No worries glad it will help you :)

And good luck with your project! :P

Very very nice dude, This has been well anticipated from me when you mentioned it ;D

Vysse - October 1, 2011, 3:42 pm

I am inexperience with COM components so I am curious how do you ship the component with your program?

Penthos - October 1, 2011, 3:56 pm

When i built the app with the component added and the .dll added to resources, it just worked..

I tested on another pc and it worked first time... (without vlc installed)

But if you would like to do the tut and uninstall vlc after to check please do, And ill update with the outcome..

Thanks Vysse.

You should use anti copy and paste pics with the source. That way skids can't copy and paste and they will learn something :)

Yea i was thinking about that but then thought, well if they just copy and paste it the only thing they will ever learn is how to copy tuts, They will never be able to code like the rest of us :P

So let them, Their only hurting themselves at the end, even more so when they come back asking for help xD, And we like Bro go read a fking book! :P

EDIT: Any Advanced Tuts Will be done as suggested tho :P lol
