How to add function to your project

Tutorial By: Soul Collector

Hello to everyone. I saw lots of people asking how to add function to their projects. I saw tons of comments in my "Keylogger Tutorial" how to add "GetWindowState" function. So i decide to show you how to add simple function, its nothing advance .. its just stupid simple function. ENJOY!

STEP 1:

Open Visual Basic

Click File > Clic New Project > Windows Application > Choose name and click OK

STEP 2:

Now when you done with that i'll from toolbar add Button1 only.

STEP 3:

Now open the source and under everything(dont leave class) just type:

```
Code Private Function THIS_IS_EXAMPLE_HOW_TO_ADD() As String
    MsgBox("HEY EXAMPLE HERE", MsgBoxStyle.Critical, "AHH DAMN")
```

```
End Function
```

Now double click Button1 and write:

```
Code THIS_IS_EXAMPLE_HOW_TO_ADD()
And finally it should look something like this:
```

```
Code Public Class Form1
```

```
Private Sub Button1_Click(ByVal sender As System.Object, ByVal e As System.EventArgs)
Handles Button1.Click
```

```
    THIS_IS_EXAMPLE_HOW_TO_ADD()
```

```
End Sub
```

```
Private Function THIS_IS_EXAMPLE_HOW_TO_ADD() As String
    MsgBox("HEY EXAMPLE HERE", MsgBoxStyle.Critical, "AHH DAMN")
```

```
End Function
```

```
Private Sub Form1_Load(ByVal sender As System.Object, ByVal e As System.EventArgs)
Handles MyBase.Load
```

```
End Sub
```

End Class

Thats all ? Now you know how to add Function to your project. Cheers

**jackman** - November 30, 2009, 2:40 am

everybody should know those things, google "vb.net create your first application" ;) -> Hello World!

**Soul Collector** - November 30, 2009, 2:47 am

Yea man. But i get like 20 pm's everything with question how to add function. I even made custom project how to add.. still got pmed

**jackman** - November 30, 2009, 3:07 am

lol, tell them to fuck off and google :P

**Ajax1** - November 30, 2009, 7:43 pm

What's the point of using a function instead of a sub?

**-C0d3ak--** - November 30, 2009, 8:05 pm

(Nov 30, 2009 08:43 PM)Ajax1 Wrote: [\[CITE\]](#) What's the point of using a function instead of a sub? It's like dimming something, but with functions you can get more intricate.

**[Eprouvez]** - December 1, 2009, 1:01 am

Wouldn't it be easy creating a sub?

```
Code Public Shared Sub MyMessage(ByVal Message As String)
MsgBox(Message)
End Sub
But you could use Functions:
```

```
Code Public Shared Function MyMessage(ByVal Message As String) ' You could put As MsgBox
right here.
Return MsgBox(Message)
End Function
```

**Soul Collector** - December 1, 2009, 3:17 am

Ahh this is just simple nooby example :D

**[Eprouvez]** - December 1, 2009, 6:34 pm

(Dec 1, 2009 04:17 AM)Soul Collector Wrote: [\[CITE\]](#) Ahh this is just simple nooby example :D True haha

Cause noobs need to learn the basics haha

**newbie223** - December 1, 2009, 10:32 pm

function are very useful no function i dunno how make crypters lol

**Ziore** - December 10, 2009, 12:33 pm

Noob Friendly :D

Thanks

**Cytoplasm** - December 18, 2009, 10:09 am

Very nice TuT :~)!

What function would edit a timer interval?

**Jeff.** - December 18, 2009, 2:13 pm

Just do the same but then dont put the MsgBox but edit this to

Timer1.Interval = (Number :D )

Or not xD?

**Estemarlilx** - December 18, 2009, 2:40 pm

Nice tutorial self explaining and easy for noobs to understeand.Keep it up :)

**BoltzMAN** - December 20, 2009, 3:38 am

Self explained a lot

**TheBlackMarket** - February 19, 2010, 8:47 am

Thanks for the Tutorial Mate =D Good Work. BTW thanks for sharing the source code.

**InuyashaTB** - April 4, 2010, 8:03 pm

What is the difference between a Function and a Sub?

**cybr** - April 4, 2010, 8:10 pm

Functions return values, and Subs don't.

**GodWall** - April 5, 2010, 3:45 pm

Thanks, I found this to be helpful as a beginner who wants to code his own source and not just rip one, so thanks :)

:( Very true i r the nub for now but 2 months l8r i r be beastyy??

**Feather** - June 18, 2010, 7:21 am

Looks great, now i have learn me something more about functions :).

**kVp** - June 29, 2010, 4:26 pm

yes all this can be googled easily though nice work :)

**Surpintine** - June 29, 2010, 4:29 pm

Bro. You need to stop bumping every damn thread here with useless posts.

**Helvetia** - September 14, 2010, 9:05 am

Very good and nice TUT i like it

**JSvensson** - November 22, 2010, 12:25 pm

Thanks alot for the tut. :P

I've started coding for about a month ago and it aint goinbg so succesfull as i thought it would and i havnt really understand "functions" so i relly neede this tutorial. Thanks again :)

**Pulser** - November 22, 2010, 12:41 pm

Hello World is not for your own Functions, its just making a label changing the text after you clicked on a button (label1.text = "Hello World")

This tut show you how to add OWN funtions:

```
Private Function TEST() As String  
label.text = "Own Funtion"
```

So you created the funtion before giving commands in it.^^

Nice tut. Btw

**The-One** - January 3, 2011, 9:23 am

A function is made it return something, if you want to set a label you be better of with a sub. (Just cleaner?)

**Hopsin** - January 4, 2011, 9:59 am

Well,the screenshoot is outdated. Can you re-upload it if possible? Many thanks mate. Appreciated!

**warman561** - January 16, 2011, 5:18 pm

Thanks a lot man. This really helped now. Now I can incorporate what I know about C++ and Vb to make an ultimate Keylogger.

**autorunman22** - January 25, 2011, 8:23 am

(Nov 30, 2009 08:43 PM)Ajax1 Wrote: [CITE](#) What's the point of using a function instead of a sub? infuck, you can either use the sub or the function in this situation. To make things clear for noobs like me, you use function if you do need a variable to return to where it called from. Something like that. While sub doesnt return anything. I mean anything.

-edit sorry 4 mistake.

**gahoogy** - April 16, 2011, 2:39 pm

Thanks for the post, helps me understand VB a little better.

**nandz** - February 22, 2012, 9:28 am

ahh thank you, i understand how use functions with you!
