa - September 30, 2011, 10:06 pm

i juts recentley learned slh from haxor and i was wondering if someone can teach me havij next. thx for spending time and readin

ThisWay - September 30, 2011, 10:09 pm

You learned the gibberish language(SLH) from that guy and you don't know how to use a simple GUI?

Oh well. Hopefully someone should help you I guess.

Cheers. :)

Just noticed something bizarre out of the blue.

On this link you say that you already know how to use SLH and you've been "using it all the time":

Why would you use such a tool like Havij?

But if you insist, here is a good tutorial:

Atheist - September 30, 2011, 10:44 pm

I might be able to help you im a SLH master bro im still lerning havij bu i got it to star up

Mathematics - September 30, 2011, 10:45 pm

Havij seems pretty self-explanatory. I don't recommend it unless you are dealing with a small site.

memate - September 30, 2011, 11:10 pm

well bro it's hard to explain how to use Havij it's complicated it's difficult it's like trying to explain final fantasy eight to a lemon hahahahaha

Well you see;

Well, he was obviously trolling, see all of the spelling mistakes aswell as grammar and punctuation? It was on purpose.

Look back a few days

First, you didn't call me dumb? Orly? <http://screensnapr.com/v/e4wnKv.png>

Second, it wasn't obvious to me as I don't stalk his posts or record his grammar mistakes or lack thereof considering there seems to be many who make them on HF. So excuse me for not recognizing the stupid troll.

he is right if u know basic sqli , example a error have been encountered and shit u can redefine your settings to make the tool more acurate. just think havijc is the same queries you do but in hex format and some tricks to w4f bypass and stuff.

bottom line u just need for sqli 3 things.

true or false ~ blind

schameta

double query injection request.

there isnt alot of more to learn.

if u refered to want learn mysql then there is alot of commands that can be usefull. but sadly a lot of the injections lack on the permissions to exec it. so u need to gain access to the box to exec this ones.

really i hack with my own hands on the keyboard so why do i HAVE TO learn how to use a skidish fucking tool unless i have to do blind injection. and no its easier done then said with havij i've used it for a few blind injections. So untill you learn how to hack manually gtfo and stop calling intra skids for hacking manually without a tool cuz they are better then you. kay? bye.

The Decoder - October 4, 2011, 8:22 am

steps:

find vulnerable site

paste it in havij

click on analyze

after u get "target is vulnerable :D"

click on tables > get tables

after this if u will get admin or user table

click on column > get columns

after columns check on username and pass.

click on get data ..get data from columns and find admin login :) simple
