Thread: [\[Must See\] | ? Wre@ked's RAT Setup Service ? | \[Free\]](#)

Wre@ked - November 16, 2011, 8:01 am

Online: YES

Why?

This is my way of giving back to the Hack Forums community, for all that you guys have done to teach me how to RAT. Know that I know what I am doing I would love to help people learn.

How Will This Work?

In order for me to set up the RAT you must have TeamViewer this is a remote administrative tool (it is safe) you can cancel the session at any time it can be downloaded here:

<http://www.teamviewer.com/en/download/index.aspx>. Through TeamViewer I will fix whatever problem you are having with your RAT etc.

Things I Will Help With

- Setting up a RAT
- Port forwarding
- Spreading ideas/guides
- Helping you spread your rat
- I may give you a few free test installs(depends)

Application

Code [b][color=#32CD32]What RAT are you using:

Time Zone:

Problem or Service Wanted:[/color][b]Rules

1. Do NOT PM me or I will not help you. I will PM you2. Do NOT ask for free slaves(I will give you some if I can)

3. You MUST use the application in the thread

4. RATS I know most about DarkComet, BlackShades, CyberGate, ClientMesh

Note

If I have not PM'ed you please be patient I may not be online or busy with someone else. I will try to update the "yes" after online to "no" if I go offline if I can remember ;)

Thanks guys I hope I can help everyone of you with your RAT issues<3

Vouches

(Dec 7, 2011 06:26 PM)Wre@ked Wrote: [\[CITE\]](#) Yes sorry it was all in a foreign language once you receive a new router we could try this again?

No need, solved it myself :p

Got access to 5 WEP-key protected wireless networks, but only 1 of them has a linksys router (the one we tried to forward).

The other ones aren't as easy/good to configure (they come with digital tv and phone).

Apparently the one with a linksys router was connected to a ISP from our university and my guess is that it has most ports blocked by default.

So thanks anyway, and I also got my first victim!

Not sure whether it is from my drive-by page or from my youtube video.

Under the Module Startup tab do you have that checked? With persistent installation. If not make sure that is done. Also make sure you have DUC installed and open on your computer.

Check out this tutorial on how to setup DarkComet: [Click Here](#)

Problem or Service Wanted:Portforwarding and setting up rat

Abstractionz - April 17, 2014, 4:53 pm

What RAT are you using: xRAT2.0

Time Zone: GMT +1

Problem or Service Wanted: Total noob at this, I would like help with setting up my RAT and getting a few installs

Nicole Mejia - July 4, 2014, 12:40 am

What RAT are you using:Any you suggest

Time Zone: GMT + 10:00

Problem or Service Wanted: Im new and a noob, just wanted to get in the scene. i would like help with: setting up, port forwarding, spreading,
