Thread: [iAuth - Software Licensing Control Panel \[1.3.0b\]](#)

bourd - October 1, 2011, 3:43 am

[img]http://iauth.georift.net/skins/common/images/header.png[/img]

iAuth is a open source application licensing control panel aimed at small developers wanting to license their application without having to spend a huge amount of time creating the software to do so. Currently the control panel supports various methods of authentication for the basic license key and hardware identification to username and passwords. You can set licenses to be restricted for a specific time interval or last for ever.

Features:Hardware Identification Checking

Username/Password Login

Specify duration of the license.

Bulk License Generation

Online License Activation Page

Usable by any program that has network access.

Completely Open Source!

[Download](#) - [Wiki](#)

(Oct 1, 2011 06:45 AM)CaZzUaLLv3x Wrote: [\[CITE\]](#) why couldn't you update your other thread instead of making a new thread?

Trust me it was not my choice for it to be deleted. But life goes on. It's only a thread after all. I have made a wiki where you can learn about the workings of iAuth.

Hopefully it will help some people <http://wiki.iauth.info/>

Velocity - October 1, 2011, 9:54 pm

When will it be RELEASED? I saw 1.02 on the Github site.

xMoneyMakerx - October 2, 2011, 12:11 am

Very, very, Sexy peice of work you have here. I'll be using this for my upcoming projects.

bourd - October 2, 2011, 2:34 am

(Oct 1, 2011 09:54 PM)Reliable Wrote: [\[CITE\]](#) When will it be RELEASED? I saw 1.02 on the Github site.

Sorry about that. I've been working on 1.03 for so long it's just been stuck in my head. I hope to get it released sometime early next week.

Explit - October 2, 2011, 3:18 am

WhiteHat™ - October 3, 2011, 2:34 am

You should release a PHP code version for PHP software :)

Velocity - October 3, 2011, 6:42 pm

This is good enough temptation it's BEAUTIFUL lol

bourd - October 3, 2011, 8:59 pm

(Oct 3, 2011 02:34 AM)Temptation™ Wrote: [\[CITE\]](#) You should release a PHP code version for PHP software :)

Wait what? This is the PHP code for it.

Go to <http://github.com/georift/iauth/>

bourd - October 5, 2011, 4:00 am

Been brainstorming some new features for the next release. It should improve the overall feel of iAuth and functionality.

Nightmare Illusions - October 5, 2011, 7:11 pm

(Oct 5, 2011 04:00 AM)bourd Wrote: [\[CITE\]](#) Been brainstorming some new features for the next release. It should improve the overall feel of iAuth and functionality.

What do you have planned? and nice work iauth is coming along nicely

bourd - October 6, 2011, 4:17 am

(Oct 5, 2011 07:11 PM)Nightmare Illusions Wrote: [\[CITE\]](#) What do you have planned? and nice work iauth is coming along nicely

Not going to give too much but I've been getting some prices on a custom coded theme. Apparently it's more costly than I thought. :P

You should let us no how much. and maybe put a donations page up so we could donate towards it.

bourd - October 6, 2011, 7:06 am

(Oct 6, 2011 06:00 AM)Nightmare Illusions Wrote: [\[CITE\]](#) You should let us no how much. and maybe put a donations page up so we could donate towards it.

Nah not many people will donate. Not a very popular project right now.

BreastMilk - October 6, 2011, 3:06 pm

Why was omni saying you used iAuth to infect people?

bourd - October 6, 2011, 6:11 pm

(Oct 6, 2011 03:06 PM)Futuristic Wrote: [\[CITE\]](#) Why was omni saying you used iAuth to infect

people?

On our last thread, the one made by xDowwdeen, we were running a demo script on his hosting.

He lost access to this hosting account and someone had setup a java drive by. That's what I have been told though.

BreastMilk - October 7, 2011, 2:11 am

(Oct 6, 2011 06:11 PM)bourd Wrote: [\[CITE\]](#) On our last thread, the one made by xDowwdeen, we were running a demo script on his hosting.

(Oct 7, 2011 02:11 AM)Futuristic Wrote: [\[CITE\]](#) Oh, Ok fair enough.... Doesn't add up too me.

Yes, It confused me. I came back after a weekend away to a missing thread. I didn't see it unfold.

But I trust him not to lie to me.

Looking into RSA encryption for anyone that is interested. :)

Superman² - October 9, 2011, 11:40 am

Very nice project, I made some modification (like rc4 encrypted communication between server/client)

The only thing I don't understand is how to use the generated cookie oO

(In your wiki you say that now we can send request but don't really know what command to use)

Anyway I this is reaaally nice :)

bourd - October 9, 2011, 8:04 pm

(Oct 9, 2011 11:40 AM)Superman² Wrote: [\[CITE\]](#) Very nice project, I made some modification (like rc4 encrypted communication between server/client)

(In your wiki you say that now we can send request but don't really know what command to use)

Anyway I this is reaaally nice :)

The idea is you can use the ?action=viewnews I can't really remember if thats an actual function.

I'm writting up a better post in the wiki with some detailed instructions for all the commands in iAuth.

Thanks alot for this comment. Things like this keep me going.

Superman² - October 11, 2011, 1:20 am

Cool, and yes keep going it's a really good work ;)

bourd - October 11, 2011, 10:16 am

I bought a reseller hosting account and I'll be selling hosting for iaith for \$1 a month. It's offshore and I'll help you set up the script.

PM me if you want to buy.

xDowwdeen - October 11, 2011, 10:54 am

(Oct 11, 2011 10:16 AM)bourd Wrote: [\[CITE\]](#) I bought a reseller hosting account and I'll be selling hosting for iaith for \$1 a month. It's offshore and I'll help you set up the script.

PM me if you want to buy.
That is nice idea. Well Done

-xDOWwdeen

Velocity - October 11, 2011, 5:09 pm

BRO I offered you reseller hosting...

bourd - October 11, 2011, 6:35 pm

(Oct 11, 2011 05:09 PM)Reliable Wrote: [\[CITE\]](#) BRO I offered you reseller hosting...

I can't remember that... Sorry. But I'll also be using this reseller for personal reasons later on so I guess it's for the best.

You can buy the hosting package here: <http://tempdomains.co.cc/whmcs/cart.php> Any funds that are going here will be used to continue to develop iAuth.

Zetas - October 12, 2011, 4:39 am

Wow this looks really nice! Good luck with it.

bourd - October 12, 2011, 8:37 am

(Oct 12, 2011 04:39 AM)Kustom Wrote: [\[CITE\]](#) Wow this looks really nice! Good luck with it.

Thanks. I'm really excited about the new version I'm about to release in the coming weeks.

Marcos MC - October 12, 2011, 10:12 am

This is awesome, keep doing your good job! :D

bourd - October 12, 2011, 7:47 pm

Thanks I will. This next version has the support module Incorporated in it now.

xDOWwdeen - October 16, 2011, 2:34 am

Just finished the theme for it.

New version wont be long now :)

-xDOWwdeen

Superman² - October 16, 2011, 11:36 am

That would be amazing. Does it have any other dependencies? I'm considering having an optional

mcrypt addon but idk.

If you need hosting for your iAuth panel PM me I can give you a great deal on offshore hosting from here:

<https://hackforums.net/showthread.php?tid=181968>

If You monitor the code in auth.php, youll notice that its not the direct Encrypted pass, or hwid that you enter, it the original, theres many way to bypass it, but would require intensive editing in the way that the script works.

Ill hopefully have a java version of iAuth Complete'd and finished soon, i might wait till the new release, and then code/update the java version.

robife - October 30, 2011, 2:56 pm

I love this project, I was installing this on xampp (localhost) work fine but I got many error Can you help me!

Code First error:

http://localhost/lic/index.php

Notice: Use of undefined constant Plugins - assumed 'Plugins' in

C:\xampp\htdocs\lic\includes\init.php on line 48

Code Second error:

Notice: Undefined index: a in C:\xampp\htdocs\lic\pages\main.php on line 7

Notice: Undefined index: a in C:\xampp\htdocs\lic\pages\main.php on line 20

Code Panel Information

Notice: Undefined variable: sideBar in C:\xampp\htdocs\lic\pages\main.php on line 126

Code Warning: file_get_contents(http://georift.co.cc/version.txt) [function.file-get-contents]: failed to open stream: HTTP request failed! HTTP/1.0 404 Not Found in C:\xampp\htdocs\lic\pages\main.php on line 138

Code Notice: Undefined variable: warning in C:\xampp\htdocs\lic\pages\main.php on line 152 and so on , amazingly script work with all this error code

Thanks

Those warnings only show up when running on localhost/XAMPP. Once you have it on a real server, they won't appear :)

bourd - November 23, 2011, 3:50 pm

(Nov 23, 2011 02:53 PM)Oprah Wrote: [\[CITE\]](#) Those warnings only show up when running on localhost/XAMPP. Once you have it on a real server, they won't appear :)
They can show up on any server that has PHP warnings enabled. I'll do some fiddling around and get them removed wherever you are running it.

Hook3r - November 23, 2011, 4:10 pm

I'm defiantly not quitting it. I love this project. But I'm really finding it hard to find the time. :P

I've been trying hard to put in the hours but with so much going on I'm struggling :P

h4x - December 5, 2011, 11:06 pm

If you want someone to try and break a program that uses it for licensing let me know. I'm pretty good at cracking most software (web based, .NET, and normal c/c++ programs).

EDIT:

I'm not looking for a free copy or anything. I just thought I'd offer to help make it better, because I crack software as a hobby and I find it fun.

bourd - December 5, 2011, 11:15 pm

(Dec 6, 2011 12:06 AM)h4x Wrote: [\[CITE\]](#) If you want someone to try and break a program that uses it for licensing let me know. I'm pretty good at cracking most software (web based, .NET, and normal c/c++ programs).

If you were to look at the thread and stuff you would notice this isn't a program that will be cracked. The person who is trying to setup their software to be managed has to do all those things.

h4x - December 6, 2011, 12:27 am

-xDowwdeen

ps. Nice to see you as a UB3R now. :)

Haha thanks. I'm not really sure what I'm going to be putting into the next release. I've been coding only when I feel like it.

PayPal IPN is deffinantly in there and so is some sort of encryption.
I'm gonna be posting updates on progress to twitter @georift

Immortal - February 5, 2012, 7:14 pm

I have a question about using this in my application. how do I, also I had to fix a bug cause your sites were down so i put the version.txt on my hosting.. and re linked it.

bourd - February 6, 2012, 4:15 am

(Feb 5, 2012 08:14 PM)Immortal TM Wrote: [\[CITE\]](#) I have a question about using this in my application. how do I, also I had to fix a bug cause your sites were down so i put the version.txt on my hosting.. and re linked it.

Yeah I'm gonna get a brand new release out soon. This other one has some unfinished jobs honestly.

Here is the small description for you <https://github.com/Georift/iAuth/wiki/Authentication-Process>

praveer - February 6, 2012, 4:26 am

Can it be used for hosting purposes?

bourd - February 6, 2012, 4:36 am

(Feb 6, 2012 05:26 AM)praveer Wrote: [\[CITE\]](#) Can it be used for hosting purposes?
Sorry I don't understand the question.

Also looking for hosting for this project. If anyone can help me out PM me.

ExDamage - February 6, 2012, 5:52 pm

Nice work on the IAuth Keep it up ?

praveer - February 6, 2012, 7:23 pm

I mean as its a licencing soft, so can it be used to manage hosting accounts. Like how many people service are about to expire. Hope now I am clear :)

bourd - February 7, 2012, 3:48 am

(Feb 6, 2012 08:23 PM)praveer Wrote: [\[CITE\]](#) I mean as its a licencing soft, so can it be used to manage hosting accounts. Like how many people service are about to expire. Hope now I am clear :)

If you wrote some additional plugin then yes you could possible.

Crysan - February 7, 2012, 7:22 am

Please help me i pm'd you because iAuth websites are not working, and i dont know how to add it on my Visual Basic Application :/

bourd - February 8, 2012, 11:27 pm

(Feb 7, 2012 08:22 AM)Crysan Wrote: [\[CITE\]](#) Please help me i pm'd you because iAuth websites are not working, and i dont know how to add it on my Visual Basic Application :/
I've PMed you back. I think iAuth will have a mcrypt option to secure it more.

Empyrian - February 9, 2012, 5:11 am

I also don't know how to add this to my Visual Basic Application :(

Would like some help please :)

/ EmpE

bourd - February 9, 2012, 6:37 am

daman123 - February 12, 2012, 2:36 pm

Is this still being updated? last update was 5months ago, but that is waht github said O.o

bourd - February 12, 2012, 4:53 pm

(Feb 12, 2012 03:36 PM)ashour Wrote: [\[CITE\]](#) Is this still being updated? last update was 5months ago, but that is waht github said O.o

Yeah I've been rather busy with my personal life right now.

RyanDiamond - February 12, 2012, 4:57 pm

Looks real nice.. good job. Must've taken a while!

bourd - February 12, 2012, 5:30 pm

(Feb 12, 2012 05:57 PM)RyanDiamond Wrote: [\[CITE\]](#) Looks real nice.. good job. Must've taken a while!

It took a while at the start although lately I've been less active in this project.

Call Me Maybe - February 13, 2012, 10:41 am

If you need a new fresh design hit me up.

daman123 - February 13, 2012, 2:21 pm

If anyone has gottan this to work please let me know :)

bourd - February 13, 2012, 4:47 pm

(Feb 13, 2012 11:41 AM)orhunakdeniz Wrote: [\[CITE\]](#) If you need a new fresh design hit me up.

The design is only a small part of the project. I've been focusing mostly on the functionality of the panel. As this panel is only being viewed by the admin I don't think it matters if it looks bad.

sk8tavou - February 25, 2012, 4:39 am

Hello mate :) Do you have skype please :)?

bourd - February 25, 2012, 5:34 am

Listed at the bottom of the post. Add me.

Forever Alone Guy - February 25, 2012, 2:47 pm

Just checked it Out, Looks Nice to be honest very easy to use.

bourd - February 25, 2012, 6:50 pm

(Feb 25, 2012 03:47 PM)Remote Administration Wrote: [\[CITE\]](#) Just checked it Out, Looks Nice to be honest very easy to use.

Thanks, still needs heaps of work but I'm getting there.

facebookdoom - February 26, 2012, 9:53 am

Was bored and wanted to check it out, looks pretty good. Here's what I don't understand:

1.) Why is a completely new HWID being generated when updating another license field? That doesn't seem logical to do. If i have a customer and add his/her HWID then I want it to remain the same value till I change it myself.

I also found a bug, unless I misunderstood how your project works, here's it:

When updating a password to a license, you are hashing the password twice.

PHP Code

```
<?php
$pass = md5($_POST['pass']);
if ($_POST['pass'] != "Password Hidden"){
$runArray['pass'] = md5($pass);
```

And thus your login part will fail. When someone requests a login you are doing this:

PHP Code

```
<?php
$pass = md5($_GET['pass']);
```

Which obviously won't work since it has been hashed twice. I'll check it out more later, so far pretty solid work!

bourd - February 26, 2012, 5:21 pm

(Feb 26, 2012 10:53 AM)facebookdoom Wrote: [\[CITE\]](#) Was bored and wanted to check it out, looks pretty good. Here's what I don't understand:

Jhawsh

I shall after my exams. That should be in 4 or so weeks. I'll have a break mid way through and I may start again.

#1 on the list of things it to get a VB.NET class released. That'll help hugely.

bourd - August 2, 2012, 3:15 am

Well it's after the exams. More than 4 weeks I know sorry guys.

I'm going to start again developing this, hopefully. I have looked at the code and to me it looks like a fucking mess. So I'll probably have some massive development to do on it.

May start by getting the API much easier for applications to interface with. That seems to be the biggest issue.

If you are good with VB.NET or application programming that would require licensing. PM me. I need some development for some class files for these languages and myself being a PHP coder I'm not spectacular.

what else? - August 2, 2012, 10:04 am

Quote: I am working on developing a template's system for iAuth so anyone can go in and edit the themes to their liking with minimal HTML knowledge.

Take Smarty2 or gagatemplate(lighter and smaller than Smarty)

bourd - August 3, 2012, 2:51 am

(Aug 2, 2012 10:04 AM)Napster™ Wrote: [\[CITE\]](#) Take Smarty2 or gagatemplate(lighter and smaller than Smarty)

Thanks for the suggestion. I've given up on doing the template system, or put it on hold, while I work on more important issues. Since well there is no point going through all the effort to make it look nice if no one is willing to use the API since it's too complicated.

Police 10-13 - August 4, 2012, 9:25 pm

Ok, so now that I have downloaded it! How do you exactly use it?

Is it an Auth for vb programs or what?

bourd - August 4, 2012, 9:49 pm

(Aug 4, 2012 09:25 PM)Jax Teller Wrote: [\[CITE\]](#) Ok, so now that I have downloaded it! How do you exactly use it?

Is it an Auth for vb programs or what?

Yes it can be used for vb programs. Basically you upload iAuth to you're hosting and then you can make requests to it on weather the user can use you're application depending on their HWID or username and pass.

I'm going to work on it more later. Clean it up a bit.

Thanks for supporting iAuth. :)

Police 10-13 - August 5, 2012, 3:28 am

Looks like an epic & mad script if you ask me, but don't really know how I would use it in vb :(haha..
I'm still just learning vb

If my paypal account wasnt closed I would donate ;)

bourd - August 5, 2012, 4:57 am

(Aug 5, 2012 03:28 AM)Jax Teller Wrote: [\[CITE\]](#) Looks like an epic & mad script if you ask me, but don't really know how I would use it in vb :(haha.. I'm still just learning vb

Thanks man, Basically if you can view the source of a webpage in VB you can interact with iAuth.

You can pass information in the URL like: auth.php?a=activate&user=username&pass=password

Once you have tried viewing the source of this page you'll get a response such as:

SUCCESS

FAILED

Right now it's a mess but I'm tiding it up.

Police 10-13 - August 5, 2012, 5:16 am

Alright sweet, Ill give it a try when my internet isn't as slow as fu*k haha..

Do you have msn mate?

I was learning PHP for a while like 2 years ago, gave up cause I wasn't in a stable house, and kept moving so I stopped! wouldn't mind learning again though.. there is a free script called UserCake .. I rebuilt that, added tons of shit to it, then lost it all.. Not long after that I gave up PHP coding.

what else? - August 5, 2012, 6:22 am

Smarty is really simple and efficient.

+ They will have an example of the default template you made.

Doing anything yourself is a loss, People should understand and start working with Open-Source stuff.

Gagatemplate should be perfect for you, simple to use.

Take a look here: <http://gagatemplate.sourceforge.net/modules/docs/index.html>

The only problem is the doc is in French, but you should understand how it works easily

glitchgxd - August 5, 2012, 7:29 am

Software authentication can just be emulated though through hosts..?

bourd - August 5, 2012, 8:57 am

(Aug 5, 2012 07:29 AM)Wrote: [\[CITE\]](#) Software authentication can just be emulated through hosts..?

While currently yes you can. I'm working on a encryption so you don't have static responses. It's a issue that the industry has to deal with and we can only do so much. After all everything is crackable.

(Aug 5, 2012 06:22 AM)Napster™ Wrote: [\[CITE\]](#) Smarty is really simple and efficient.

Police 10-13 - August 6, 2012, 7:36 am

@ Bourd - Do you mind if I use it and fix it up myself? template etc?

bourd - August 6, 2012, 6:59 pm

(Aug 6, 2012 07:36 AM)Jax Teller Wrote: [\[CITE\]](#) @ Bourd - Do you mind if I use it and fix it up myself? template etc?

Yeah you can go use it for what ever you need :) It's open source after all.

bourd - August 8, 2012, 4:17 pm

I've got <http://iauth.info> back up. Also working on the wiki are <http://iauth.info/wiki/>

It's empty now but it'll be updated this afternoon after work.

bourd - August 13, 2012, 4:41 am

I'm adding some features that will make it more appealing too applications owners.

FaberCastell - August 13, 2012, 4:44 am

Seems nice, but what do you get from this since it's free ;o ?

bourd - August 13, 2012, 7:46 am

(Aug 13, 2012 04:44 AM)BlindFire Wrote: [\[CITE\]](#) Seems nice, but what do you get from this since it's free ;o ?

I do this for the fun of it. xD Yeah just for practice and something to do I guess?

bourd - September 12, 2012, 1:46 am

Hey guys, My time has been stretched really thin lately. But I will still be happy to maintain this software if anyone out there needs it. If you would like to use it. Then let me know and I will use that to base my decision if I am going to continue developing it.

bourd - December 3, 2012, 4:07 am

No one really wants this software but I've been bored lately and really craving coding. So, I have decided to start developing this again in my free time. Even if people dont need/want it.

You can keep updated on the github page found here:

<http://github.com/georift/iauth/>

I'm probably not going to posting in this thread any more so if you wish to keep updated follow the github page for updates.

Thanks for all the support up until this point guys I hope one day this will not be in vain and we will have a nice program to show for it. :)

Superman² - December 3, 2012, 4:29 am

Still the best open source licensing system I ever found. If I can, let me release sort of advanced version when I get time to finish it

Basicly I added rc4 encryption (communication between server & client)
"uncrackable" system instead of sending a cookie it send some unique information needed to start the software (but this will only works with software that use text as private information, but this can be easily used to set variables to some kind of things we want)

bourd - December 3, 2012, 4:39 am

(Dec 3, 2012 05:29 AM)Superman² Wrote: [\[CITE\]](#) Still the best open source licensing system I ever found. If I can, let me release sort of advanced version when I get time to finish it

Nice to see that name. :)Just saw that you're still active on the board ^^

Yea so it was an error when changing password, I was questionning myself with that bug since lots of my clients were having trouble when I also wanted to change only the hwid.

I'm really not working on it anymore atm but I'll pm you soon with the mods I did !

Blxnco - December 21, 2012, 3:40 pm

Well, this looks like a nice simple licensing system. I'm going to be using this!

bourd - January 3, 2013, 3:06 am

I'm on holidays guys, sorry for not letting anyone know. I'm in a remote area and will get back too you soon.

NoahTM - January 3, 2013, 1:03 pm

I've also had an ID SQL error when trying to edit a license something about the ID not Beeing corrspondent eight the DB

bourd - January 4, 2013, 7:02 am

Would you mind taking a picture of that and sending it too me? What page was it? Could you give me the values in the database that is causing the error?

Thanks. If you could PM me these details I'll look into it.

bourd - February 17, 2013, 11:32 pm

As it turns out godaddy thinks the name iauth.info had some value to it, so when I didnt renew it they held onto it.

If I do any work I'll be pushing to the github. That wont be changing.

You can now access iAuth's main page at <http://iauth.georift.net/>

bourd - February 19, 2013, 2:20 am

Here is a quick update on what I'm working on:

I have changed how serials work, they now have a different form (ie. FWIWN-LHVPQ-WAGO8-6U68F-WZN36)

I have added bulk serial generation which saves to a text file.

And now you can activate the serial online and setup your username and password there, then your first login will get the HWID for them.

ManDoR - February 19, 2013, 10:26 am

It's really nice seeing you're still working on your project :)

bourd - February 19, 2013, 3:18 pm

Seriously, can't you give advice and stop writing those fucking ellipsis instead of taking everyone for shit?! I'm tired of seeing all of your posts.

rfpd - February 21, 2013, 8:04 am

Nice man :D php is awesome! BTW how did you make the graph thing? Thanks for your contribution!

2nd BTW - I will not use this but I found interesting the thing I asked for in my first btw

PigBacon - February 21, 2013, 5:51 pm

(Feb 21, 2013 08:53 AM)ManDoR Wrote: [\[CITE\]](#) Seriously, can't you give advice and stop writing those fucking ellipsis instead of taking everyone for shit?! I'm tired of seeing all of your posts.

He's right though.

This is pretty easy to crack; the best I could manage when I wrote my auth system was running stuff through SSL, and using protobuf to send objects over the tubes so it's harder to forge.

bourd - February 21, 2013, 11:24 pm

Yes, it's pretty damn easy to destroy this thing when it comes to protecting applications, but like the first post says. This is free software and just something I am doing for fun, sooner or later I will sit down and get around to making the thing slightly harder to bypass.

But I think I could put my effort into improving other things first, it would be nice however to hear some suggestions on what I could do to prevent it being bypassed. My initial thought was RSA encryption with the keys randomly generated by the client on runtime.

(Feb 21, 2013 09:04 AM)rfpd Wrote: [\[CITE\]](#) Nice man :D php is awesome! BTW how did you make the graph thing? Thanks for your contribution!

2nd BTW - I will not use this but I found interesting the thing I asked for in my first btw

That's the Google Graph API. It's pretty neat but not as nice as something you would pay for, which sadly I cannot put into an open source product.

bourd - February 25, 2013, 1:06 am

The Github page now contains the latest version, would be best to download it from there from now on.

Things I have done:

- Serial Registration Page
- Fixed HWID not being checked bug.
- Fixed serial registration using API
- Added functions that can be called during an IPN purchase to generate a serial.
- News Function.
- Version Control

I will be updating the wiki soon with a better front page.

Duk3 - February 25, 2013, 9:26 am

Look pretty nice OP. I hope I would get the chance to use it one day

PigBacon - February 25, 2013, 2:45 pm

What I did was have the server generate a key pair; the public key goes to the client, server holds private key.

SSL, catch invalid certificate errors; we all G!

And like I mentioned, protobuf is good since it makes tampering with stuff via MITM much more of a pain in the ass.

Thanks for the tips, I'll look into it when I get some time. I won't have too much time these next few days since I am going out of state for a week.

I have updated the wiki with a much better explanation of what iAuth actually is for those who are confused.

http://iauth.georift.net/index.php?title=Main_Page

bourd - September 27, 2013, 8:12 pm

Again, after a long delay I'm going to be doing some more work on this. Basically now I'm going to try and get iAuth in to a better workable state to give people a chance to actually use the software.

By far the biggest issue I can see with this software is the documentation on the authentication system. So I'm going to be focusing on standardizing the system in my head and then put that down on paper and get it all setup in the wiki.

bourd - October 10, 2013, 1:35 am

So progress is being made on getting the authentication system cleaned up. I'm basically just fixing things as I see them, goes to show how crappy I was a year to two years ago.

I need to find some diagram software that will help me actually convey how the system works so if

anyone has and ideas about that please send me a PM.

I'm going to be updating the wiki with a todo page, and whats being currently done and who is doing it.

Besides that nothing new. Good chat team. xD

EDIT: Here is the TODO page I was talking about: <http://iauth.georift.net/index.php?title=Todo>

_NeTwork - October 15, 2013, 2:20 am

<https://gyazo.com/52e4e4f2048493a91c06f1b868128ff9>

O bugger..

bourd - October 15, 2013, 6:26 am

Can you give me a little more information about where you are getting this error and what you did to get to it?

If you check error_logs on your server it will also shed some light on what is causing the issue.

Thanks.

Pentatonic - October 15, 2013, 6:51 am

Looks promising and well-coded! I thing that a better design will improve the whole idea, try to play a bit with the borders and change the logo if you want. I can't give any PHP related advices as I haven't look the source yet. Keep up the good work!

bourd - October 15, 2013, 7:31 am

Thanks for the comments. Sadly, I'm not designer, so the design/logo is lowest on my list of jobs to do.

It will be addressed in due time though.

bourd - October 17, 2013, 9:50 am

Got a heap of stuff done today, skipped 1.2.2+ since I spent so long away, now we are at 1.3.0a and my plan is to have it in decent working order by 1.4.0.

Right now, auth.php is workable, I just need to document it. jqplot has been added to the settings for a graph option. Stats can be sent to developers if you want to. Applications now no longer have to have a user/pass login. Applications now have a decent editing window.

_Spy - October 17, 2013, 5:02 pm

This is one of the best initiatives ever that've seen till now on this board .

What can I say you did a pretty good job Good Luck developping it more.

Sm1th???? - October 17, 2013, 6:53 pm

Looks awesome, thanks for the contribution.

bourd - October 17, 2013, 11:06 pm

Thank you very much. My hopes is for greater uptake of usage, so then atleast I'll have people pestering me to develop it and not just forcing myself.

(Oct 17, 2013 06:53 PM)MrxxMrsSmith Wrote: [\[CITE\]](#) Looks awesome, thanks for the contribution. Again, Thanks :)

I've fixed a small bug in the code that was causing login to always fail if the licenses didn't have an expiration set to it.

I've also finished a very basic copy of the Authentication documentation.

<http://iauth.georift.net/index.php?title=Authentication>

Superman² - November 15, 2013, 11:32 am

Hey, I didn't use iaauth for a long time, nice to see updates ! :D

I'm having trouble with session hash not deleting when I attempt to reconnect for example:

I auth myself

Hash code generated

I use it to get appNews

I close software

I re-auth myself

Generating a new hash without deleting the old one

Any idea why it isn't working, or somebody with the same prob ?

Can't figure out myself in phpcode I'm not enough good for that now :/

bourd - November 17, 2013, 3:45 am

I've been recoding the whole authentication process with some pretty good progress in my mind.

Are you running the latest release that you are talking too?

The appNews feature is not fully supported honestly. I need to get someone with an application/experience with client side programs to help write some classes to authenticate.

I'd like to help you with your issue, whats the version you are running?

(Nov 15, 2013 12:32 PM)Superman² Wrote: [\[CITE\]](#) Hey, I didn't use iaauth for a long time, nice to see updates ! :D

Hey just doing a bit more reading on your issue, while I never intended for the application hash to be deleted, I think that maybe it would be a better idea to do so. Simply because the user could use

the old application hash while it was still within it's allotted time.

Thanks for pointing this out. I'm looking into you.

--

EDIT:

Even more reading done, turns out the update statement that is meant to force all previous license to expire was not actually running. I've fixed this now, and changed the inactive state of the application session to expires="-1" this is far more obvious that it's actually been canceled. I'll be pushing these changes soon.

curtis2013 - November 18, 2013, 6:13 pm

Great little application that you've put your time into here, I'm going to use it for my own project for licensing but I'll be rewriting with mySQLi or PDO, as benchmarking against the both proves mySQLi is a litter faster and a lot safer

thegentlad22 - November 18, 2013, 6:38 pm

OP did you use JQuery for the calendar? Also are the tables using HTML tables?

bourd - November 19, 2013, 4:19 am

Haha, thanks. Yeah I've never really adapted to the newer versions. I'm being stubborn but I know I should really move up to it soon. I've used a class for my MySQL database access in most places but I've gotten lazy and haven't always used it. If I went though and wrote a port for the newer ways I think it'd plug in quite nicely.

If you are going to use it for a project please keep in touch email me at geo@georift.net I'm always interested in comments about improvements. People using it gives me the drive to continually improve it.

(Nov 18, 2013 07:38 PM)thegentlad22 Wrote: [\[CITE\]](#) OP did you use JQuery for the calendar? Also are the tables using HTML tables?

I used jQuery for the calendar and Google graphs API for the main graphs. And yes, plain old HTML tables with a little bit of CSS for the zebra striping, it's old and doesn't look the nicest but it works and that is what matters.

EDIT: Also I pushed the lastest bug fixes to the github. 1.3.0b is what is currently the latest.

thegentlad22 - November 21, 2013, 10:42 pm

EDIT: Also I pushed the latest bug fixes to the github. 1.3.0b is what is currently the latest. That is what I thought. You did a good job. I asked about the tables because from most people that I run into they always suggest to use div's instead of tables even for displaying data in tables. Still the app doesn't just look neat but looks well prepared. I seen people try and use graphics and different colors and end up making the text hard to read. So, you done a good job!!! ? however, I have no use for it. Keep up the good work. ?

bourd - November 22, 2013, 2:09 am

Yeah I know there are many people out there who absolutely hate the idea of use of tables. For the actual layout I used the 960.gs system, not sure if that's what you meant. But I do like my use of tables for displaying data.

Thanks a lot for the comments. I really should sit down and get some solid development going on this.

Reliable - November 22, 2013, 6:02 am

Holy shit you're still maintaining this? Lol I remember when you released this bro. Dedication man. Nicely done. :)

bourd - November 23, 2013, 3:12 am

I haven't really put too much effort into it, but I do some development here or there. Not nearly as much as I would like.

Hexology - December 24, 2013, 2:36 am

This really is an excellent release, great job on this bourd!

bourd - December 26, 2013, 2:15 am

(Dec 24, 2013 03:36 AM)Hexology Wrote: [\[CITE\]](#) This really is an excellent release, great job on this bourd!

Thank you :) It's not just a release it's a work in progress. Still a way to go yet.

I'm sure this has already been mentioned but are you working to updated from mysql_* functions?

bourd - May 25, 2014, 6:59 am

Anyone who has an application they are interested in licensing please contact me, I'd love to work with you to get this project to a working level.

coolerfarmer - May 26, 2014, 12:34 pm

I wrote a class to use it in c# (with hwid, ...)

It's pretty simple but it works!

If anyone wants to use it:

<http://pastebin.com/FTDyHPkU>

bourd - June 10, 2014, 1:41 am

Are you happy for me to include this in the github repository?

I've been really meaning to work on this project again but almost all attempts to do so end up with me letting the project slide as there simply isn't enough interest.

0x03a8 - June 10, 2014, 3:32 pm

Bookmarked it, will look into this later, it looks promising

bourd - June 12, 2014, 12:30 am

Cheers for the comment Semizias.

I've decided more of the direction that I want to take with iAuth, more along the lines of WHMCS's licensing addon, maybe in the future I'll integrate some kind of client area but for now thats the main idea.

glitchgxd - June 12, 2014, 8:54 am

So.. What about emulation? I could just route authentication requests to my local machine and set up the site on xampp. Register a license for myself and I'm good?

Edit: Not trying to sound like a dick- I'm just wondering how this deals with that. I've ran into similar issues about 4-5 years ago when I was creating authentication for private hacks.

ocherries - June 12, 2014, 12:21 pm

Nice release, it looks very simple but powerful ;)

bourd - June 12, 2014, 10:32 pm

(Jun 12, 2014 08:54 AM)?È?t???? Wrote: [\[CITE\]](#) So.. What about emulation? I could just route authentication requests to my local machine and set up the site on xampp. Register a license for myself and I'm good?

Well at the moment there is nothing stopping you from doing that. But in my cases you will be fine for majority of users. I plan to, in the future, implement a public key encryption system so force the application to communicate with the correct server.

At the moment I've been flat out with university but in the next few weeks I'll be taking another look at this.

bourd - June 13, 2014, 11:34 pm

Some users have been reporting having problems with the installation script.

Please make sure you have set the correct permissions for the install directory, I would usually set it to 777 for install and has worked fine for me.

bourd - June 22, 2014, 6:33 am

Changes:Updated the Thread

Made better front page for wiki

Added todo list to wiki

Started on Getting started Wiki Page

Working on installation wizard when you first install iAuth
