Thread: [\[TUT\] iOS 5, draining your battery? Have no fear, iRun is here.](#)

iRun - October 19, 2011, 3:45 pm

Everyone loves iOS 5 right? RIGHT! But don't you hate it when your battery dies within the day? YES! Okay well here, let me show you how to save your battery.

STEPS:

1. Reset you network settings: Go to Settings > General > Reset > Reset Network Settings. Wait for your iDevice to reboot.
2. Disable Bluetooth: Settings > General > Bluetooth > "OFF".
3. Disable unwanted Notifications & apps: Settings > Notifications > Turn OFF any app you don't need notifications for.
4. Disable Locations Service: Settings > Location Services > Disable the services you don't use.
5. Disable Timezone Adjustment: Settings > Location Services > System Services > Setting Time Zone > "OFF".
6. Disable Ping: Settings > General > Restrictions > Enable Restrictions > Ping > "OFF".
7. Disable Diagnostic & Usage Reports: Settings > General > About > Diagnostics & Usage > Don't Send.

I'm aware this isn't very HQ, however it works! Enjoy guys!

just asking, but for io5 on the iphone 4s, is it possible Siri is a draining battery source and if so, can we shut that option off?

iRun - October 19, 2011, 4:00 pm

AnthonyWasH3r3 - October 19, 2011, 4:06 pm

To me, iOS 5 has been a huge battery saver. Idk why.

Grin - October 19, 2011, 5:21 pm

Yeah iOS 5 is a bitch with power usage. Mainly because it's not fully opt. for the old devices. I think it's fine with the iPad two though.

iRun - October 19, 2011, 5:25 pm

Markdapimp - October 19, 2011, 5:27 pm

Just activate siri and say

Siri i know ur stealing battery and im gona let you die unless you stop it
/win

Grin - October 19, 2011, 6:59 pm

Yes iRun told menabout this thread in advance. Nice job though. You bought out the main feautres of Battery Draining.

iRun - October 20, 2011, 12:36 pm

137 Views... But no comments... come on guys! :(

Twicks - October 20, 2011, 2:57 pm

Yes, you can turn Siri off.

Thanks for this tut iRun :3

I'll definitely do some of this stuff when I get my 4S

Thanks for this tut iRun :3

I'll definitely do some of this stuff when I get my 4SI have been told that people with the 4S who try this, their battery still sucks. lol However this works tremendously on the A4 devices.

S?arlet - October 23, 2011, 12:31 pm

Thanks for this tutorial bro :) it helped a lot. Now i know why my iPhone 4S drains so fast.

iRun - October 24, 2011, 12:58 pm

Døn - October 24, 2011, 5:55 pm

This worked perfectly on my friends iPhone 4s! Nice job iRun. Thanks for always contributing :D

FeaR™ - October 24, 2011, 10:50 pm

You can turn off Siri, you have to go to settings, Siri, slide it off.

Thanks for the advice, i need a good battery

DatNigguh - October 27, 2011, 12:07 am

Man I have yet to reset my network settings, all my apps notifications on and in notification center, location services on, timezone adjustment on & Siri still on and my battery is fine with my 4s. I've read mixed reviews on battery life but I think all of them were with lower gen devices than 4s/iPad 2.

Coffee - October 27, 2011, 1:02 am

I love you man, upgraded to iOS5 today, noticed i had a crazy battery drain, followed this guide and now its draining a lot slower :D

iRun - October 31, 2011, 2:15 pm

thats good to hear coffee! glad it helped you.

fallinglove3 - November 6, 2011, 8:26 pm

Hey bro thanks i really already knew all of this but its kinda good to reasure myself that i havent been missing things for awhile.

iRun - November 7, 2011, 1:48 pm

ISO - November 7, 2011, 2:37 pm

Already made these tricks on my Iphone 4S , thanks for the share anyway !

jaydeff - November 7, 2011, 9:35 pm

Instead of turning off Siri altogether, you can just turn off raise to speak to improve battery life.

located in Settings > General > Siri > Raise to Speak off

danbirk - November 8, 2011, 12:21 pm

Nice little guide, nothing new, but still many didn't realize how much this drains youre battery.
