Thread: [DarkComet "Error: Invalid IP. Invalid IP submitted is improperly formatted"](#)

jacksonleigh - November 6, 2011, 8:16 pm

so i have been reading tutorial after tutorial trying to get my darkcomet 4.0 set up and i am having alot of issues.

i cant seem to even get a start cause when i am on the "No-IP updater" tab, i cant seem to update the DNS properly. i get an invalid ip error:

"Error: Invalid IP. Invalid IP submitted is improperly formatted, is a private LAN RFC 1918 address, or an abuse blacklisted address."

i think its because in the current IP address part, it adds a 0 to the end of my ip address, which is an invalid ip.

i have no idea whats causing this error. ive forwarded my ports properly and turned off all firewalls and such. can anyone share some insight??

Any help is much appreciated

Try using the no-ip DUC

I think thats Dynamic Updater Client

but I might be wrong

jacksonleigh - November 6, 2011, 9:33 pm

i have it running already

does that mean i can skip the noip section on darkcomet?

hobo fights - November 6, 2011, 10:29 pm

make sure you have duc and also make sure that you have a valid no-ip host and don't forget to portforward

jacksonleigh - November 7, 2011, 8:22 am

I'm pretty sure I've done all those things correctly. I have duc running while I try the no-ip tab. I have my port forwarded. And I have added a host from no-ip the the way that tutorials suggest.

Is there anything I hav to set up on duc other than selecting my host?

JohnieBGN - November 7, 2011, 8:24 am

your darcomet is working fine just ignore that error

and in ip/dns make sure you enter yourhost.no-ip.org

and voala

send file to victim and you done it

Thanks! I am at work right now but i will try everything that everyone suggested when i get home. If everything fails, then I will PM you.

jacksonleigh - November 9, 2011, 5:44 pm

no luck with anything...

ultimate, i PMd you. thanks!

i zerk u - November 9, 2011, 5:53 pm

i get the same thing :S anyone help i can pay via paypal

Predator_Crack - November 9, 2011, 5:59 pm

TO ALL ABOVE...the problem is the no-ip updater that is inbuilt darkcomet. Just disable that and use only DUC to update your no-ip host. Problem solved.

jacksonleigh - November 11, 2011, 8:35 pm

how do i disable the built in no-ip updater?

Predator_Crack - November 12, 2011, 2:22 pm

BusMan - November 22, 2011, 8:58 am

>_> up ,

I have same problem too , i tried every single thing nothing works

ProHackerN00binator - November 22, 2011, 9:16 am

Use no-ip DUC

change port cuz it can be blocked like 1604 for now...

BusMan - November 22, 2011, 9:32 am

I can Listen to any port without any problem .

The problem is with Auto update thing .

smokexD - November 22, 2011, 9:43 am

Thx for this info, you guysss are the best, I so want to be one of you 1 day :D

H3xer073 - July 30, 2013, 5:11 pm

i have the same error and cannot get it to work tried multiple versions also running through netgear router everything has been set correctly i have tried all suggestions on this forum lol i really need an experts help im a quick learner if anyone knows what to do please pm me

jajma - April 19, 2014, 3:16 pm

the auto update not working correctly for DarKcomet v5.3.1
