Thread: [How to Spam a Forum Website With iMacros](#)

trazer31 - November 6, 2011, 1:38 am

This is for educational purposes only!!!!

Step 1:The fastest way to spam any forum site (or similar) is to [Download Firefox](#).

Step 2:Then Download the addon [IMacros](#).

Step 3:Now, go to the Imacros bar on the side and hit the rec button.

[img]http://www.tcij.org/wp-content/uploads/2010/01/imacros.JPG[/img]

Now everything you click or type will be recorded as a command.

Step 4:After you have done all the spamming you want, hit the stop button.

Step 5:Push play and watch the work unfold.

***Tip**

Open a seperate window instead of tab if you want to browse the web. It will constantly switch back to the spamming tab i you do not.

this is awesome man thanks for sharing this

trazer31 - November 6, 2011, 2:36 am

No problem^^

Send me a PM if you have any problems.

n31ght0 - November 6, 2011, 2:53 am

How about if the forum use google re-captcha to post on forum ???

can it bypass capcha ??

need more detail pic.

thanks for sharing ?

trazer31 - November 6, 2011, 7:54 am

Cannot bypass any capcha. This is only useful for spamming topics or posts. If it is a required capcha then it will stop the program on its on.

Nice guide, although I won't be using it would make use for does spammers ?

Ransty - September 5, 2012, 2:18 am

Thanks man, i can get my revenge on the f*cker that scammed me on a RSPS :(I payed him then he took the cash and he deleted my skype :\ I have his new forum adress, feel free to blow it up with spam guys :) <http://voltexrsps.com/forums/forum.php>

Hush - September 5, 2012, 6:06 am

thanks man, wont be using but will come in handy hopefullt
