

Forum: [Hack Forums](#)

Thread: [RAT Spreading Tutorial](#)

Uz?i - October 15, 2011, 12:06 am

Torrents: A very common way too spread files over the net

--

P2P: A few very good example is Limewire

--

IM: If you do this mixed with a bit of SE you have a good chance of infecting the slave

--

WareZ: If you have a nice account which is trusted, start spreading your RAT

--

Personal Site: Upload a few files which are in your sites category binded with your rat

--

Membership: If you have Membership on a site, either make a fake tool and bind with your RAT, or leech

off another VIP site and share with your binded RAT

--

Java Drive-By: Don't want to explain look here <https://hackforums.net/showthread.php?tid=241754>

WareZ

In this first How-To, I will show you how too spread via WareZ (Very Easy And Basic).

But before we do that you will need to do the following:

Have a Rat

A Cryptor < Buy or Make One >

A Binder < Buy or Make One

A File too Share < Find off a trusted warez site

Now, your wondering what a Binder & Cryptor is. Well here is a quick personal definition of both.

Cryptor: You could say it Encrypts your RAT so that an AV can not find it, or say it Scrambles the code

So it seems like a unknown file too the AV.

Binder: You use these too bind 2 or more files together so that when the main .exe file is opened All the files which you binded open at once eg. You bind: file.exe > rat.exe and when you open file.exe all the files open at once.

I recommend that you either crypt the RAT first and then Bind and crypt again, or Bind and then Crypt.

Ok now lets move on. Crypt your rat and bind with the WareZ application. Now, find a board which deals with

illegal sharing of warez, here is a list I put together:

<http://www.warez-bb.org/> < Overused But People Are Retards >

<http://www.wareznet.net/> < Apparently Good Too Spread >

<http://www.sharestation.com/> < Build Trust, Get Good Post Count Then Spread >

<http://www.katzforums.com/> < Alot of Bots Are On Here >

Ok, now that you found your warez forum you want too use signup and make a good post count, it is not easy as a-b-c. I would reccommend that you get a post count of about 50+ and also get a nice looking avater and signiture, it normally makes people want too trust you. Now that you have a good looking post count you probbly want too post your binded warez in the appropriate section, but recently I have found a good way of spreading which is by posting in the guest section, and hoping that it gets put onto a site like:

katz.cd
phazeddl.com

Because 100's and 1000's of people vist these kinds of sites hourly, you got a good chance of potential victims visiting and downloading your binder warez and getting infected, but you have too make sure that your RAT is crypted or you just fucked your chances up of even getting one slave. But here is another little trick which has worked in the past for me.

Find a commonly used AV like.. Kaspersky, now find your crypted RAT with it. Now your thinking why a AV? Well this is because sometimes your victims might have done a reinstall on XP and wanted a new AV, so post it on a few warez sites and make a fake account with a nice looking post count and start too post how it works etc, also get a few friends together and get them too get a high post count and get them too post how it works! You might want too do that on all your posts with you RAT binded

Now thats it for how to spread on a warez sites. Read below for how to spread on IM (Instant Messaging)

Social Engineering (My Favorite)

Ok, now when spreading by MSN,ICQ,YAHOO you need too have trust with who ever your spreading with or some very good SE (Social Engineering). Now why SE? This helps when trying too trick your friend/slave into accepting what you are saying and downloading your file from you. So here is a good little trick which has worked about 80% of the time for me and I will share it. Also, you will need to know there personal interests which could include: Gaming,Hacking,Programming. Your probbly starting too understand what I mean, so if you don't know find out, and don't ask 'What are your interests?' say somin like ' What kinda stuff you into? i persoanlly like playing world of warcraft' . So if they say somin like 'Yeh me too' you instantly found somthing they are interested in.

What You Need:

A Friend/slave on MSN/ICQ/YAHOO etc.
There interests
A fake website which is hosting your RAT
Your Rat Cryped or Crypted & Binded with a tool they need

Ok first we need to make a fake website, this may be alot of effort for conning one person, so I reccommend
that you have a group of victims which are into the same thing, which in ourcase will be WoW (World Of Warcraft).

Find a template for what they like 'World of Warcraft'.. (Google Is Your Fried)

Now, make up some bullshit about what they like on the website. So for World of Warcraft say somthing like you have found
a talent point calculater or you found a tool which Farms Gold for you, make sure it sounds genuine and for more
proof have a couple of screenshots which you can find anywhere in google etc. Now upload your .exe too the actual
site and have it as a 10min Free Trial or somthing like that so it sounds so much more genuine.

Now for the part in which you tell them about it and how it works etc.

M = Me
V = Vicim

M> Hey i just found this sweet bot which farms gold for you
M> I just used it and it farmed some cool epics which i sold for loads
V> Nice. where did you get i from, it sounds soo cool !
V> Also cant you get banned from doing stuff like this, and is it a virus
M> No, I scanned already <Fake uploaded app link>
M> but if you get banned they have a unbanning tool on the site
M> Which removes the ban and allows you too play
M> Also i just farmed another sweet epic
V> What the site?
M> <http://site.com/download>
M> i am using the 10minute free trial! and it works like a charm
M> Planning on buying
V> Ok sweet, I downloaded it and i ran it and it opened some called Glider Bot

Ok, now thats now the best fake convo, but you probably have to go to grips of what I am trying to do here.

You can see that even though the guy said is it a virus, I give a fake link of a tool which i could call trial which could be uploaded too virus total, and he even said that if you get banned there is a tool to unban you. So you kidna understand how too get outa a hard situation

Now after all this has happened either block the slave, and move on. But you want too make sure your other
victims don't know each other because that could cause a problem for you.

Yahoo Chat Rooms: You basically go into Moonlight Way chat room as a chick with some E-Whore

pics and your RAT and they will download your RAT when they see your sexy chick

Omegle: You go on Omegle.com and just say wanna see my porn vid? Really the RAT and Pervs are always like fuck yeah.

Have FUN!

Torrents (Very Common and simple)

I got about 600 slaves in a week on this method

1. look on any torrent site for a torrent that contains a program + a serial.
2. Download it with your preferred torrent client.
3. When it's done downloading extract it if needed.
4. Go to the directory where you downloaded/extracted it. there should be 2 important files : the setup and the serial.
5. copy your BOT/RAT/VNC to that dir and rename it Crack.exe
6. Zip or Rar the setup, serial and Crack.exe and give it the name of the program and + crack (so for example : "World of Warcraft + Crack"
7. Create a torrent with the tracker url of the tracker of the website you want to put this torrent on.

Code For utorrent : <http://www.utorrent.com/torrent.php>

Code For Azureus : <http://www.azureuswiki.com/index.php/CreateTorrentWizard>

8. Upload it put a description etc.

9. Wait for people to download it and see the bots coming.

10. Do this with multiple torrents and you soon have 500+ slaves

A good website to upload the torrent to is

Code #.org

Java Drive-By (EVERYONE DOES IT)

Alright, so after you followed the tutorial and your website is ready. We will now begin the process of spreading.

The method we will be using here is the auto-surfers. If you are not familiar with them, basically they are traffic-exchange websites that automatically rotate websites in your browser.

This means that your browser will be automatically viewing someone's else website and your website is also viewed by other people.

Here are a couple of websites in which you can try to spread your website on:

Code <http://www.worldautohits.com> Code <http://www.autohittrally.com> Code

<http://www.allautohits.com> Code <http://www.libertyhits.com> Code <http://www.trafficmandate.com> Code

<http://www.trippyhits.com> Code <http://www.premiumautohits.com> Code <http://www.gethitsnow.com>

There are a lot of popular autosurfers out there. A simple google search will find you a bunch of them.

I won't really teach here how to work with the autosurfers. Its pretty straight forward and if you have any doubts just check their FAQs.

For better results make sure you sign on multiple websites. Also, don't forget to surf yourself to win credits so your website is shown to others.

Good luck and if you have any questions, just drop me a PM or leave a post.

P2P Method (Not Very Known)

Step 1 :

Power up the nameleecher
and press

menu > start crab

and now wait till it finishes.

when it finishes it shud look like this :

[Image: tut.png]

Step 2 :

crypt your server

Step 3

change icon to something more sutable (like install icons)

you can do that using reshacker or using an icon changer search for it here on hf

step 4 :

create a new folder and move your server in there

step 5:

return to the nameleecher

and press

menu > start copy > got to the location of your server > select your server > now save dialog will pop up > press save (NOTE dont copy those files in your desktop, if you do that it will create 15k files in your desktop) now you need to wait till it finishes NOTE : it will lag like hell

Step 6 :

after you finish and have your files its time to upload them to dc++

Open up dc++ > go to settings

[img]http://img828.imageshack.us/img828/8099/tut2.png[/img]

select your folder > and press OK

now your files will be hased (it will take a while)

when hasing will be complete open up a lot of hubs

Step 7:

You need to setup connection settings like shown bellow, you will need to port forward:

[img]http://img829.imageshack.us/img829/9686/settingsf.png[/img]

Make sure you press the check connection button, you should get a green message saying connection ok if not you have done something wrong or you have not port forward 411.

Now just Press Control + P i.e. Public hubs list... Connect to atleast 100 of them

[img]http://img708.imageshack.us/img708/5185/tut3g.png[/img]

In a day you will get atleast 100 victims..

A little method I like to call Sex chat.

NO REAL PORN IS ON THIS SITE!

Step 1: Have your R.A.T. server ready.

Step 2: Go to Code <http://www.megaporn.com>

Step 3: Upload your server

Step 4: Copy The Link You Got After It Uploaded

Step 5: Go to Omegle - Text or Video Chat or wherever you want to go to spread to pedos

Step 6: Do your social engineering skills to convince them to download the server from megaporn

Step 7: Wait until they download your server and enjoy them as your slave!

Good tutorial. Add some color to it, it's quite difficult to read and looks kinda messy. Plus, it will also make your thread look nicer, neater, and overall more organized.

Uz?i - October 15, 2011, 12:59 am

Alright thanks for the advice man will do.

eight - October 15, 2011, 1:00 am

(Oct 15, 2011 12:59 AM)Denial of Service Wrote: [\[CITE\]](#) Alright thanks for the advice man will do.

Try this site for some colors.

<http://www.2createawebsite.com/build/hex-colors.html>

Uz?i - October 15, 2011, 1:22 am

Thanks for that man helped me out a lot. More choice of colors :P

eight - October 15, 2011, 1:23 am

Nice job on the colors, it's just the green is a little hard to see with the grey background.

Uz?i - October 15, 2011, 1:35 am

Does that work now? :P Thanks for helping me out :)

eight - October 15, 2011, 1:38 am

Lol. Use the site I showed you. Pick lighter and brighter colors instead of darker colors.

Uz?i - October 15, 2011, 1:45 am

AHA I got it :P (Hopefully I actually did)

eight - October 15, 2011, 1:46 am

Looks good, nice tutorial. Should help many new members.

Uz?i - October 15, 2011, 1:53 am

Yeah hopefully I try to help as much as possible :)

CRT - October 15, 2011, 3:24 am

Pretty in-depth tutorials. Nice job.

Flayer - October 15, 2011, 3:50 am

Bump, Nice thread will help many beginners will link them to this thread if they ask how to spread.
Nice job!

Uz?i - October 15, 2011, 4:03 am

Thanks a lot guys it means a lot :)

CharleyisHere1 - October 15, 2011, 5:28 am

This is a very good tutorial. Thanks.

Cybergasm - October 15, 2011, 7:32 am

Nice tutorial keep the good work coming.

haunterr - October 15, 2011, 7:37 am

Nice tutorial , just 1 thing!

"* I recommend that you either crypt the RAT first and then Bind and crypt again, or Bind and then Crypt."

If you do this , chances are you might end up corrupting your server ! So ppl , test this out b4 starting to spread.

Uz?i - October 15, 2011, 1:07 pm

Alright I will fix that! Thanks for telling me.

Isolate - October 15, 2011, 6:05 pm

Amazing tutorial must have took some time :)

reggaemaniaks - October 15, 2011, 8:06 pm

Nice tuts bro keep it up and more spreading tuts from you. . Rocks!

Uz?i - October 15, 2011, 11:56 pm

Thanks guys! Hopefully this post doesn't go dead!

This took to much time to be dumped in a pile of shit! Bump

Java Coder - January 6, 2012, 2:54 am

Very very interesting to read! Will definitely use this :) bookmarked

pr0min3nt - January 6, 2012, 5:21 am

Denial of Service,

You sir made me laugh!

"Warez-bb.org overused but people are retards" well said XD

rookie397 - January 6, 2012, 5:32 am

Alright thanks for the advice it's helped me out alot

xBlackHatx - January 6, 2012, 5:51 am

Well Done Danial!

Very detailed...keep it up bro! ;)

Sysmatic - January 6, 2012, 9:49 am

Great job, I didn't read the whole tutorial yet, but just by the half of it I can see you know what you are talking about, I will read it done later. Thanks for the tutorial, might learn some new tricks.

woodoo - January 12, 2012, 3:51 am

Does it work on mac I don't know how to too it

Rock3r™ - January 12, 2012, 5:17 am

Hey mate, this thread is awesome and please correct this error Quote:Cryptor: You could say it Encrypts your RAT so that an AV can not find it, or say it Scrambles the code
So it seems like a unknown file too the AV.

Uz?i - March 24, 2012, 6:18 pm

My thread was in the dumps :(Not anymore xD

eggsavore - March 25, 2012, 9:40 am

Nice tutorial!

Like all the colors and stuff!

You very well explained it good.

preetam.kondekar - March 25, 2012, 9:45 am

this is really nice tutorial man... thanks a lot buddy... will help other members to spread their rat

Raz3d - March 27, 2012, 11:56 am

Nice tutorial mate, keep your tut's going. ;P

gekoz - April 30, 2012, 12:30 am

Great tutorial, helped me out alot, thanks!
