Thread: [\[How to\] Optimize lockscreen themes for iOS 5](#)

Coffee - October 30, 2011, 9:32 pm

Ok so anyone on iOS 5 will realise that while icon themes work, the lockscreen strings are completely different, so does this mean we can't theme the lockscreen? Hell no!

All you need to do is open up your theme, then navigate to Bundles>com.Apple.Telephonyui

and add ~iphone to the end of each image, just before the .png so for example:

BarBottomLock@2x.png

becomes

BarBottomLock@2x~iphone.png

Hope this helps you guys

I can see coffee making a bunch of themes in the future.

Great find, and im going to try and make a them

I started iDevice theming in 2007 when i got my first ipod but got out of it when i stopped going on iDevice sites like 6 months ago

also check out my new tutorial

Yaldi :D you wont regret it mate :D

FeaR [™] - October 30, 2011, 9:55 pm

I'm jail breaking mine too, just for this. :)

Thanks coffee

Thanks coffee

Um ya lol. You know this means we really are twins xD

Coffee - October 30, 2011, 9:57 pm

Woo i've managed to convert two people just by making a theme ;) just wait till i release an actual icon theme

FeaR™ - October 30, 2011, 10:02 pm

Were twins, and coffee I'm in love with. Ha.

I'm loving his threads (Oct 30, 2011 09:56 PM)Døn Wrote: [\[CITE\]](#) Um ya lol. You know this means we really are twins xD

Glad to see you figured it out. I was trying to make a theme about a week ago, and the lockscreen wouldn't work. I was pissed. :P

Cosmo??? - October 31, 2011, 9:01 pm

Great tutorial, but maybe you could clean up the thread/make more in-depth?

b0lt - October 31, 2011, 9:21 pm

Nice! :) Looks good I will try this out!
