Resellers have gotten quite a bit of bad rep.. If someone is reselling from a reputable company that has lots of reviews I don't see it as a problem.

If I'm correct NozHost was also a reseller of DotVPS for a while. Honestly I would prefer a company that has a server but I would not be upset with a reseller.

That was what I started with. I have my own servers now. My WHMCS is auto provisioned to setup that package to be put on that server. If you purchased that reseller hosting and would like to be moved to my VPS just let me know. It ain't a big deal to me. The server is located in Romania.

I have a few questions before i buy.

Are the following allowed in Unlimited Reseller Germany? :

- 1) Nulled Scripts?
- 2) Warez Linking?
- 3) What do you do if you get a DMCA Notice?
- 4) More importantly what is the REAL Uptime?

The germany server is 100% so far. Its a new server never had any downtime or ddos attack yet. Hence my words. When some prick attacks that would be the only downtime.

As for the other questions above. They are all allowed on the Romanian server. DMCA is ignored for nulled scripts. Please dont hesitate to contact us via live chat for more questions or concerns. Thank you for your interest.

Not looking too good so far. Purchased reseller account 6 days ago. Updated DNS as required. Imagine my surprise that it still doesn't resolve and the connection times out to WHM and Cpanel.

Submitted a ticket. Let's see how long it takes. Not confident based on the "while it lasted" in the two comments above this.

HaVoKeR - January 27, 2012, 12:25 pm

I've tried most of hosts here on HF and from my experience, i can easily say that this is one of the BEST Offshore hosting i've come across so far. The reasons for me coming to this conclusion?

- 1) Great Uptime! (99.9% because i've never had my site go offline)
- 2) Amazing Support and fast response times.
- 3) It's a tiny bit pricey and no discount coupons available for Shared Hosting. (You get what you pay for)
- 4) Website loads very fast!

The only thing that really bothered me with this host is their download speeds. It's not as bad as to the point where i want to move to another host, but it's not super fast either. I've only managed to get about 150 - 200 kb/s when im downloading backups or something from my site at NON Peak times. If they improve on that... i will be very happy and it will be a very SOLID hosting company.

If you don't want to take my word, please buy a One month sub and give it a go. I am sure you won't regret it.

I've only managed to get about 150 - 200 kb/s when im downloading backups or something from my site at NON Peak times. If they improve on that... i will be very happy and it will be a very SOLID hosting company.

If you don't want to take my word, please buy a One month sub and give it a go. I am sure you won't regret it.

Thank you for that wonderful briefing Havoker. Its much appreciated.

Now we are doing some maintenance and reformatting the Shared Hosting on the Romanian node. There was an error with httpd and we are fixing it right away. I am currently making a backup of all the files on the server so your data will not be lost. Thank you for understanding the situation. Please continue to bare with us as we get this resolved as fast as we can.

Yes we we're also being DDoSed this morning which has cause us some downtime. There are some immature people who like to do these kinds of things cause they don't believe in healthy competition. They just need to grow up. Sorry for the inconvenience this has caused. You will be credited for the downtime. If you have any questions about this situation please feel free to "SUBMIT" a ticket and we will answer your questions shortly.

Hax you told me you had a vps server in the uk. I only started knowing from noz around when i got banned

HaX420 - April 3, 2012, 10:27 am

A reminder to all my Resellers and VPS customers. Please make sure your clients are not abusing the server in any way. Doing so will lead to your accounts suspension as well. Please follow the terms of service. I will terminate any account that I find hosting illegal content such as Malware, Mass Mailer, Phishers and Booters.

Other then that have a great day! All accounts are instantly set up and includes SOFTACULOUS for easy script installs. Please check out XHOSTFIRE for your hosting needs. Thank You!

ahmadlucky - April 7, 2012, 2:09 am

are the prices changed now? you mentioned 1.99\$ in the title but the actual minimum plan is 2.99\$...

and somebody please give a small review on it.

Thanks

The package you were talking about does not have WHM as those are shared packages. The reseller packages on the site are not enabled at the moment. You broke tos with bandwidth eating scripts. I told said you can host the hub. You agreed to it upon purchase. You consumed more then 96% of the CPU. Bye bye.

Please submit a ticket and we will help you out. The name servers have been conflicting with other name servers on the network that has used the ip in the past. I have sent a message to my server provider to take a look.

In the mean time you can use a third party DNS resolver like Cloudflare and use their nameservers. This should help you out.

TheSonOfTheDevil - November 23, 2013, 2:59 pm

wow so after 5 days waiting all my service get suspended for no reason at all.

this has been the biggest waist ever hell even support sucks..

NOW I'LL BE TAKING MY MONEY BACK.

VERY HIGHEST RECOMMEND NO TO CHOOSE THIS SO CALLED COMPANY.

also you can't use any no-ip that say irc or its auto banned.

this is what you will be buying after 5 days...

You put the domain on the VPS as

<http://ghostirc.sytes.net.ghost.net/>

It's kind of obvious that' it's a IRC

Disrespecting any staff member will result into you getting no more support

Your past the refund deadline

Sur Justice - November 26, 2013, 11:31 pm

Same exact thing happend to me!

They terminated my service and told me I uploaded a shell -,.-.

I never did....

When I ask about it they say I am being disrespectful and if I say that again I will be terminated from thier services at all.

I would not recommand anyone to buy a host here, first they put thier services offline for more than a week, then they suddenly terminate your services, without any notice!!!!

And when you think okay this is taking me to long (down time) you see that they terminated your services.

Once you created a ticket it will take them over 5-6 hours (sometimes more) to reply with this:

"No".

Please everyone buy from another hosting service!!

But you were away for more than 7 days without any notification etc , you were online on skype & was not responding to my messages .

It very weird that a person who is owning an online business where he has alot of customers & he is earning with it , is offline for more than 7 days ?

If you really want to run a hosting company don't purchase a reseller. Being a reseller alone will crush your business. I understand how you feel. Im sure if you buy a dedi. People will give you another shot. Think about it. If HF is the only place your looking to sell hosting then you will be abused...

My family came first in this situation. I spent countless hours on the internet trying to make ends meet. My other half did not like that and we are separating. I have kids with her. Tell me how you will feel after? Keep ignoring your other half or keep doing what your doing? I been gone for say 2 weeks fixing my relationship. Id give you another full month for all I care. I run this business by myself cause everyone I have hired lacked support or did not do anything while I was gone. So shame on me. Im sorry and what else you want me to say?

We have 20 GBPS standard DDoS Protection included FREE with every plan. We also have added Layer 7 DDoS Protection up to 500 GBPS for an additional fee. Other places can be quite expensive when it comes to Layer 7 protection.

Cloudflare business plans are 200+ per month and Voxility is 300+ per month. You can get Layer 7 protection for \$20.00 per month. That's like paying for cloudflare pro but with the business protection. You cant go wrong with this deal.

If you are in serious need for Layer 7 DDoS Protection then this is the service for you. Stop over paying. If you have any questions or concerns please don't hesitate to ask.

Hi HaX,

I have very little experience in this department. However, I am currently in the process of planning and setting up a forum which I have every faith it can grow rapidly.

I will be installing phpbb at first then adding a splash page and so on.

Is the basic package for now, sufficient enough for me? Then could I upgrade in near future? Are domains provided at extra costs?

Thanks

Hello,

Yes the basic package is perfect for starting out your forums. It has more than enough resources to get going. Once you need more space or bandwidth you can always upgrade in your client area.

If you have any other questions or concerns please don't hesitate to ask.

EDIT: Yes domains have an additional fee. Thank you.

Hey HaX420,

I've ordered a webhost account.

You state that the account information is immediately delivered after purchased.

I already received all the emails with the receipts and everything except the webhost info.

Tried to talk in the LiveChat also but no response.

We have happy clients and have been Complaint FREE for the past year. We do not report post that have been made on our thread so people can't witness real problems that have occurred in the past like simple name server issues or automatic setup failures. I have been on this forum since 09 and have seen it all. If you need the best hosting provider who can meet all expectations please check us out. As you can see all my post are High Quality. Wouldn't you rather host with a more professional system admin? The choice is yours.

Orders are automatically setup after purchase. You just needed to go to your my services tab. If you check how WHMCS works every order needs to be manually accepted even after provisioning

so it does not show pending status.

If you are DDoS protected and on a 1Gbit uplink, why do you hide behind cloudflare. Are you hiding something? (Like L7 isn't completely protected perhaps?)

We are Certified Partners with Cloudflare and we use what we advertise. Why offer Cloudflare service add-ons but not use it? We use it not for the protection but for their CDN for speed optimizations for our website. The only time we use our Layer 7 protection for our site is when we are being attack so it is not enabled by default.

The protection is offered to those who need it. If you have any other questions let me know. There is nothing to hide.

Your account has been fixed and your money has been refunded. You can still use the hosting account if you need to. Sorry for the inconvenience it is totally my bad for not being more prompt with this. I was at my Grandmas funeral yesterday and was very emotional.

Without a doubt the best hosting provider on HF.

Glad its going so well bro.

Teen La Queefa - January 30, 2015, 10:16 pm

I have been using xhostfire for half a year , 3 different hosting servers and domains.

It is ALWAYS extremely laggy , not even joking , you can ping the webhost through cmd and 90% of the time you get packet loss.

I was told you're unable to ping the website directly , which may have some influence to the 100% packet loss , but it doesn't excuse the lag.

Now on another subject , my server was stress tested by multiple people at very limited strength and it was taken down immediately , every single time.

It has been hit by layer 7 attacks and the standard UDP / ssyn etc , every single time it goes offline.

If you want to experience the website lag first hand , feel free to navigate to the xhostfire website itself, it's laggy most of the time too.

I have made tickets and confronted support about this issue multiple times over the course of 6 months and they just blame my internet connection , saying "there's no lag on our end it's perfect here".

I have the exact same connection issues when connecting through my vps at extremely fast speeds.

Now either something has been set up wrong or you're lying about th 100% up time , ddos protection etc.

I wont be making another useless ticket just to be told it's my connection again , but I would like my questions and points answered.

--

Just a quick note , if you're wondering why I purchased 3 hosting packages when I wasn't happy with the service , I can easily elaborate.

Xhostfire wasn't always laggy , offline and getting ddosed.

When I first got my servers thy were fine , up most of the time , no noticable lag and support was good , but it seems quality declined as time progressed.

?Plutus - February 1, 2015, 11:28 am

Just a quick note , if you're wondering why I purchased 3 hosting packages when I wasn't happy with the service , I can easily elaborate.

Xhostfire wasn't always laggy , offline and getting ddosed.

When I first got my servers thy were fine , up most of the time , no noticable lag and support was good , but it seems quality declined as time progressed.

The lag could be caused by an attack that is on the server at the time or like we have mentioned your location to our servers in Germany. We are not 100% sure what is causing this for you. This is the first complaint about lag that we have received in a while.

The only way you would be able to have Layer 7 DDoS Protection is if your on our ddos protected IP's which cost an additional fee. That protection is true and 100% working if purchased.

If you could message me your details and confirm your account we would be glad to assist you with your problems.

(Jan 30, 2015 11:16 PM)Teen La Queefa Wrote: [\[CITE\]](#) I have been using xhostfire for half a year , 3 different hosting servers and domains.

It is ALWAYS extremely laggy , not even joking , you can ping the webhost through cmd and 90% of the time you get packet loss.

I was told you're unable to ping the website directly , which may have some influence to the 100% packet loss , but it doesn't excuse the lag.

Now on another subject , my server was stress tested by multiple people at very limited strength and it was taken down immediately , every single time.

It has been hit by layer 7 attacks and the standard UDP / ssyn etc , every single time it goes offline.

If you want to experience the website lag first hand , feel free to navigate to the xhostfire website itself, it's laggy most of the time too.

I have made tickets and confronted support about this issue multiple times over the course of 6 months and they just blame my internet connection , saying "there's no lag on our end it's perfect here".

I have the exact same connection issues when connecting through my vps at extremely fast speeds.

Now either something has been set up wrong or you're lying about th 100% up time , ddos protection etc.

I wont be making another useless ticket just to be told it's my connection again , but I would like my questions and points answered.

Still getting offline website / host randomly.

Also having the same issue with the main xhostfire domain..
Cloudflare is refusing to set up as well.

This is ridiculous...

How are clients able to order if our website is offline? Your the only one out of 100's complaining.
Our servers and websites hosted are not offline perhaps you are blocked by the firewall. Now I have messaged you to give me your info since you are unable to access our site as well. Yes this is a sign that you are firewalled. You need to provide me with your IP so I can unblock you simple as that.

Cloudflare is refusing to setup cause why? did you already sign up on Cloudflare with the email you used to sign up with our hosting? These are things you gotta think about and not just blame it on the host.

Thank you for your vouch. It is much appreciated.

We just wanted to inform everyone that we have launched a new server with a new control panel called Interworx in France. We are the only provider here that offers this control panel with our hosting accounts. We are proud to be sponsored by Interworx. Prices are at introductory rates so give it a try starting at \$1.00/month but wait if you purchase before Easter you will receive a 25% discount. That drops the rate to .75 per month recurring. What are you waiting for act now.

If you have any questions or concerns please don't hesitate to contact us for any technical or sales inquiry's.

Please find below our latest offers for DDoS Protected Shared Hosting on the Plesk 12 platform.

Plesk Hosting packages

BasicX

10GB RAID-Protected Space
Unlimited* Bandwidth
Unlimited standard features (MySQL, FTP, mailboxes, etc)
Price: \$1 per month (promo)

MediumX

20GB RAID-Protected Space
Unlimited*Bandwidth
Unlimited standard features (MySQL, FTP, mailboxes, etc)
DDoS Protection
Price: \$2 per month (promo)

Dedicated IPs available (send ticket for price and provide justification)

Why Plesk?

We admire cPanel/WHM and the functionality that comes with it but Plesk has similar power to cPanel in terms of management and features. Based on our experiences, if you love cPanel, you will like Plesk too! In Plesk you will have the following main functions:

- Wordpress Toolkit (manage your WP deployment directly)
- On-demand antivirus scanning (Dr.Web engine)
- Hundreds of applications/scripts that can be installed in a few clicks.
- CloudFlare control (through panel)
- Custom PHP version/modules and configuration
- Jailed SSH (on request)
- SSL SNI support / WAF (mod_security) control / DNS management

Anti-DDoS Details:

All our hosting packages come with DDoS protection that is capable of mitigating Layer 3/4 attacks of about 20Gbit/s size.

If you have a site that needs Layer 7 (HTTP) attack protection, we can provide a custom solution in Germany - please contact us for further details.

Location/Network:

Our Plesk platform is located in Moscow, Russia on a 1Gbps connection. The platform is hosted on a network which consists of multiple local ISPs such as TransTelecom, Megafon, RETN and various private/public peerings.

Basic Terms of Service/AUP: (please refer to our site for more detail)

- No illegal scripts, documents or processes.
- No spreading or hosting of malware and related activities.
- No pornography
- No spam or phishing
- No long-term file/backup storage applications.

Payment methods:

We accept PayPal directly or through 2Checkout (where credit cards/paypal) are accepted.

DMCA:

- There is no need to worry about DMCA as our servers are not located in United States and thus this act does not apply to your hosted sites. You can think of this as 'DMCA-ignored'.

Support:

Our hosting plans are self-managed, but if you run into a serious issue, we would be happy to solve it!

Network uptime - 99.9% (excludes scheduled maintenance and reboots) - Credits provided if not met.

DDoS Protection System:

DDoS mitigation occurs in the cloud at network level through hardware devices. Through the use of a geodistributed filtration system, traffic passes to the closest filter. This ensures the shortest route and maximum performance. Filtering nodes include Netherlands, Frankfurt, Ukraine and Russia.

The protection guaranteed is 60Gbit/s with several million packets per second. The total filtering capacity specified by our provider is over 1TB/s at 120million pps. All popular attacks targeting the webserver (HTTP, POST, GET, HEAD, SLOW etc) and UDP/TCP/SYN/spoofed are easily filtered.

Hardware and Network:

Our cPanel server runs on Intel Xeon E5-2670v2 CPUs with RAID 10 protected SSD drives. We have specifically chosen this configuration to ensure maximum performance and uptime.

Our server is connected on a 1Gbps port and is located in Moscow, Russia in the Fiord datacentre. The network has been optimised to provide the lowest possible latency in major regions. It is connected to multiple private and public peerings such as Transtelecom, RETN and Level3.

Basic Terms of Service/AUP (please refer to our site for more details)

- No illegal scripts, documents or processes.
- No spreading or hosting of malware and related activities.
- No pornography

The lower end KVM's that we had advertised on our site were for a LET promotion. We sold out within the first hour so plans are hidden now. We wont have any lower end boxes available till we receive more IP's next month or someone cancels their service. We have 3 IP's left for the larger plans. They sell like hot cakes. If you have any more questions please don't hesitate to ask. We are online 24/7 ready to assist.

Hi we are working on a new thread design for our MC services. We have upgraded the quality of our servers and we are not using the same providers as other MC host providers use. So our prices did go up a tiny bit for Minecraft. We have a 50% OFF promotion that will knock the prices down for you. If you have any other questions please don't hesitate to ask.

Looks like you were added to the new server that we have just finished setting up in Hungary. We will fix the cPanel issue. As for your nameservers it takes up to 24hrs for the domain to fully propagate globally. If you need further assistance please submit a support ticket and our agents will assist you.

That guy is just a troll.

Your hosting service is very good and I am sure most people will agree with me. It suits my needs perfectly and the support staff is very responsive to tickets. I submitted a ticket in regards to a PHP timezone issue and it was solved within minutes of my ticket being submitted. These guys do not mess around.

It's cause your imagination is limited. We have hundreds of people who are stoked about this new location on Web hosting talk and Lowend box. These can be used for VPN's etc so people are excited to add this to their VPN's

Sounds good to me. Please show me where at least 100 people are stoked. If there are hundreds (plural) then this shouldn't be a problem.

I went on Lowendbox. Couldn't find 100 different people that are "stoked". Could you give me a different URL maybe?

Also went on Webhostingtalk and saw your ads in the VPS Offers section. Not a single person replied and claimed to be stoked.

Show you? Clients don't need to comment or press a button to be stoked. We have many people ordering everyday and are happy with our services and are stoked because they get great pings. There is a high demand for this location we did our research.

You went on WHT. Who you trying to kid. Almost every post that other users post have no replies.

Anything else your wise ass would like to ask?

"We have hundreds of people who are stoked about this new location on Web hosting talk and Lowend box."

Since these are public sites, please show me these "hundreds" of people. Or do you mean I need to use my imagination and pretend everybody is stoked?

Are you trying to call me a liar? What you trying to get at here?

Those public forums you talk about is a place for advertisement you don't need anyone to comment that they are stoked. People contact us via ticket and ask us for more. We don't oversell so them waiting more shows they are stoked it's a great location no one else offers.

Our Sales show the interest in these locations read our reviews everyone is happy. Google is your best friend.

This isn't our first Seoul location. Most if not all our kvm sales come from those forums and we are a successfull business.

Use your imagination and pretend you have a successful business. Pretend people like you. Pretend you have friends. Pretend your smart as you think you are. Better yet pretend you never posted on my thread to start shit with someone you don't want to fuck with.
