Thread: [Spreading with PasteBin](#)

jackoboi - October 24, 2011, 1:43 pm

I was spreading with PasteBin before and one of my paste's got 67 hits but no-one came up on my CyberGate... I'm not sure if that's because of they didn't download it or run it but with 67 hits 1 person is bound to download it... Is there something wrong with my CyberGate or did no-one download it...

DJ PON3 - October 24, 2011, 1:43 pm

It's a very slow way too spread, and can be affective sometimes.

Terence McKenna - October 24, 2011, 1:44 pm

No, downloads can have over 500 hits and like 10 installs

ConfidentialEU - October 24, 2011, 1:47 pm

I expect this is because of people don't trust you. Have a look in the SE section. This may help you. Also make sure your program doesn't come up on AV software.

Daredevil Amit - October 24, 2011, 2:34 pm

any other easy method..torrent also not working they instantly delete account

Misaka - October 24, 2011, 2:41 pm

Yeah lots of downloads doesn't mean lots of slaves. I made a very convincing "hack" for a game and released on a hack forum with a staff approval. >1200 downloads, about 30 installs

Mr. Fink - October 24, 2011, 2:42 pm

It's not too consistent. I wouldn't depend on it.

CRT - October 24, 2011, 3:19 pm

Just because they view your paste it's not always likely that they'll execute your server.

jackoboi - October 26, 2011, 5:36 am

ok thanks for all your help but I have a different question now, on my media fire page I have one file which has 66 downloads and another with 44 downloads but I didn't get 1 slave that night...

c00ldodo - October 26, 2011, 6:06 am

lol...
ever heard something called download count ? lookup the panel where you uploaded the server

Pirate - October 26, 2011, 6:48 am

pastebin is a good but slow method of spreading. Remember , people have to copy the download link and paste the link in another tab of their browser. Many ppl are lazy to do this and just leaving your paste. So +1 view but no download.

You can use youtube.. you will get some good results if your server is crypted. :)
