Thanks for this. Now I don't need to waste time trying to find the directories.

"SSH Locations"

SSH = Secure Shell

That is a protocol, there's no locations in a protocol. Don't you mean "Useful Memory Locations" or something along those lines?

I hope the thread becomes useful!

Avoiding the post above me.

By avoiding you mean deleting your previous post and then reposting apparently "ignoring" me?

My previous post explained what I meant by "Useful SSH locations" and I was simply moving this post to the top.

You knew all along what I meant by the title, you were just looking for an argument.

I didn't even know some of these existed O__O

Thanks a heap. I added it to my tut compilation ?
