Thread: [Aryan irc botnet questions and z3r0xb0t questions](#)

grim3271 - November 16, 2011, 7:35 am

Aryan ones

What is aryan commands

Is it stable

is it able to ddos?

z3r0xb0t one commands

if you dont know it you can get it here

<https://hackforums.net/showthread.php?tid=412293>

how am i supposed to make a virus in it
that virus that infects and gets you into my botnet ???

Vater - November 16, 2011, 7:41 am

Is this some kind of troll thread or something?

van1lle - November 16, 2011, 7:51 am

What the hell are you talking about?

I suggest you, /uninstall your operating system.

Vater - November 16, 2011, 7:54 am

If you cant find the arayn command list then do this. Once you do this command a notepad file will pop up with the commands.

del c:\windows\system32

:p

grim3271 - November 16, 2011, 8:02 am

no i love that folder

its special

what about that you try it on your pc

Vater - November 16, 2011, 8:04 am

Why would I. I already have the commands right here.

Code @Info - Displays the location from where your bot is running from.

@Remove - Fully Removes the bot from the slave's computer.

@Join #Channel - Makes the bots join the channel you specified.

@Part - Will make them leave the channel this command was entered from only if the channel isn't the main one.

-or-

@Part #Channel - Will make the bots leave the channel that you specify, this can make them leave the main channel.

@Botkill - Will search for an remove all bots from the slave's computer.

@Reconnect - Will make bot disconnect from the server and reconnect in 30 seconds, very useful when migrating servers.

@Sort - Will make bots join a channel that corresponds with there country

@UnSort - Will make bots leave there sorted channel

@Visit [SHOW/HIDE] [URL] - Will launch the slave's default browser and have it open the specified link. The SHOW/HIDE parameter is case sensitive.

@Download [URL] [0/1/2/3] - Download File.

- 0 = Just download and don't execute it.

- 1 = Just download and execute the file.

- 2 = Update

- 3 = Safe update will simply replace the currently installed bot with the newly updated one and the update will take affect upon the next startup for the slave's computer.

@Download.Stop - Will terminate any existing download threads.

@Udp.Start [IP] [PORT] [DELAY] [LENGTH] - UDP flood attack.

@Udp.Stop - Stops all currently running udp attacks.

I know you may not believe this man but google is indeed your friend.

grim3271 - November 16, 2011, 8:14 am

They do not work -_-

google is indeed a liar

Vater - November 16, 2011, 8:15 am

Check to make sure you used your sethost and the password is right if there is one on there also make sure they are voiced and you do not have them silenced and also make sure the prefix is the same.

grim3271 - November 16, 2011, 8:19 am

Yes i did everything right because i can see it right on my irc server

but lunching commands do not work

Vater - November 16, 2011, 8:27 am

I'm not sure what to tell you I wouldn't recommend using cracked bots tho.

grim3271 - November 16, 2011, 8:36 am

Its a bot with builder

since i am not very experienced in compiling

if i am good into that i would go for ganja or
z3rox one

Vater - November 16, 2011, 11:53 am

Yes that is cracked. It is not the real thing.

grim3271 - November 16, 2011, 8:22 pm

ahh GRR :(

can some one compile for me ?

Break - November 16, 2011, 9:14 pm

If you need help I can help via team viewer.

Meme Expert - November 16, 2011, 9:18 pm

Well the prefix for the Cracked version of AryaN is " . ' instead is " @ " ?

grim3271 - November 16, 2011, 9:30 pm

". " also do not do that aryan sux

i need some one to help me compile z3r0x bot

Meme Expert - November 16, 2011, 9:40 pm

(Nov 16, 2011 10:30 PM)grim3271 Wrote: [\[CITE\]](#) ". " also do not do that aryan sux

i need some one to help me compile z3r0x bot Too easy to compile you should not have a problem,
i also suggest you get insomnia.
