Thread: [\[Release\]\[UPDATED\] WinRAR Authenticator 3.80 \(Piece of Source Included\)](#)

Gh0st-Zer0 - October 13, 2011, 11:44 am

What is this?

This is a WinRAR 3.80 Authenticator.

What is this?

It has the ability to authenticate your WinRAR Programm. Using the RarReg.Key method, no patching at all!

Can i have the source code?Why you don't post it?

Yes you can have it, if you ask it!?

Also I'm not posting the solution project here at all, because there is a paid theme of AeonHack inside.

Why there is not a VirusScann Included?

Because i see no reason wasting my time posting one!?

On the other hand if i would like to get into your Comp, i would do this without even notice it. . .even in WireShark!

So i believe that it's a matter of culture to "No posting one".

Trusted Members are trusted. . .on the other hand my personal advice is that everything you download you must run them behind a Virtual Machine! Personaly i'm Behind Kubuntu!

Since Everyone is trolling in this Thread, Here is the main idea

This key file is an example, it's not Working! Use google For a working One. . .

Code bla,bla,bla. . . .

. . . .

. . .

. .

.

File.WriteAllText('The path of the file key you wanna save in the winrar system Folder', "RAR registration data" + vbNewLine + _

"The Leechers Network" + vbNewLine + _

"99 PC usage license" + vbNewLine + _

"UID=00" + vbNewLine + _

"6412212250bfe8e73e20bdb947f60ef0da9624150bcf8668412c68" + vbNewLine + _

"84affda559742bbb686d6071302587655a7ba28d516e17834b7616" + vbNewLine + _

"47cd79a293eb4c0e4fbf5e9f967e6ed5b28a02418d0ab2549fc4da" + vbNewLine + _

"19e4644f2345190bf26ff7bcd0c819f12560b57cf28adc164a00c6" + vbNewLine + _

```
"3174fcbb69509912e7c7c4793779b941901c6c793b7319cc395ee0" + vbNewLine + _
"8bddb923fa08fc20019b59d0b246e0ac325d2e5854d4f97a602fc0" + vbNewLine + _
"a4357b8f857cfb717545410ecad088fb28a2a3cf0dff2102863273")
bla,bla,bla. . . .
. . . .
. . .
. .
.
.
```

Special thanks to AeonHack for his Theme!

*Any mentions about violetions of terms or any comments about this specific app are acceptable!
Please no flaming!
Thanks?

Penthos - *October 13, 2011, 11:51 am*
I'll be the first one to say Well Done Ghost ^^

Edit: And would it be cool for me to grab your sauce lol..

adiiforu - *October 13, 2011, 12:12 pm*
Dude why are you asking for source? He is just modifying the registry. That's it.

What you should ask is for is forbidden on hf to ask for.

I got warned you see.

Forbidden? I don't follow you, what do you mean ?

I only asked for a sauce.... not the Source :) LMFAO ..

Anyway whats forbidden?

The fact its a legal program?

ähmmmm : this have two license files ^^

?eumonic - October 13, 2011, 3:12 pm

I have a license for 4.X if anyone needs it. :P

I will not give out the solution project since there is a paid theme of AeonHack inside!
I will just give the Snippet! :D

Banks? - October 13, 2011, 3:15 pm

File.WriteAllBytes(TextBox1.Text, My.Resources.Keyfile)

Source right there ^

Gh0st-Zer0 - October 13, 2011, 3:18 pm

Source right there ^? Well key file is not at the resources! Pure string(Encrypted). . . Also why Everyone start making guess about the way??? Just ask for it, it's simple!?

Anyway thanks for the FeedBack.

Well a little snippet of the Authentication way is posted in the main thread!

Happy learning for those who will learn
and happy leeching for those who will leech!
