Thread: [Getting BSOD on new computer! Got Pic of BSOD](#)

Frankstare - November 2, 2011, 3:14 pm

I have had this PC for about 2 months now. Awesome computer but the BSODs are making me mad...

I have W7 64-bit

Hijack This log:

<http://pastebin.com/NTauGfd1>

Combo Fix Log:

<http://pastebin.com/5c10ktbw> (It deleted alot of things cause some of that was either from cybergate or cybergate)

BSOD Picture: WARNING: large image!

Spoiler ([Click to View](#))

for a more HD image go here <https://i.imgur.com/XzEu6.jpg> it is the same link, but it looks better there instead of with [IMG]

ANOTHER BSOD HAPPENED WHEN I WAS DOING THE COMBO FIX GOOD THING IT HAPPENED RIGHT AS IT FINISH! THIS BSOD IS A TAD BIT DIFFERENT... TAKE TIME TO NOTE THE DIFFERENCE I wouldn't know what is the problem causing it to do this though that's why I am posting this!

Spoiler ([Click to View](#))

As of now I do not know what else you want a scan of! Tell me what you need and I will do ALL of it!

I do Malwarebyte scans alot so... it will show up as nothing there so just tell me if you want a scan of Malwarebytes from me!

AsSaSs@iN - November 2, 2011, 5:31 pm

Warning: Combfix is a dangerous tool to run unsupervised. I recommend right now you:

Uninstall ComboFix:

push the "windows key" + "R" (between the "Ctrl" button and "Alt" Button)

please copy and past the following into the box ComboFix /Uninstall and click OK.

Note the space between the X and the /Uninstall, it needs to be there.

[img]http://i280.photobucket.com/albums/kk173/Dakeyras_album2/CF-Uninstall.png[/img]

Try this:

Click the windows 7 orb and type 'run' then enter. In the run windoe type Chkdsk /f /r to detect and repair disk errors. Restart the system before the disk scan begins on a system partition.

Info which I am working off ([Click to View](#))<http://technet.microsoft.com/en-us/library/cc957625.aspx>

Frankstare - November 2, 2011, 5:48 pm

I got this when I tried doing that. Should I still continue?

Spoiler ([Click to View](#))

AsSaSs@iN - November 2, 2011, 5:58 pm

Please continue.. Just make sure you included the /f /r

Frankstare - November 2, 2011, 6:12 pm

I did include the /f and /r here is what it did after it force closed itself!

AsSaSs@iN - November 2, 2011, 6:31 pm

Ok I have done some researching and I think this may be your best option. Follow the instructions in the opening post here:

<http://www.pchelpforum.com/memory/58877-memtest86-how-download-run.html> by Jelly Bean.

Let me know when you are done, any issues you may have encountered and how your system is running.

Frankstare - November 3, 2011, 3:04 pm

I've been running 2 for more them 12 hrs.... no errors I am still running them. should I stop? (really laggy when I am doing this because 98% of my ram is gone for now)

Spoiler ([Click to View](#))

Edit: Closed them... PC was lagging shitless and it was annoying as hell!

AsSaSs@iN - November 4, 2011, 4:53 am

Hmmmm, do you have your windows disk?

I think we should try a repair install...
