Thread: [** \[BETA\] Napalm Rogue Builder \[Fake AV Maker\] **](#)

Xirian - November 11, 2011, 1:56 pm

Update 01/02/2012 - The first final release, 0.3 is out and it's being sold for anyone who wants it. Please PM me.

Hey yall. I've finished coding the first beta of Napalm Rogue Builder in Delphi. A fake antivirus, or rogue antivirus, is a program which alerts the user about nonexistent viruses on their system, and for the "removal", the full version is required, which users are prompted to buy. The builder can modify my rouge's name, purchase page URL, path, exe name, etc.

Tell me if you like it. :)

[Video: <http://www.youtube.com/watch?v=voudc9yjM7w>]

It's not gonna be released yet. A bit later. ?

AzureKnight - November 11, 2011, 2:09 pm

(° ? °) - November 11, 2011, 2:51 pm

Spreading Viruses?

Well, I'll tell you what every and one hacker used their rogues for so far. To get money. Scare

infected users into buying the fake software. Hardcore and stuff. I've released it to The Alliance already, and I'm probably gonna sell it later on when it's fully done.

omegabyte - December 12, 2011, 2:50 pm

Xyl is my friend. If a rogue is built using the builder, it's not my fault at all. I am not responsible for anything. If you ever want to tell me something normal, I'll be glad to have a chat with you, but till then, crawl back under your rock, kid.

Unfortunately I cannot make this builder a free release, the final version with updates will be sold for around \$50, stub included. Additional stubs will also be made, and I'll charge \$10 per a FUD unique stub.
