Thread: [\[SHOW-OFF\] Project7 \[SHOW-OFF\] & Looking for ideas \(Free VIP\)](#)

TwilightSpurkle - December 3, 2011, 3:48 am

So i made an registration & login program that uses MySQL, Basically it has everything: Logs your actions, Admin panel, Monetizing system.

But i have no idea what should i do with it?

And yeah, People who will give me an good idea will get free VIP on my program when it will be done :D

And the name is "Project 7".

Fat Tony - December 3, 2011, 4:21 am

Looks good nice work keep it up. =)

TwilightSpurkle - December 3, 2011, 4:58 am

So many views and only single reply? Come on guys.

Milopeach - December 3, 2011, 5:05 am

I'm looking for one of these for my new Project, is the source code free or do we need to purchase it?

TwilightSpurkle - December 3, 2011, 5:10 am

(Dec 3, 2011 06:05 AM)Milopeach Wrote: [\[CITE\]](#) I'm looking for one of these for my new Project, is the source code free or do we need to purchase it?

Well i made it for my own project only, but i can sell it, depends how much you are paying.

MaxPain - December 3, 2011, 5:56 am

how about making pokemon online game? The only problem that we should got, is the online thinky to see players online, OR you should make something like click per click or something like a youtube bot, I always like system like this <33 good luck with your project I know VB.net and stuff if you are interested pm me :D

United Kingdom - December 3, 2011, 5:59 am

Thats a nice tool

Wana help me secure my youtube bot

thanks

thanks

I might sell this source, You may offer me in PM.

xDowwdeen - December 3, 2011, 6:11 am

Looks nice. If you want any one to test it let me know. I will be willing to help

-xDowwdeen

Tedd - December 3, 2011, 6:34 am

Hey bro really nice. I would love to see further advancements for this. Like easy integration into projects using a class or something, and maybe setting up where in the program if they rank is mod, beta, etc then they can do this or that or they CAN'T do this or that. Good luck bro!

TwilightSpurkle - December 3, 2011, 6:38 am

(Dec 3, 2011 07:34 AM)Tedd Wrote: [\[CITE\]](#) Hey bro really nice. I would love to see further advancements for this. Good luck bro!

Well they can do that, Vip can view other profiles using their ID's (I'm gonna add more) Moderators: Ban, check logs, Beta-testers can do Everything but add money (Same as administrator) I will remove that rank when i'm done with it, And Owner can do anything.

n00b.ca - December 3, 2011, 7:37 am

1. Back Up Program

Maybe you can make a backup program. A program that backups all your files whenever specified, or automatically every day. You could also provide customer support, like a chat program or a program like team-viewer. You could hire some people to help the customers. If there's a some virus interfering with the backup, the program can connect to one of the HJT Team members to help the customer out.

2.Back Up Program for vb.NET projects (or any other programming language)

Same idea as the first one, but focuses on backing up projects in vb.NET

3.Chat Program

In this program people can webcam, chat by typing, emoticons, file transfer, and basic profiles and stuff.

4.A support program for the HJT Team

In this program people who think they are infected can download this and communicate with a HJT member to help solve their computer problem. It has functions that teamviewer has like remote desktop, chat, webcam, file transfer and maybe you could add an antivirus scanner? And of course

a donate button!

The possibilities are endless.

Make a program that people need and must be protected.

Tirox - December 3, 2011, 7:45 am

For the program actions as said before like " Not able to do this action at "This rank/class/lvl" but once reached this level " You may access such and such" something like that bud.

Rona™ - December 3, 2011, 8:09 am

This is pretty sick man! Good job!

jacob1421 - December 3, 2011, 8:10 am

Make a Study Program.... Help Spread Education Learning Makit a Tuturial world were people can share quizzes with others hold them on webserver and retrieve from webserver with ftp, and make honors list make quiz points so people can compare there selves - Education :) Study Area Flash Cards Test Practice Test Etc

TwilightSpurkle - December 3, 2011, 9:07 am

I will look into it, I'll be waiting for more ideas now.

Thanks.

Peroxide - December 3, 2011, 9:16 am

Looks very professional.

Are you going to be selling it?

?Mephobia - December 3, 2011, 9:29 am

with a little more advancements and maybe an ebook to know how to use it. u can sell it

Redeemz - December 3, 2011, 9:34 am

You must be very advanced at requests. I can see you going really far with this project. (aside from the GUI)

TheVBNetwork - December 3, 2011, 9:35 am

:S No offence, but sorry bro... nothing new... guessing that this is via FTP and data is stored in a txt file on a webhost, if not then just mysql data...

Tedd - December 3, 2011, 9:42 am

(Dec 3, 2011 10:35 AM)TheVBNetwork Wrote: [\[CITE\]](#) :S No offence, but sorry bro... nothing new... guessing that this is via FTP and data is stored in a txt file on a webhost, if not then just mysql data...

Dude the screenshot shows a MySQL database, how could you get that mixed up? And as for MySQL data, what is wrong with that? using php (if you're good at it) is probably the most secure way to retrieve data with visual basic if it is stored in a database.

TheVBNetwork - December 3, 2011, 9:48 am

I did not look at the pictures in deitail i just had a quick look at each photo to see what the app does... and nothing is wrong with using mysql what im trying to say is that theres nothing new... i have seen this done so many times its unreal... btw its called criticism, he asked for idea's and im stating the bad parts so he can evolve the app...

WEll i can, But i don't know how much it's worth.

(Dec 3, 2011 10:35 AM)TheVBNetwork Wrote: [\[CITE\]](#) :S No offence, but sorry bro... nothing new... guessing that this is via FTP and data is stored in a txt file on a webhost, if not then just mysql data...

But it has Rank system, Money system, Logs, Support thing.

TheVBNetwork - December 3, 2011, 10:33 am

Ahh Not All That Hard...

```
dim client as net.webclient
client.credentials = new net.networkcredentials("ftp-user","ftp-pass")
client.uploadstring(textbox1.text, "ftp://domain.com/support-Logs")
```

and its just that all the way through the code but just changing the values and directories

or if its in mysql its evan easier...

"INPUT" all values and then just read em...

Edit: Im Not Saying Its Not Good, but i would just advise you to do something special and out of the box...

IF you want, i could help you... but to be honest im not sure what this is supposed to do? is it a game? is it something like paypal (not literally)?

Deceptive - December 3, 2011, 10:53 am

Project-7 is already taken: <http://Project-7.net>

TwilightSpurkle - December 3, 2011, 11:13 am

IF you want, i could help you... but to be honest im not sure what this is supposed to do? is it a game? is it something like paypal (not literally)?

Yeah right, It can be hacked within 2 minutes, I wanna see you do that kinda program and get your entire database deleted.

(Dec 3, 2011 12:34 PM).bLaZeD Wrote: [\[CITE\]](#) I remember this, I hacked your sql db like 10 times and said I was Anonymous. trolol
Not 10, Maybe 2 times.

Now i secured it alot.

Rofl, Kid... Pipe Down... Theres Lots Of Ways To Prevent hacks... encrypt data before importing to the database... Oh and i would just like to say... it depends what database provider you have... if your paying for it, its almost impossible to hack, only way to do it is via bruteforce...

TwilightSpurkle - December 3, 2011, 12:38 pm

(Dec 3, 2011 01:37 PM)TheVBNetwork Wrote: [\[CITE\]](#) Rofl, Kid... Pipe Down... Theres Lots Of Ways To Prevent hacks... encrypt data before importing to the database... It's easy, Because you keep your password in your application & It can be decrypted very easily.

Coleak - December 3, 2011, 12:55 pm

Does this use straight mysql, or is it accompanied by php?

TwilightSpurkle - December 3, 2011, 12:58 pm

(Dec 3, 2011 01:55 PM)Coleak Wrote: [\[CITE\]](#) Does this use straight mysql, or is it accompanied by php?

Its uses straight connection for now, I have no idea how to INSERT values using PHP, And make it secure (So no one can get himself few thousands points). Going to improve it later.

.bLaZeD - December 3, 2011, 1:01 pm

I can try to creck it nao? I bored.

Pentagon - December 3, 2011, 1:13 pm

Good work, but I think using straight connection is a huge security risk.

Isn't it ?

I could be wrong too, never really payed attention at SQL with .NET ...

Coleak - December 3, 2011, 1:17 pm

(Dec 3, 2011 02:13 PM)Pentagon Wrote: [\[CITE\]](#) Good work, but I think using straight connection is a huge security risk.

It is, but so is php if you dont encrypt the response, original content.

Its pretty easy to spoof a response.
