For free crypting service read till the end...

Well wheres the first place all of you look in when you want someone to crypt your server? right the cryptography section. Did you know that this section is not ment for crypting services, but stricktly for crypters, encrypters, hashes and others encryption types etc..

This thread was made to cleerify that crypting services are found in the service offering section [here](#) . Know you dont have to be worried anymore becasue you cant find free crypting services in this section anymore :)

So I actually offer free crypting service if you want it please leave a comemnt here and press the loink in my description!
