~ ? VB.NET File Pumper Tutorial ? ~Written by [Unipire](#) & Soul Collector for layout

==

Step 1:

Open Visual Basic:

Click File > Then New Project > Choose Windows Application> Write name: File Pumper > Click Ok button.

Insert two Text Boxes, and two Buttons.

Double click on the Button and rename it to Browse then paste this code into it.

```
Code Dim ofd As New OpenFileDialog
ofd.Filter = "Exe Files|*.exe"
ofd.ShowDialog()
TextBox1.Text = ofd.FileName
Explanation:
```

What the button Browse does is that when clicked upon, an Open File Dialog would pop up, and the user of the program must choose an executable file they want to pump megabytes into.

Step 2:

Double click on the second Button and rename it to Pump and then paste this code into it.

```
Code If TextBox2.Text = "" Then
    MsgBox("Please put in the amount of megabytes you want to pump.")
Else
    Dim file1 = File.OpenWrite(TextBox1.Text)
    Dim siza = file1.Seek(0, SeekOrigin.[End])
    Dim size = Convert.ToInt32(TextBox2.Text)
    Dim bite As Decimal = size * 100
    While siza < bite
        siza += 1
        file1.WriteByte(0)
    End While
    file1.Close()
    MessageBox.Show("Your file has been pumped.")
Explanation:
```

When the second button named Pump is clicked upon, the program would pump megabytes into the program, if no number is placed in Text Box 2, the program doesn't know how many megabytes

does it need to pump, so if TextBox2.Text is blank, also known as "", a message would pop up telling them to put in a number.

And you're done.

Wtf? I thought this was a downloader tutorial, not a file pumper?

Woops, mixed up my third tutorial. Changing it now.

Modestep - October 1, 2011, 3:05 am

Good job, its such easy code to pump a file.

Diabolic - October 1, 2011, 8:52 am

This looks simple yet effective, thanks for posting!

Hey,

Good tut! ;)

I've tested a lot of file pumper and only the Vaxqine'one can pump a jpeg file...How is it possible ?

Raf97

g00n - December 22, 2011, 8:04 am

Hey correct the source do you miss a end if :)

I have tested on a hello world and nothing happen to the file!

This don't work for me

TheNeutron - December 22, 2011, 8:58 am

Thank you bro, I find it very useful and helpful as well, because I'm learning VB. (:

Wow aren't you so cool.

Look at the date I posted the thread please.
