DI?E - October 5, 2011, 5:50 pm

Uh oh it's dependant on .net 4? Ouch. Can you spit out the crypter on .net 2 buddy? If not so be it but it would be more effective.

any error msg apeared when changing the icon ?

DI?E - October 5, 2011, 5:57 pm

I'll try with DC 4 in a sec. I also got a few others to try out. I could be a tester if you'd like. Got enough rats it's like an infestation on my virtual environmeny. 8)

Not that I saw I will try again. One min...

Shit synfire went down for minute. Never mind I got it to crypt but wouldnt shoot out the icon.

You know of any other good scanners?

Got the icon to stick bud. Good shit. Now to scan this beast.

the crypter does need it. the crypted file depends if its originally dependent or not.

Primo1 - October 6, 2011, 5:39 am

i think that people know that vscanovirusthanks.org are one of the biggest source stealers . i'm sure milion % about that.

otherwise i'm wondering if this NEW beta version works with spynet.

DI?E - October 6, 2011, 6:34 am

I also would like to know if it works with spynet. I got 2.7 final so hopefully it works for it.

everything? Not packed with UPX? I find upx likes to trigger AVs. Havent tested the server to see if it corrupted it yet, but nonetheless, still says its FUD.
