Thread: [Most Powerful SMTP Scanner for SALE \(4 versions available\)](#)

csclus - November 27, 2011, 7:16 pm

Version 1.0

the scanner is made by me in native c and you won't find it anywhere else.

- it's working only on linux/unix
- very fast (syn scan), many parallel threads (over 7000)
- checks open relay for each.
- checks if the server delivers email into inbox or bulk folder.
- you will get over 1000 smtps/day only from one server you put the scanner on.
- includes all the smtp codes so there won't be any risk to receive unknown reply from server.
- also checks for vnc & rdp connection and tests the rdp login (only real and working rdps)

Price: €300 (compiled version)

1. some of you will try to compare my scanner with hscan or xscan. for those I will explain the differences. neither hscan nor xscan nor other scanner will be as fast as mine. also they will test only if a login is valid and not if it is open relay or if is sending mail. so more than 90% of the servers found by these 2 programs will not work.
2. you can earn the money you spend on this scanner within a week/day (for the compiled version) by selling the smtps or you can earn even more by using them in Internet Marketing.
3. for those who will ask why am I selling it, it's because I've made already a lot of money with it and it's time to start other projects. Besides I don't have time to offer online support to old & new customers (more than 10 new customers daily). So I wanna retire from this business.
4. you will receive a bonus perl script to check every time the servers before selling them.
5. only PM is accepted.

Version 2.2 - UPDATE January 15, 2013

the power and speed of version 1.0 but with more features, a lot of them.

some of them:

- added domain detection + tlds hash table
- added same-user variable
- added new auth mechanisms (some of old methods are obsolete). now with autodetection for all possible login types.
- added new smtp codes very well structured, no false positives.
- added relay check with spoofing algorithms.
- added user validation with advanced autodetect dns methods.
- improved detection speed and rate
- improved a lot programming code, less memory allocation.
- added delays to avoid rbl and noops to keep connection alive.
- added interactive verbose messages(with color codes)
- added feature to skip non-auth servers
- removed VNC check, it was useless
- added md5 protection
- added random from generator

- modified output format, now saves method used too
- improved drop feature
- spoofs process name for ps, pstree
- and more ...

Price for the compiled version(executable): €500

Version 3.0 - UPDATE June 18, 2013

- improved speed (optimized a lot, now it's almost twice faster than version 2.2)
- totally changed the detection & connection method (less code, faster)
- added another scan method so there are two now which can be selected. The second added is the fastest one but due its speed can be detected as flood.
- added option to scan a file containing a list of ips (very useful).

Conclusion: each version is powerful but features are different, except version 3.0 which has them all and double speed.

Price: €800 (compiled version)

Final UPDATE

Version 4 final (codename: the Beast) - Sep 24, 2013

Features:

from previous versions:

- domain detection + tlds hash table
- same-user variable
- new auth mechanisms (some of old methods are obsolete). now with autodetection for all possible login types.
- new smtp codes very well structured, no false positives.
- relay check with spoofing algorithms.
- user validation with advanced autodetect dns methods.
- delays to avoid rbl and noops to keep connection alive.
- interactive verbose messages(with color codes)
- skip non-auth servers
- md5 protection
- random from generator
- spoofs process name for ps, pstree
- option to scan a file containing a list of ips (very useful).
- 2 scan methods(one is very fast, sometimes considered as flood)

NEW features:

- more user friendly
- reconfigured everything to allow even more threads(tasks + 2 types of threads).
- maximum improvement of memory management & functions optimization, no leaks, no useless code.
- added multi-treads per IP (means the speed of scanning increases by n number of threads per IP)
- added custom port selection feature
- option to select between multiple scan types (Regular, SSL or TLS also with default or custom ports)
- added auto scan with configuration file for better management.
- added tokens

- added other smtp codes which were reported missing
- now saves domain & hostname in log file
- added domain validation (you can validate during scan or a list with domains, which is very useful for cleaning), also it is saved in log
- checks if IP is honeypot during scan
- checks if IP is blacklisted (during scan or a list of IPs or a single IP for which shows detailed info).

Also, it has the option to use a custom list of RBL servers besides the built-in one.

- gets all domains for IP and shows potential users in case of hosting. I have added all possible functions a scanner can have

* Added timestamp to logs to all versions based on one of my customers' suggestion.

Price: €1400 (for SMTP scanner)

...and 2 addons are available for €300 each:

IMAP scanner and POP3 scanner which have the same features as the SMTP scanner (including TLS & SSL).

Price for All-In-One version (SMTP scanner + IMAP scanner + POP3 scanner): €2000

If you already purchased one of my versions and want to update it, here are the prices:

from version 1.0 to version 2.0 = €300

from version 1.0 to version 3.0 = €600

from version 1.0 to version 4.0 = €1800

from version 2.0 to version 3.0 = €300

from version 2.0 to version 4.0 = €1600

from version 3.0 to version 4.0 = €1300

UPDATE (Oct 26 2013)

-because imap scanner and pop3 scanner are not standalone programs but only addons to smtp scanner v4 (the beast), I decided to sell only the whole package(for v4 = 2000 euro).

-second reason is to lower the number of orders. This tool is too powerful and it must not be used by too many people in order to keep its success rate unharmed.

Recommendations:

Use dedicated servers! Better the server is more results you get.

If it's configured correctly and if it is used on a fast dedicated server you can get few thousands smtps/day. The scanner is NOT limited by the number of computers used. This means you can get more smtps than you can use or sell.

wanna retire from this business so "the Beast" source is available for sale. Price: 20k euro (price of ten sales)

P.S. skids, don't contact me asking for snapshots, videos, demos. I won't provide any proof to those who wanna scam people by showing them my snapshots.

P.S2 Read my thread carefully and make sure you have the money before contacting me. Let's don't waste both our time.

molly23 - November 27, 2011, 8:17 pm

REVIEW

I have been lucky to purchase this product and work with csclus to get me setup.

I must say that I'm hesitant to provide a review for this product as I could potentially be assisting in creating competition for myself. I've asked csclus to increase the price for this but he won't listen to me :).

I honestly can't believe how powerful this software is. I've purchased of smtp scanners from people on this forum and this hands down is the best. This scanner is custom coded and has more features than any of the others. It's much, much faster than the others as well. Really I can't ask for anything more from a scanner.

In regards to the support that I have received, it has been top class. I have had constant 1on1 chat with csclus through the entire process. He has shown me exactly how to get up and running and even though my Linux background is very weak he has been very professional in guiding me step by step.

The results so far are exactly as csclus has described, the price his asking is easily justified and personally I would be selling it for more.

I may not have been around on this forum for a long time, but I've been in the online IM game on other forums for years. In that time I've dealt with a tone of people personally and purchased many custom coded bots/software. What csclus provides as a product and support service is very impressive and to anyone who thinks differently or wants to question this please message me and I'll be happy to chat to you.

Good luck with the sales mate, but really I hope you don't sell anymore :). (please no more competition :))

Thanks.

The Real Slim Shaddy - December 4, 2011, 1:40 pm

The best coder on the forum I have ever seen vouch for this guy and best of luck for sales currently I am broke will buy your software once I get money

csclus - December 5, 2011, 5:42 am

It should be another review but unfortunately the other buyer has less than 20 posts so he cannot reply.

thank you molly23 for the nice review and I'm glad you are satisfied about my product.

also thanks shaddy for the nice words, I will keep the same price for you.

And I will think about increasing the price for the compiled version to \$500.

Anyway I don't intend to sell more than 10 copies so hurry up while this offer is still available.

ElPresidente - December 19, 2011, 12:14 pm

csclus, im interested in buying the compiled version but for a much lower price than that. so if ur left only with 1 copy and u want to get rid of it fast pm me please.

csclus - December 19, 2011, 12:38 pm

(Dec 19, 2011 01:14 PM)ElPresidente Wrote: [\[CITE\]](#) csclus, im interested in buying the compiled version but for a much lower price than that. so if ur left only with 1 copy and u want to get rid of it fast pm me please.

the price won't be lower than the one advertised because of 2 reasons:

self respect and respect for the other buyers who already bought it.

I'm not trying to convince anyone to buy it, I just wrote an accurate description about what it does and someone experienced will know why my tool is so unique, fast & good.

So, 2 copies left of the compiled version, final price \$500.

mxo69 - January 8, 2012, 11:09 pm

Hey guys, since I just snagged the last copy from csclus, I can be as honest as I want about it without creating any more competition for myself :P

First off, everyone who didn't buy this just lose out on a huge investment. This scanner is everything csclus claims, and then EVEN more. Mike promises the scanner should be able to find 1000's a day, but in reality we got more than 4x times that estimate :D The fact that it can also find VNC and RDP servers was a nice little surprise aswell. I am impressed with the speed it scans it, since I have worked w/ SYN scanners in the past but haven't quite had them go as fast as this does.

Overall I am extremely pleased with csclus's scanner and the way he handled the transaction. From the time we sent him payment, it took less than an hour for csclus to send everything and walk me through getting set up. Once the scanner is setup on a box, it's unexpectedly easy to use: 2 simple commands will make it scan an entire A range for relays, RDPs, and VNCs servers. What more could you ask for?

Bottom line: nice guy, great scanner, excellent experience and money well spent.

Thanks so much csclus, I appreciate your business and will definitely be looking forward to see what more you have to offer in the future :)

csclus - January 9, 2012, 4:16 pm

thank you all for the nice reviews you posted and I hope you will earn a lot of money using my scanner.

it's time to move on, so I wish you all good luck.

brenda_barnes - April 14, 2012, 5:38 am

hello please add me up on jonez_shaly@yahoo.com i am interested in doing business with you but i cant pm because i dont post and i need minimum of 10posts before i can send p,m so please add me there or pm ur id so i add

csclus - May 24, 2012, 2:55 am

for my customers:

(format of smtp list is ip:user:pass)

Code `#!/usr/bin/perl`

`use MIME::Base64;`

`use Net::SMTP;`

`$LIST=$ARGV[0];`

`print "SMTP Verifier\n";`

`print "***\n";`

`if ($#ARGV != 0) {print "Missing list.\n";exit;}`

`#==`

`$email_id = "receiver"; #change it`

`$email_domain = "yahoo.com"; #change it`

`#==`

`open(IN,$LIST);`

`while(chop($line=<IN>)){`

`@line = split (/:/, $line);`

`$ip=@line[0];`

`$user=@line[1];`

`$pass=@line[2];`

`print "\nTesting $ip $user $pass";`

```

$subject = "Verified SMTP - $ip";
if (! @line[1] ) { $user=""; }
if (! @line[2] ) { $pass=""; }
$smtp = Net::SMTP->new(
    $ip,
    Timeout => 20,
    Debug   => 0,
);

if (defined $smtp)
{
    if (@line[1]){
        $smtp->datasend("AUTH LOGIN\n");
        $smtp->response();
        $smtp->datasend(encode_base64($user) );
        $smtp->response();
        $smtp->datasend(encode_base64($pass) );
        $smtp->response();
    }
    $smtp->mail('testing@test.com');
    $smtp->to($email_id. '@' . $email_domain);
    $smtp->data();
    $smtp->datasend("To: $email_id@$email_domain\n");
    $smtp->datasend("From: SMTP Verifier <testing@test.com>\n");
    $smtp->datasend("Subject: $subject");
    $smtp->datasend("\n");
    $smtp->datasend("New SMTP Details:\n\nIP: $ip\nUSER: HIDDEN\nPASS: HIDDEN\n");
    $smtp->datasend("\n");
    $smtp->dataend();
    $smtp->quit;
}
else
{ print " - Connection failed"; }

}
close(IN);
print "\n**\n";
print "DONE!\n";

```

iUpgrade - May 24, 2012, 11:44 am

pm me your yahoo email id !!!! i`m interested in smtp servers.

cviperattacker007 - May 24, 2012, 11:56 am

Am highly instrested on this offer so PM me if you still have the 500 for sale offer and lets deal.
Thanks. :)

csclus - May 24, 2012, 3:52 pm

(May 24, 2012 11:44 AM)iUpgrade Wrote: [\[CITE\]](#) pm me your yahoo email id !!!! i`m interested in smtp servers.

for smtp servers check this thread:

<https://hackforums.net/showthread.php?tid=1189653>

also I already told your friend that the min quantity for an order is 20 pcs. I don't sell 1 or 2 or 4

smtps. Please check my terms first and post to the correct thread.

curl - December 14, 2012, 1:31 am

OP do you have any proof or can you provide me some proof with your scanner ?

Born - December 14, 2012, 3:14 am

Looks cool! Good luck with sales. Hope it goes good.

csclus - December 15, 2012, 9:14 am

(Dec 14, 2012 02:31 AM)curl Wrote: [\[CITE\]](#) OP do you have any proof or can you provide me some proof with your scanner ?

yes, I do have proof and no, I don't provide it.

already sold 10 copies so there is no need to provide any proof.

P.S.

you're the 3rd person this week only asking for "a proof".

maybe some snapshots or a demo video, right ?

well, lemme tell you something ... first person who asked for a proof didn't reply and the next day I saw his new thread selling a smtp scanner for \$10 with my snapshot on it. As you can imagine it was a fake one and that skid even make few bucks by scamming people.

none of my real buyers asked for a proof cause they already knew my reputation.

so, I suggest you to move on.

csclus - January 15, 2013, 3:32 pm

I updated scanner to version 2.0

the power and speed of version 1.0 but with more features, a lot of them.

check first post for details!

ocean_smith - March 9, 2013, 9:48 am

the price is just too much

take it down

csclus - March 9, 2013, 2:55 pm

(Mar 9, 2013 10:48 AM)ocean_smith Wrote: [\[CITE\]](#) the price is just too much

take it down

no one asked you to buy it or for your opinion.

if the price is too high for you then use a free one like hscan or another lame software.

I never targeted poor kids, that's the reason I set a min order quantity even for selling smtps.

tonymontana - June 17, 2013, 6:45 am

whats the price for the compiled version now?

csclus - June 18, 2013, 2:20 pm

SMTP Scanner was updated to version 3.0

Prices also were updated, check first page.

oluwo - June 18, 2013, 2:52 pm

i first doubt this guy until i gambled my money to buy scanner , we had argument about the camp but he told me to go practice and know how to use it, but i was not happy until i sat down and thought of what he said since then have being running scanner and doing camp, i did for just 3

companies and i earned good money, per camp is \$2k5 but as beginner i charged less, have earned \$4910 from his tools and am 100% positive that i can earn \$10k per week if i really wanna work harder, am not forcing any1 to buy its your choice i just share my idea

csclus - June 19, 2013, 2:44 am

(Jun 18, 2013 02:52 PM)oluwo Wrote: [\[CITE\]](#) i first doubt this guy until i gambled my money to buy scanner , we had argument about the camp but he told me to go practice and know how to use it, but i was not happy until i sat down and thought of what he said since then have being running scanner and doing camp, i did for just 3 companies and i earned good money, per camp is \$2k5 but as beginner i charged less, have earned \$4910 from his tools and am 100% positive that i can earn \$10k per week if i really wanna work harder, am not forcing any1 to buy its your choice i just share my idea

thanks for the vouch and I believe you can make more than your actual income if you'll learn & test more.

frankledges - July 26, 2013, 2:11 pm

Do you accept western union as a payment option?

csclus - July 27, 2013, 3:25 am

(Jul 26, 2013 02:11 PM)frankledges Wrote: [\[CITE\]](#) Do you accept western union as a payment option?

No, I don't! I accept only PM or WMZ.

csclus - September 24, 2013, 12:54 pm

Mass SMTP scanner v4 (codename: the Beast) is OUT with 2 addons now!

Check first page for the list of updates and prices.

jackal5671 - October 10, 2013, 4:54 pm

Great guy and incredibly knowledgeable about linux. For people complaining, you can't expect him to babysit you and tell you how to login with putty to a server. Value his time and show some respect and he's a pleasure to deal with.

All his software is top notch and you won't find anything like it out there unless you want to hire someone to code it for you.

spammer king - October 16, 2013, 3:30 pm

Best Seller on Hf !!!

Bought 20 Smtps with Auth. for only 100\$.

All Smtps were Valid and Inbox in German Mail Providers and they have good Spam Protection. ^^

In 1-2 Weeks i will buy his Scanner for 1,4k\$.

Trust him hes Legit !!

Nice++

Greets from Germany ?

alora247 - October 18, 2013, 1:50 am

I just bought the version 1.0 and as a noob(has no knowledge of this at all) I was guided to using it. now I thank him so much. I wish to upgrade one i perfect with this.

csclus - October 18, 2013, 2:54 am

thanks everyone for the nice reviews posted here!

d1ctator - November 27, 2013, 4:24 am

i can't pm you, i need 1000 smtps
please reply with contact info

FintCH - December 2, 2013, 2:56 pm

i want buy the scanner , i talk to you in skype but you not answer me ! please send me where i can found you online , send me pm ! waiting you bro , thanks

alora247 - December 4, 2013, 11:51 am

I want every body in the house to help me beg CSCLUS to please forgive me. I did wrong to him and I want you all to help me beg him. I didnt keep to my word and I think I deserve a second chance. Please house help me beg him.

csclus - February 24, 2014, 2:01 pm

Due poor exchange rate dollar has, I've just updated the prices (\$ into €).

Ar3s - February 27, 2014, 8:10 am

im interessted to buy your tool please write me..

Ar3s - March 2, 2014, 7:41 am

your write "added domain detection + tlds hash table" it searches all domains who are hostet at the ip adress?? right? or only the Hostname?

Edit// contact me on skype@ar3s_1337

~Ar3s

csclus - March 2, 2014, 3:01 pm

1. please don't post a reply every time you have a question. post only once and in case you forgot smth, edit the previous one.

2. I sent you a PM after your first reply, you didn't answer but you kept posting I can guess you're only interested in details about my product but not in buying it.

3. regarding your last question I will still answer: depends on the smtp scanner version. The tlds table was added in v2 and also the domain extraction. Each version has its own specs and functions and most of them were posted, some of them weren't described too much to avoid leeching which is smth on a daily basis in this kind of forums.

4. if you have any other questions please make sure there isn't an answer already in the description before asking them.

Thank you!

alexbraila90 - March 10, 2014, 3:02 am

I sent you payment to upgrade to v4 please let me know whe you online

eCoLoGy - March 10, 2014, 3:49 am

Amazing product you have here csclus.

I do Email Advertising and I can assure everyone here that nowadays, to find fast/inbox servers or smtps or whatever you use to deliver your emails it's a PAIN IN THE ASS, mainly for Hotmail!

I've not used this service but from what I see it really seems a good product.

Good luck with the sales csclus.

SmartDC, this is not your first time trying to trash my threads. You also posted on BlackMailer thread as far as I remember.

Do you have any particular reason for doing that? Except envy of course.

bar0009 - April 23, 2014, 3:37 pm

are you still offering this service?

csclus - April 24, 2014, 6:48 am

when my tools won't be available for sale, I will close the threads.

so, if it's still up, then yes!

#NoTrayIcon - April 24, 2014, 11:12 am

I promised a reply once i tested the scanner. It's a bit late but better late than never. It works as a charm if you have everything you need. The return on the investment is almost instant.. You plug it in and BAM.. smtps :)

The scanner is not hard to use, you only need a first run with csclus and you are done for ever.

I used it, got my money back and now i scan once and a while for a few smtps I use for some ads :).

WaveRyder - April 24, 2014, 12:32 pm

I am very interested in this product, is it still available for sell, i would like the v4 package.
Thanks.

csclus - April 24, 2014, 12:56 pm

Under 90 posts each?

I sell on this forum for more than 3 years and never had a complaint or a scam report.

I don't care if other people are scammers, I don't care if you've been scammed and that made you

the hater you are, I don't care how this thread looks to you, I don't care how much money you have, actually I don't care about you at all.

Make sure before trashing someone's thread saying it's not legit, to post evidence otherwise your replies are just garbage.

P.S. Some people come on this forum & they register just to send me a PM, because they don't find other way to contact me. They just don't care about your rule of credibility (over 60 posts). They only want my tools and guess what, either you post dumb replies or not, they still buy them because they already know what they want and what I have for sale. So do everyone a favor and get out of my thread!

antm4n4u - July 17, 2014, 10:07 am

i vouch for this scanner, going to a year now and am still using it.

uid0 - August 14, 2014, 3:33 am

Can you give me your skype,yahoo or jabber i want to buy this cracker.

blaza - September 6, 2014, 9:18 am

can you please upload proof pictures ?

csclus - September 8, 2014, 3:11 pm

(Sep 6, 2014 09:18 AM)blaza Wrote: [\[CITE\]](#) can you please upload proof pictures ?
read my first post and also my terms.

csclus - October 2, 2014, 4:57 am

(Oct 2, 2014 02:45 AM)Molecular Wrote: [\[CITE\]](#) Giving out the v4 version (worth 2000e) for free to who can figure out how to use it.

I guess it wasn't so hard admitting you're a lame script kiddie. Congrats! You did it, you admitted it! How pathetic is to sell backdoored servers (hacked probably with a public script) and read logs everyday and steal others ideas because you are too dumb to have your owns and make your own money?

P.S. Don't you think I already thought about possibility that some day a script kiddie, a lame hacker will find it on one of my customers servers ? Or that maybe some of my customers will buy some day backdoored servers from someone selling on HF?

P.S2 How frustrating is to have an expensive tool, used to make a lot of cash, and not knowing how to use it? Pathetic!!!

iSnitch - October 2, 2014, 6:11 am

I see you thought about it... Can't get it work but nobody will get it from me, that was just a post trying to get you help me, nothing else...

PS. Those are not backdoored servers, don't talk about stuff you don't know in my business.

botnet666 - October 6, 2014, 3:01 am

Hi csclus I want to buy your smtp scanner, please PM me your skype or jabber or any other chat ID to contact you...?

murt - October 6, 2014, 4:07 am

(Dec 19, 2011 01:38 PM)csclus Wrote: [\[CITE\]](#) the price won't be lower than the one advertised because of 2 reasons:

self respect and respect for the other buyers who already bought it.

I'm not trying to convince anyone to buy it, I just wrote an accurate description about what it does and someone experienced will know why my tool is so unique, fast & good.

So, 2 copies left of the compiled version, final price \$500.

\$500? Dude wtf is your problem, the thread says 500 euros.. thats about 120\$ extra youre trying to rip off.

csclus - October 6, 2014, 12:40 pm

(Oct 6, 2014 04:07 AM)murt Wrote: [\[CITE\]](#) \$500? Dude wtf is your problem, the thread says 500 euros.. thats about 120\$ extra youre trying to rip off.

Actually WTF is your problem?? It's my product, I can put whatever price I want or I can suspend the sales anytime. I don't have any obligations to you!! "trying to rip off" ??? of \$120 ??? Get lost poor kid!!!

P.S. and to prove that from now on v1 and v2 are no longer available for sale!!!

tonyrobertson - October 24, 2014, 8:48 pm

i need smtp scanner please PM me your YM ID

csclus - November 10, 2014, 6:15 am

Because soon I will retire from this business, I decided to offer a discount for a short period of time. Something like Black Friday except it will be lasting for a week long. You have enough time to collect the money. For any of my tools, it will be a 20% discount for new customers and 30% for old ones.

trg5 - November 27, 2014, 7:43 am

Bought this scanner few days ago it works like it's written in description . Csclus helped me alot to set up scanner and run it , I am happy with scanner. Thanks

boyzcode - February 21, 2015, 11:20 pm

I have just read about this scanner, and i will PM you soon

I have interest in your smtp scanner, kindly PM back, as i am not able to PM you

Oakleyharrod - March 25, 2015, 12:32 pm

Are they stil up for sale?

delhiair - May 27, 2017, 7:38 am

I am selling my license of "Version 4 final (codename: the Beast)"

If anyone wants then let me know!

[warn]

csclus - June 10, 2018, 11:37 pm

First of all I wanna thank all my customers for believing in the quality of my tools and for all the recommendations they made. It means a lot!

It's been more than 7 years since I started this business on hackforums. Yes, this is the only forum I ever advertised my tools. If you see them advertised somewhere else, those ads were created by people believing in my work, who were doing it either for a cut or without any hidden intention. I want to thank them too.

Although I blacklisted few licenses for sharing or reselling my tools, I also wanna thank those customers. If they spent 2k euro or more on one of my tools, it means they really appreciated my work.

But every beginning has an end and every end is a new beginning, so it's time to move on. Unfortunately due medical issue I cannot continue this business or any other. I will be around only few months to provide support for current customers or to make the last sales to new ones.

Although it's been so many years since I started this thread or the one for BlackMailer or for other scanners, they still remain the best in the market based on my customers opinions. Of course, they are far from perfect, I made each year updates and probably other features can be added but time is not on my side.

If anyone else wants to continue my work either to release new versions or simply to keep selling my tools, sources are available for sale at the price of 10 sales each.

I wanna appologize if I offended some of you during all these years, but I was young and arrogant and had many trust issues especially when so many tried to crack or steal my work. Still I don't know why I was banned few years on this forum and also why my ban was lifted but I still believe in the quality of most of the users around here.

These being said I wish you all good luck and believe in yourselves because hard work is always appreciated.

Cheers!
csclus[dot]com

csclus - August 17, 2020, 4:43 pm

After 10 years of selling tools for marketers, I decided it's time to move on due personal reasons.
Support for all my tools will be available for the next 6 months only.
Sales are available this month only.
It's been a nice experience but 10 years is way too much for doing the same thing.
I hope my tools helped all my customers to increase their income.

Good luck to everyone!!

P.S.

If anyone wants to continue my work, update the tools on a regular basis and continue the sales or just keep'em for themselves and use'em, sources for all my tools are available for sale.

trg5 - October 20, 2020, 1:57 pm

Hi Csclus,

I bought the scanner from you few years ago and tried to use it few days ago and I receiving error "An argument is missing! Press [ENTER] ...
Invalid argument". Could you please help me with the case? Thanks.

xgrandfile - January 21, 2022, 10:32 pm

I sent you direct message on skype and I saw on your status that version 5 is back. I wanted to be sure that i'm dealing with the right person and not just an imposter. I'm willing to purchase the Version 5. Please do kindly confirm if you are the one using your old skype account.

csclus - January 26, 2022, 11:53 am

it is not called V5. It's still V4 but there are many updates and fixes that I could call it V5.

I focused mostly on SSL and TLS scan, I added few new options and tokens, There are NO tiny memory leaks anymore. I added timeout procedures for slow servers, so new threads wont have to wait anymore for current threads to get a reply from server, which makes the scanner work faster.

You'll also get upon purchase a x64 version, not just the x86 one. The compilations now work on ANY linux/unix distro. No more conflicts with server glibc version.

I dont wanna be very specific in here about the updates and fixes and what exactly I have changed, added or removed because there are many people who try to copy my work and I don't wanna give them free tips.

Anyway, the scanner is usually updated on a regular basis, upon request based on the customers ideas (if they are viable and good for everyone else).

Although this is the ONLY forum I posted sales threads, I don't check it too often. You can get my contact details from my official website: csclus.com

Good luck!

wweissgauff - February 6, 2022, 2:15 pm

Can you create a contract here for me if i want to purchase this scanner ?

csclus - February 9, 2022, 11:41 am

(Feb 9, 2022 09:23 AM)wweissgauff Wrote: [\[CITE\]](#) Can you create a contract here for me if i want to purchase this scanner ?

if you want to purchase any of my tools available for sale, get my contact info from my official website and contact me, like everyone else.

I'm not familiar with contracts, I barely check my account on this forum not because I don't want but because my time is kinda limited especially in the last months due the volume of work I've done updating the tools.

so, if you are interested in purchasing any of my tools, do the same as other customers do.
thanks!

I am very ready to pay the 2000Euro for the tools , you understand why I want to go through the On Site Contract , it is safer for both parties involved,

if you declined to create a contract here for payment (contract is very easy to create and you get your payment ASAP) it means there is something Fishy and you can take the 2000Euros without delivering your end of the bargain . Simple

There are 2 categories of potential customers for my tools:

1. people who searched on google or this forum and found my threads. They don't have any history dealing with me so their first instinct is to contact me and ask a lot of technical questions about my tools to see if the price is justified. Some of them buy the cheapest tool first to see if the transaction goes smooth, then buy the other tools once they gain trust.
2. people who are already familiar with my tools, who saw them in action, and who know exactly what they buy.

You don't seem to be in any of these categories. You didn't want to contact me, you didn't ask any technical questions, your only question was if it's still available for sale. And TBH I find this kinda odd. Seems that your only goal is to start a contract.

Regarding the second part of your reply, you're trying to communicate with someone who doesn't even have a license for my scanner. He just posted a stupid question on this thread which proved to me and my customers that he doesn't own a genuine copy of my scanner, so I ignored him. There are some old versions of my scanner shared by wannabe hackers who found them on linux hacked boxes, but I blacklisted those licenses a long time ago. Sadly, there are still some people who buy these blacklisted copies at cheaper prices and when they realize they were scammed, they end up buying a genuine copy from me.

This being said, It's up to you if you wanna buy or not. But if you do, I expect some interest in finding more about my tools, not just the rush for a contract.

Have a nice day!

My Goal is to protect myself from been scammed simple , if you are really the true coder of this software, you will show some proof , , anybody can create a websites with contact details and scam people with it , your response shows you are doing everything possible to avoid transparency by going through a contract ,

I have read all comments on your wall and i can see that everybody that comment positively are all newbies or are not active on this site (that's red flag) , it indicate to me that this account are created just to act as vouch for your post and that's it , i have also gone through most of the commenters wall and can see they did not purchase something else from any other seller or deal with any other seller (red flags again). for me to go through this length to check all this it shows i am serious about buying your tools , but you could be an imposter claiming to be real coder ... i have the money ready once i see a valid form of proof or if you can show me on Team viewer or something . I hope you understand , anyone reading this will surely understand my point of view.

Most Powerful SMTP Scanner for SALE By Csclus V4 Updated Version

I bought this scanner few days ago from csclus direct but am not too good in linux and csclus is too busy to teach me

how to use it correctly but if anybody has the latest version i am ready to pay in order to learn to how to use it correct.

Contact me if you can teach me how to use it. Thanks

csclus - December 2, 2023, 6:40 am

Extremely fast (default config: ~12K threads), limited only by the server performance.

Recognizes all SMTP reply codes

Auto detects SMTP server from each domain/host

Domain detection & tlds hash table

All possible auth methods, not just AUTH PLAIN & AUTH LOGIN like the other scanners have.

User validation with autodetect dns method

Feature to skip no auth SMTPs and honeypots

Random FROM generator

Process name spoofing

Scans a list of IPs, a list of domains/hosts, a list of emails

Advanced tokens for users and passwords including unique macros taken from each ip/host/domain

Multi-threads per IP

Custom ports

Advanced bruteforce protection detection algorithms

Domain validation (NS AND MX)

Honeypot detection

Blacklist detection

Includes IMAP & POP3 modules which are 2 different scanners

SSL & TLS methods for scan + all-in-one.

detailed verbose to detect potential issues on some servers and fix it.

2 types of mass scan: 1)default(recommended) with global threads, threads per ip and tasks, 2)sys scan which can be considered flood.

this is the most powerful, performant, faster and easiest to use scanner on the market. It is coded in native c, it's not some script in python or windows joke wannabe scanner like others.

there are other features included but I'm not giving too much info about them or how the listed ones work in detail to avoid giving ideas to other coders who might wanna copy my work.

My contacts are listed on my official website: csclus.com so do NOT buy from other sources cause there is a 100% probability of being scammed. Price is the same since its launch, there are no discounts and if someone tries to sell it for less than the original price then it's a scam. All copies which were made public or resold were blacklisted and the scan results were either scrambled and altered with invalid logins or just not being displayed, depending on the version and year of compilation.

To serious buyers who are already my customers (for other scanners or massmailer) or to new ones who prove somehow that they have the funds to purchase smtp scanner(the beast) but are undecided yet, I can provide a demo version of the scanner which has a limited number of executions and some limitations. The demo is only an additional proof for people who might have doubts that scanner is working just fine with a genuine license.
