Thread: [\[TUT\]FREE Tracking randomly and viewing where they go :live Tracking: \[TUT\]:D](#)

Ghost Protocol - *October 9, 2011, 11:42 pm*

This tut is first created by me, but leached to many forums..hope soo atleast i put here :(:D

Site: google.com/latitude-This is a free application where u can track ur pc, laptop and mobile. just login there and u ill be tracked freely (used to track urself live and u can put this in blogs to show where u r)

if u r login in via mobile, ur mobile will be tracked and if u r login in with laptop then ur laptop ill be tracked and they give url of u to put in blogs.

If u cannot understand then see a video of "google latitude" in youtube

This dork is not available in any site or forum or watever, since this "google latitude" application is not famous yet.

so, after reading this many people ill activate it i think.

btw i made a dork simply that shows some 20 people, after some years this application will grow stronger and u can get tons of victims.

anyways this dork is going to be leached after some months or years

Code dork: `allinurl:"http://www.google.co.in/latitude/apps/badge/api?user="`
hope all likes this
