Free VPN Tutorial

This is a tutorial for getting a free VPN.

What is a Virtual Private Network (VPN)

A VPN is a network that uses primarily public telecommunication infrastructure, such as the Internet, to provide remote offices or traveling users access to a central organizational network.

VPNs typically require remote users of the network to be authenticated, and often secure data with encryption technologies to prevent disclosure of private information to unauthorized parties.

VPNs may serve any network functionality that is found on any network, such as sharing of data and access to network resources, printers, databases, websites, etc. A VPN user typically experiences the central network in a manner that is identical to being connected directly to the central network. VPN technology via the public Internet has replaced the need to requisition and maintain expensive dedicated leased-line telecommunication circuits once typical in wide-area network installations.

How to get a free VPN

Step No1

Registering...

First thing you need to do is, go to [VPNReactor](#) and make a free account on there. Don't download their software, it is not needed.

Step No1

Making the connection

First go to "Control Panel".

Then click "Connect to a workplace" and then "Use My Internet Connection VPN"

Spoiler ([Click to View](#))http://i.minus.com/igN7ErwoFe7KV.jpg[/img]

Click "Next" and then fill in the box "Internet Address: vpn.vpnreactor.com" and in the "Destination Name: VPNReactor"

Spoiler ([Click to View](#))

Then on the next page you type in your account and password

Spoiler ([Click to View](#))

Lastly click "Connect" and it should connect you to the VPN.

For every other time use this icon in the bar with the clock.

The End!

F.A.Q

Question: It shows me an error and I can't connect, what do I do?

Answer: You probably have an interfering connection, it might be "Hamachi", "Tunngle" or any program like that.

How anonym is this VPN? Does it log?

John Gotti - November 14, 2011, 12:42 pm

Does this vpn have all ports open ?

I don't think you have to portforward to use it...

Seven77 - November 14, 2011, 12:48 pm

First, good Tutorial. Thx mate, im registering @ the moment

Would u say that its safe enough to use it for ratting?

they are asking because they wish too rat.

And for the record, no I do not believe this has open ports.

irameaMhoJiTo1 - November 15, 2011, 6:59 am

thank's for this tut.

very usefull.

xtraesp - November 21, 2011, 11:01 pm

Peerblock went crazy mad blocking ip's after trying this vpn so do not use it.

(° ? °) - November 21, 2011, 11:06 pm

Nice tutorial, but I tried visiting HF with this VPN and it didn't work.

In fact all VPN (and proxies) are pretty much blocked by Omni.

dakico1432 - November 22, 2011, 12:28 am

Good tutorial, but i think its better to download their software

403 - November 22, 2011, 2:14 am

nice tutorial i might try this out later.

Techie??? - November 22, 2011, 5:11 am

This is very slow in speed. But good share.

ajay - November 29, 2011, 8:50 pm

Nice... Your SQL tutorial is also impressive.. thanks for sharing..

YanM1975 - December 6, 2011, 8:14 am

Do you have to sign up with the free account or VPN Pro? Thanks.

Error 619 a connection to the remote computer could not be established.

Dafuq?

davadealer - January 8, 2013, 3:17 am

it works, how exactly does this protect my anonymity ? infosniper.net sees everything from my

location to what browser i am using ... do i have to connect through a proxy after i connected to the vpn ? kinda new at this
cheers !

SzederMike - *January 8, 2013, 5:37 am*

nice tutorial working for me! thanks

^^

Thanks for the info Myers! I'd appreciate it.

k3rn3l109 - *January 8, 2013, 10:07 am*

Does the server have port forwarded ?

alkhemet0015 - *January 8, 2013, 11:17 am*

do i need to finish the billing form to get a free account?

Chubaca - *January 8, 2013, 11:20 am*

Does it change my location if it does to where does it change it?

t0rch - *January 9, 2013, 10:25 am*

Fails on username and password, yet I'm 100% Sure I entered it in right...
Connection Failed with error 609

A connection to the remote computer could not be established, so the port used for this connection was closed.

and BTW, I don't have any program like hamachi.

Trust. - *January 9, 2013, 10:48 am*

Thanks for this. very helpful :D

thanks again!
