I'm also curious to know why. This doesn't happen with other mediafire links. My Kaspersky picked this up immediately and refused connection.

Code 10/16/2011 7:18:12 AM Web Anti-Virus Detected: HackTool.Perl.Small.g (analysis according to the base of suspicious web addresses) Google Chrome http://199.91.152.146/seuhth1k2yhgtzmsm3l5d7zj864/Root+On+Server.rar//tools.rar/Mass deface tool\mass.pl

Code object is infected by HackTool.Perl.Small.g

I don't trust this. Although it seems to be detecting the actual file inside the .rar .. which makes no sense because its supposed to be an eBook.. ? ?

This guide is really good, but getting the exploit is really hard thing.
We can't get easily root exploit.

BTW, I am waiting for your next ebooks of rooting.
And thank you so much.
