Thread: [Help making a password-protected page!](#)

Stay Plural - November 26, 2011, 12:51 pm

So I've been looking for a script all morning. I've found one, but then I realized I never got into learning php.

I don't know if this is the best and simplest code.

But what I found is here:

<http://pastebin.com/MLSbvrXv>

Also:

Code <?php

```
##
#
##
#
##
#
# Usage:
# Set usernames / passwords below between SETTINGS START and SETTINGS END.
# Open it in browser with "help" parameter to get the code
# to add to all files being protected.
# Example: password_protect.php?help
# Include protection string which it gave you into every file that needs to be protected
#
# Add following HTML code to your page where you want to have logout link
# <a href="http://www.example.com/path/to/protected/page.php?logout=1">Logout</a>
#
##
```

```
/*
```

```
--
```

SAMPLE if you only want to request login and password on login form.
Each row represents different user.

```
$LOGIN_INFORMATION = array(
    'zubrag' => 'root',
    'test' => 'testpass',
    'admin' => 'passwd'
);
```

```
--
```

SAMPLE if you only want to request only password on login form.
Note: only passwords are listed

```
$LOGIN_INFORMATION = array(
    'root',
```

```

    'testpass',
    'passwd'
);

--
*/

##
# SETTINGS START
##

// Add login/password pairs below, like described above
// NOTE: all rows except last must have comma "," at the end of line
$LOGIN_INFORMATION = array(
    'zubrag' => 'root',
    'admin' => 'adminpass'
);

// request login? true - show login and password boxes, false - password box only
define('USE_USERNAME', true);

// User will be redirected to this page after logout
define('LOGOUT_URL', 'http://www.example.com/');

// time out after NN minutes of inactivity. Set to 0 to not timeout
define('TIMEOUT_MINUTES', 0);

// This parameter is only useful when TIMEOUT_MINUTES is not zero
// true - timeout time from last activity, false - timeout time from login
define('TIMEOUT_CHECK_ACTIVITY', true);

##
# SETTINGS END
##

//
// do not change code below
//

// show usage example
if(isset($_GET['help'])) {
    die('Include following code into every page you would like to protect, at the very beginning (first
line):<br>&lt;?php include("'" . str_replace('\\', '\\\\', __FILE__) . "'); ?&gt;');
}

// timeout in seconds
$timeout = (TIMEOUT_MINUTES == 0 ? 0 : time() + TIMEOUT_MINUTES * 60);

// logout?
if(isset($_GET['logout'])) {
    setcookie("verify", "", $timeout, '/'); // clear password;
    header('Location: ' . LOGOUT_URL);
    exit();
}

```

```

}

if(!function_exists('showLoginPasswordProtect')) {

// show login form
function showLoginPasswordProtect($error_msg) {
?>
<html>
<head>
    <title>Please enter password to access this page</title>
    <META HTTP-EQUIV="CACHE-CONTROL" CONTENT="NO-CACHE">
    <META HTTP-EQUIV="PRAGMA" CONTENT="NO-CACHE">
</head>
<body>
    <style>
        input { border: 1px solid black; }
    </style>
    <div style="width:500px; margin-left:auto; margin-right:auto; text-align:center">
    <form method="post">
        <h3>Please enter password to access this page</h3>
        <font color="red"><?php echo $error_msg; ?></font><br />
        <?php if (USE_USERNAME) echo 'Login:<br /><input type="input" name="access_login" /><br />
        Password:<br />'; ?>
        <input type="password" name="access_password" /><p></p><input type="submit"
name="Submit" value="Submit" />
    </form>
    <br />
    <a style="font-size:9px; color: #B0B0B0; font-family: Verdana, Arial;"
href="http://www.zubrag.com/scripts/password-protect.php" title="Download Password
Protector">Powered by Password Protect</a>
    </div>
</body>
</html>

<?php
    // stop at this point
    die();
}
}

// user provided password
if (isset($_POST['access_password'])) {

    $login = isset($_POST['access_login']) ? $_POST['access_login'] : "";
    $pass = $_POST['access_password'];
    if (!USE_USERNAME && !in_array($pass, $LOGIN_INFORMATION)
    || (USE_USERNAME && ( !array_key_exists($login, $LOGIN_INFORMATION) ||
$LOGIN_INFORMATION[$login] != $pass ) )
    ) {
        showLoginPasswordProtect("Incorrect password.");
    }
    else {
        // set cookie if password was validated

```

```

setcookie("verify", md5($login.'%'.$pass), $timeout, '/');

// Some programs (like Form1 Bilder) check $_POST array to see if parameters passed
// So need to clear password protector variables
unset($_POST['access_login']);
unset($_POST['access_password']);
unset($_POST['Submit']);
}

}

else {

// check if password cookie is set
if (!isset($_COOKIE['verify'])) {
    showLoginPasswordProtect("");
}

// check if cookie is good
$found = false;
foreach($LOGIN_INFORMATION as $key=>$val) {
    $lp = (USE_USERNAME ? $key : ") .'%'.$val;
    if ($_COOKIE['verify'] == md5($lp)) {
        $found = true;
        // prolong timeout
        if (TIMEOUT_CHECK_ACTIVITY) {
            setcookie("verify", md5($lp), $timeout, '/');
        }
        break;
    }
}
if (!$found) {
    showLoginPasswordProtect("");
}

}

?>

```

From what I understand, I just need to set the password, and then the place where they're gonna be directed? But from there, I don't know where to enter the password and the other things.

Help I have no clue.
Thanks.

Could you tell me in which lines, I enter the password, and directing url?

Thanks bro<3

I need simple help, Please help, should only take a minute! Thanks.
