Thread: [\[\\$\\$\\$\]Web coder HTML/PHP/CSS/MYSQL for my unique stream site](#)

360 - November 12, 2011, 4:45 pm

Hey guys,

I'm after an all-around web coder and developer to help in establishing my website. Skills such as HTML/PHP and CSS are needed.

The basic idea is customising a php video stream script (most likely the AVS porn script - although the content is NOT porn). The website should also contain custom pages such as subscribe, about us, contact us, help, etc. As well as a main login screen before a user can see any of the video content. Users will need to DONATE/SUBSCRIBE BEFORE they can see a majority of the content. Some of the less-quality content will be free to view as long as the user just registers. It would be a plus if you also had some experience as a webmaster, and with MySQL

I have offshore hosting and multiple domains for my idea. Guaranteed with the right SEO this will be VERY popular and rake in big cash if done right. There are no sites like it, and the market for such a product is big.

As a general figure, I will most likely be paying you in 3 figures when the website is completed. And if you wish to stay on after that, the pay will probably rise.

Thank you!

I posted this over 2 months ago and I no longer need it. Thanks for the offer, though.
