Thread: [/\ MITM-Attack from Android Phone /\ FaceNiff_2.0_Beta2.apk Android-app](#)

Profesionalac - October 12, 2011, 4:12 pm

Hi Boys and Girl's

Maybe someone like to use it. Have fun

FaceNiff is an Android app that allows you to sniff and intercept web session profiles over the WiFi that your mobile is connected to.

It is possible to hijack sessions only when WiFi is not using EAP, but it should work over any private networks (Open/WEP/WPA-PSK/WPA2-PSK)

It's kind of like Firesheep for android. Maybe a bit easier to use (and it works on WPA2!).

*** ROOTED PHONE *** is required. Please note that if webuser uses SSL this application won't work.

This application due to its nature is very phone-dependant so please let me know if it won't work for You

Use with stock browser (might not work with other)

Legal notice: this application is for educational purposes only. Do not try to use it if it's not legal in your country.

I do not take any responsibility for anything you do using this application. Use at your own risk

Great share, mate :D As your first thread, its really commendable :D

I guess you should mention it is analogous to ARP spoofing/private (local) network cache poisoning to give a better idea to those not acquainted with Android/MITM attacks..

Also FaceNiff uses the native browser, unconditionally. Unless you've flashed a custom ROM where the stock browser has been replaced with an alternate one in the bundle, then I reckon it'll utilize the included one. (Hypothetical, only reasoning not tested)

Once again, thanks for sharing :D

Cheers,
Swiper_TrOjAn

Comments are always welcome especially those such as your Swiper_Trojan:) ...

Thank you.

Feel free to discuss about the app

Can you describe a little more detail please.

I do not know what you mean

I love facniff. I have a list of apps like faceniff that are similar or better. Check out the link in my Signiture. I have a cracked versions of Faceniff in that tutorial. Click the link "Wifi Android Hacking"

Profesionalac - *October 18, 2011, 8:16 am*

New Link for the App the other don't work anymore.

Cant Use it On Highly Secured Wifi's *sigh

motasem - *November 24, 2012, 6:33 am*

droidsheep is better and stable

faceniff got too many problems

i9300 S3

lukeskywalker - *November 27, 2012, 11:14 pm*

Can I have this sir? Thanks in advance

Poserver.exe - *December 7, 2012, 10:19 pm*

link is down. please re upload. thanksi n advance can i have this please
