Thread: [Batch Music player \(lightweight music player\)](#)

Antinormality - October 21, 2011, 2:04 pm

Hey people , I am thinking about a little Project , an lightweight Batch music player since my notebook (getting new one soon!) Can't play a game and media player , media player uses about 100-150kilobytes which is alot if you only have 2GB ram.

Is there anyway to run music without using any other programm then batch? since it needs to be lightweight.

And i need a track selector but that wont be that hard just using if user input goto.. you know these lines lol. And link them to the song.

01871717 - October 21, 2011, 2:08 pm

On one computer I have 1.50 Gbs of ram.
I can run games without lag too.

GL1TCH3D - October 21, 2011, 2:14 pm

Batch in itself doesn't really read anything. If you start a program frim batch, it starts the default program for the file then the program opens the file.

If you say 'start hello.mp3', you're default mp3 player will be opened.

knew that just trying to find out if it is possible and i know batch only executes things just looking for things to do.

lets move to visual basic..

Antinormality - October 21, 2011, 3:10 pm

Code @echo off

Echo. hello %computername%

Echo. select your track :

echo.

echo. Artist Song name

echo.

echo.1.David guetta ft. Sia Titanium

echo.2.LMFAO Sexy and I know It

echo.3.The Black Eyed Peas Just Can't Get Enough

set /p input=

if %input%== 1 goto a

if %input%== 2 goto b

if %input%== 3 goto c

:a

start C:\Users\sammy\Desktop\musicplayer\song1.mp3

pause

:b

C:\Users\sammy\Desktop\musicplayer\song2.mp3

pause

:c

C:\Users\sammy\Desktop\musicplayer\song3.mp3

pause

How do i make it undependent (Now it requires my directory names to open up things)
i did not use batch for a shitload of time lost some commands , Now i need to make it independent ,
Yes i know this uses mediaplayer.

GL1TCH3D - October 21, 2011, 7:57 pm

You realize that "goto a" will start all 3 songs? Not at the same time but if you continue the batch it will.

You could try doing :

echo choose the directory:

set /p cd1=

cd %cd1%

dir %cd1% /b

echo What song would you like to play?

set /p song=

start %song%

Also, you can't run a music player because you only have 2GB of RAM? That's nuts. I had 512MB of ram and I could run my music player, browse the web, and play portal.

i am not talking about lightweight games , i got games on lowest detail etc running over 200.000 kilbytes. with skype added (about 100.000 kilobytes..)

it adds up to a mayor lagg.

GL1TCH3D - October 22, 2011, 7:22 am

I had a netbook with 1g of ram running windows 7 32bit. I was able to play songs fine and even many videos.

Antinormality - October 22, 2011, 7:30 am

minecraft + media player = lagg

Command and conquer 3 kane's wrath + media player = major lagg to freeze.

GL1TCH3D - October 22, 2011, 7:34 am

It might also depend on the media player...

GL1TCH3D - October 22, 2011, 8:25 am

Try vlc, kmplayer or UMplayer

I detest WMP...

went to the hjt , everything works faster now

HoundPup - October 22, 2011, 11:58 am

This is an honest suggestion. But a cheap 15\$ MP3 player from the dollar store and upload your music to that. Also you can e that as a flash drive and you can bring it anywhere. it is a good investment and solution.

GL1TCH3D - October 22, 2011, 2:55 pm

A cheap mp3 player will not have the same sound quality as any decent MP3 player or a computer with a sound card, no matter how bad.

HoundPup - October 22, 2011, 3:00 pm

I dont notice a difference. If u are playing it loudly then yea but if you have it at a modest volume then it is about the same.

A good sound card will blow almost any mp3 out of the water.

GL1TCH3D - October 22, 2011, 3:06 pm

Sure... keep thinking that.
