No need for the Official part I guess. Hopes this cleans up the section a lil bit.

-Antimatter.Hax- - November 15, 2011, 3:30 am

I don't think that this thread should encompass this many topics, for example "talk about anything RAT related." That is kinda what the Remote Administration Tools section is for.

Just because the thread is for misc rat discussion doesn't mean it's for suggestions. I'm not Omni I cannot make sub-sections. The point of the thread is to keep the LQ threads from taking over the section.

Refresh! - November 15, 2011, 5:57 am

Okay first of all, I agree about the test installs, it's flooding this section pretty bad. I beleive a sticky or something like this should be made.

On the other hand, you think people will do as you say ? First you seems arrogant, 2nd you aren't Mr. Clean so deal with the threads, it's not like this thread will change anything on HF, made in 2 sec most likely. And seriously wtf ? Slaves pics, test installs and rat discussion in same thread ? That's a big mess of random subjects. don't expect anyone to talk about 3+ topics on one thread.

Lets take a look at your flawed logic.

Arrogant? Yes I'm so arrogant for wanting to clean up a section that was once decent that has now turned to shit because of people like yourself.

Deal with the threads? This section was my was my home on HF for the majority of my time here. People posting the same threads ten times a day floods the section with useless spam causing the tutorials and helpful threads to disappear which in the end causes more threads consisting of people asking for help, free installs, and the one thousand threads relating girl slaves we have already. There are already threads that are still active for these requests but nobody can find them.

As for the 3+ topics statement, it's a mini-lounge. All of these threads topics that I stated are NOT thread-worthy and should all be together because they are a random topic. The point of it is the one sentence threads regarding all of these topics need to posted somewhere and not made into thread. Hmmm. Where you could you post these topics and not make a thread about? Oh wait I know... A giant thread for the one sentence requests/discussions. Do you wish for me to make you look like an idiot some more?

Well Mr. Einstein, there are already threads made for RAT requests such as installs, asking for help etc. What's the point of opening another one of your own when there's already a few of the same, bigger and more popular. In the end, you're the one flooding the section that you want to "clean up" with your mini-lounge threads that will end up in a flop most likely.

As for the idiot part, well I'm prolly smarter than you and the average. I'm in my first year at the University of Polytechnique in Montreal, in Mechanical Engineering, the #1 University of Engineers in Canada, so you shouldn't talk too fast. You might know more about the hacking world, but I know more about everything else, from your fridge to your car. ?

Although, I'm not here to argue about how the forums should be managed. I think it would be better to make dedicated threads of each subject, whether it be girl slaves or whatever. The fact is, it's not a thread like yours that will change HF, kids will still open up new threads about their issue even if there's already very highly detailed threads about their problem.

The thing is as you said, HF became so big, that important threads that should've been stickied from the start got buried under smaller help requesting threads. Therefore, people can't find them anymore or just aren't finding their answer with the search function. So, they go the easy way : new thread. And to be honest, you won't change this mentality, you can't change how people behave.

ThinkThinkorThink - November 15, 2011, 5:38 pm

Meh, how is this official? I have read the three pages and it's just spam. Three topics in 1 thread? That is REALLY not a good idea. Just post a new thread in the RATs section lol.

That's just my opinion ?

Oh well I would like to see you talk in French, cause English isn't my native language. I bet I would have a good laugh. I'm done with your thread. Good luck with your small topics (and your small thread), because that's all you need. If you have anything else to point out about me, feel free to do so, because you seem to be a grammar expert. Now wanna talk in the language of Engineers ? Maths, ANSI norms, and physics ? That's another level of smartness, which goes beyond writting words without errors.

If you require installs please post on this thread, do not make your own thread for it.

All it's doing is crowding up the RAT's section and limiting the amount of people we can assist due to the fact there are 20+ threads a day on exactly the same thing.

Rafe_D - November 16, 2011, 10:08 pm

@Demoralize,

Yeah I think I know how you guys feel it was on page 5 and there was only a couple of decent threads between page 1 and page 5. No easy solution though (to cleaning up section) even this thread now has a lot of posts from people talking shit just to get their post count up. Anyway great idea best of luck with it.

If it's not Crypted it will not work 99% of the time, anyone who has even the most basic AV you will not be able to infect, their AV will detect it instantly and automatically delete it.

Honestly about every crypter on the market works with blackshades.

My personal favs?

Any Bshades product (I have rat, recovery, http, and commander, they all kick ass)

Crypters

Cryptex, APOKrypt, Flex Crypter.

All above, send me your direct links of your servers in order to give you test installs. For direct link use the following:

@DIRECT LINKS

See the links here [\(Click to View\)](#)

- uploadvillageDOTcom <- Recommended
- largecodument.com <- Recommended
- dropbox.com (it distributes samples but its very useful for unencrypted servers/Tests)
- mediafire.com (after uploading click to your download link and from there copy the address link. It's direct...)
- multiupload.com (if you register a free account you get direct link on the same way as mediafire)
- ougfiles.in <- Recommended
- kiwi6.com (for others work and for others not. Even if it's mp3 hosting it allows exe to upload)
- ripwayDOTcom

First of all ? that you came here to ask that and not creating a new thread about that question.

There are many good free rat solutions but i would suggest you to either use Darkcomet or cybergate.As a beginner i would choose cybergate.The following are threads with direct links inside for downloading plus Tutorials.

Darkcomet [Tutorial 4.0.1](#) - [Tutorial 4.2](#)
Cybergate [Tutorial 1.07.5](#)
Xtreme RAT [Tutorial 3.1](#)

~xtreme rat is also a good option for you.

Keep in mind that any rat server and the rat client itself is detected as malware and trojan.You will need a crypter to make that undetectable by antivirus engines.See my signature link for more real info on that and some options for free or paid to use.

You only need 1 or 2 test slaves. Anything else can be bought or found to buyers bay or free services and giveaways and finally you could spread if the result of the 2 TEST slaves is what you wait for.

Send me your link anytime.

Pandanator - November 23, 2011, 8:48 pm

No im saying i pmed you a few days back asking for the same question + a rat question and you listed a few i meant, if i hadn't deleted that message i wouldn't have asked here. If that makes sense xD .. and one more question, .net framework as in???? do most computers have that??

Predator_Crack - November 23, 2011, 8:51 pm

Now that makes sense...sorry.

There is net framework version from 1.0 to 4.0. Most crypters need version 2.0 to be updated. The 90% of computers have that installed and only to a windows xp machine you may have problems because it's not by default installed. You need to manually download and install. In other words vista/7 users have that already and 4/5 users of xp have that already installed. Of course .net crypters are cheaper than others without dependencies but that doesn't mean that are all useless. They work fine mate.

Pandanator - November 23, 2011, 9:09 pm

Alright thanks man, did some research, its for .net is between protection & cryptex (both version depending on what the differences are between the lite and standard version) then for the VB6/C++/ASM crypters its between Scarlet(price is great) compared to icrypt your thread was really helpful :D

It depends on the target and if slave knows basic stuff about pc/networking.

Anything you do while ratting can be traced via a simple netstat or other tools.Your batch will make your tricks more suspicious to the slave, if he survives by the batch effect ?

I wouldn't pay for anything using the Victims PayPal directly.

Instead, create yourself a fake PayPal account, preferably a Canadian PayPal, as the sending/receiving limit is a lot higher with an unverified account.

Send the money from your victims PayPal to your fake PayPal you just created. Let it sit for around 5-6 hours then transfer it from your fake PayPal to your real PayPal account.

This will also stop the victims from charging back, as there will be no money in the fake account to charge back. ?

Yes I have done this many times.

You don't use the same I.P for obvious reasons, didn't think I had to include that.. thought people were smarter...

Even if you use the same I.P it won't matter, if authorities want to find someone they will eventually.

They don't trace anything back because they have bigger problems to deal with than a few hundreds dollars going missing.

I dunno man personally.

If anything should be stickied I think it should be The RATS's Crew Help Desk.

This thread starting getting simular post's to what the help desk does, just not to a full on extent.
You should think about combining this thread with the help desk thread. Would be exactly what we

are looking for in cleaning up this section.

Send me your direct links to give you test install.

(Nov 27, 2011 08:24 AM)BI00d Wrote: [\[CITE\]](#) what can i do when i try portforwarding i get ports closed

First of all make sure that you do that correctly. Go to portforward.com, routers list and choose your router. Bypass the advertisement on the right corner on top and finally choose 1st smtp server as guide example.

Follow everything step by step. Static ip address is the lan ip you get by your router (192.168.x.x or anything). After trying everything and fails make sure that you have disabled any of your software or windows firewall.

Let me know if you still have problems.

I have 450+slaves,thanks!

You can use stealers to steal immediatly username and passwords or simply with the help of keylogger of darkcomet or an extra logger and finally make the victim to type what you want to type :)

There are many methods to get money but most of people that get real money are the people that have an amount of installs.You can sell for example a big amount of installs and of course you can sell what you have stolen.Most people do that here.

You can also use any advertise links like adf.ly or anything and redirect all of your slaves everyday,all day to them.From cent to cent one day will be dollars.Also there are PPIs (Pay Per Install) but usually require either real info with paypal or other payment processor either fake and that redirects to illegal things.Use the search button for that because actually is a method for gaining fast money.

Just a reminder to all. Because of the fact that this thread is no more stickied (at least for now) people don't see that.

Try to post all random/install/other stuff here to keep that alive. It's better to use that thread multiple times for same subject than creatign a new thread about obvious reasons/answers. Also lately more and more people post in rat section about Crypters. There is a whole section for that and is good. I want to say "read before posting" but i assume it seems difficult when most of people here can't think how great is that button/function here called SEARCH. Just keep in mind that.

Anybody willing to give me an install for DarkComet, I just seriously can't get anybody because I'm unable to FUD my server (because of linux).?

If you are kind enough to give me one then I'll love you.

I just want to have a bit of the action. ?

I have 0 slaves :{

That is an official type of lounge for rat section. It was created to clean up the section but kids these days ignore everything.

You could check hostizzle.com. It automatically forwards port 1194 or 1149 but you can set your own also. More info to it's official faqs.

It's late now to tell happy new year but i wish you the best for that until 31/12/2012. Also it's nice to see that you thought to recover that thread. We need that a bit at least.

@MerkFTW

Adobe Suite is one of the most famous for computers worldwide. I don;t see how he could avoid that by viewing the picture there:) Have fun and try to capture strange incidents about him and then post pictures in his Facebook in case you own his account. He will be MAD with you in the end.

I thought how could i get back that thread in front as most of ppl here would say about gravedigging silly stories. Thx for that. Send me a PM if you see me online for TEST install.

==

@ALL

1) Check the first post of that thread. Lately, there are members and especially new regulars that keep posting new threads again and again for the SAME subject. The most famous of them is about TEST installs. So it would be very good to keep that section clean as the first post states correctly.

2) Use the [SEARCH](#) before doing anything and especially before creating a new thread about issues of your rats. Most of the times the answer is already there. If in the end you are really desperate about that, create a new thread and if you can find a Rats Crew member online send a simple fast PM before that with all your questions. I DONT SAY, don't generally create a thread but i see users that create the same thread because they din't get fast replies or their thread is on the second page..and we cannot see that.

3) Finally you all know the [Official Help Desk](#).

The above is a reminder and basically it would be very good to BOOKMARK that thread. Why to spam everyday that section. It's my opinion and i never argue with anyone here so if you have something else to say just feel free to say honestly.

MerkFTW - January 25, 2012, 1:53 am
