You do know that the above result shows a crypted backdoor? and it drops files?

Backdoored. Creates a folder named "Winupdt" on the system drive and drops "winupdate.exe" in it.

So is there any working worm solution? :/ I am looking for a good one for a week, but I can't seem to find any :/

jessman420 - March 15, 2012, 1:24 pm

That is backdoored with Dark Comet. The best way is to get the original source files that Nathan72389 posted and compile your own version, free of backdoors. If you can't find this source I am pretty sure that I have it, if I do some digging. Pm me and I will see.

slavage - April 12, 2012, 4:31 am
