Thread: [\[VB.NET\]\[Source\] HideMyAss Proxy Grabber \(Grab Thousands Of Proxies At Once\)](#)

Marketplace - December 4, 2011, 2:02 pm

I think no one released a HMA proxy grabber that retrieves proxy from different pages so I decided to make one.

You can grab proxies from page 1-49.

This can happen from the long awesome regex I wrote.

Animated Screenshot:

[img]<http://i1083.photobucket.com/albums/j394/xBlessingx/ProxyGrabber.gif>[/img]

Binary: <http://www.multiupload.com/UVW8XDI9VM>

Source: <http://www.multiupload.com/SI3M88HT3S>

Marketplace - December 4, 2011, 2:06 pm

Yeah I did add the feature to export IPs if you seen the screenshot

(???)?(???? - December 4, 2011, 2:08 pm

(Dec 4, 2011 03:06 PM)AlphaSquad Wrote: [\[CITE\]](#) Yeah I did add the feature to export IPs if you seen the screenshot

I think he meant IP:Port instead of IP | Port | Location ect.

Great share btw :)

Marketplace - December 4, 2011, 2:08 pm

I don't like the IP:Port way. To me, it's too messy. And thanks =)

(???)?(???? - December 4, 2011, 2:10 pm

(Dec 4, 2011 03:08 PM)AlphaSquad Wrote: [\[CITE\]](#) I don't like the IP:Port way. To me, it's too messy. And thanks =)

What if someone wanted to use them for a bot? They'd have to remove 80% every single line and format spaces.

Marketplace - December 4, 2011, 2:11 pm

Not unless they have a notepad where you can replace all words with something else such as Notepad++

Penthos - December 4, 2011, 2:15 pm

If i could make a suggestion... You should add an option to only select High or other Proxy only then it will be epic :)

Apart form that excellent work and great share :P

(???)?(???? - December 4, 2011, 2:17 pm

(Dec 4, 2011 03:15 PM)TrinityCoder Wrote: [\[CITE\]](#) If i could make a suggestion... You should add an option to only select High or other Proxy only then it will be epic :)

Apart from that excellent work and great share :P
I agree.

And just saying, you should really consider making ip:port.

developr - December 4, 2011, 2:17 pm

Nice share, got something similar in one of my own projects already :)
To the people asking for features, why don't you just check out the source and add them?

Best Regards

Marketplace - December 4, 2011, 2:22 pm

I don't have to do all the work. I'm just releasing this project to help people who needs proxies or for people who wants to practice. Besides, if I make new features, I have to make new animated screenshot, download links, etc. Too much work

Penthos - December 4, 2011, 2:22 pm

I won't use this myself as i made a few already, just trying to give some more ideas for the OP :)

Oh okay. Thanks for the tips. Hope you enjoy

ComputerNerd - December 4, 2011, 4:39 pm

For those of you that just want IP:PORT,

Find:

```
Code myWriter.WriteLine(myItem.Text & myItem.SubItems(1).Text & " | " &  
myItem.SubItems(2).Text & " | " & myItem.SubItems(3).Text & " | " & myItem.SubItems(4).Text & " | "  
& myItem.SubItems(5).Text & " | " & myItem.SubItems(6).Text & " | " & myItem.SubItems(7).Text)
```

Replace With:

```
Code myWriter.WriteLine(myItem.Text & myItem.SubItems(1).Text & ":" &  
myItem.SubItems(2).Text)
```

Result:

myItem.SubItems(2).Text)
Result:

Thanks for posting this. Pretty simple and easy to do

IIIBeBackSoon - December 4, 2011, 4:48 pm

I've also did the same thing awhile back. Here's my Thread:

<https://hackforums.net/showthread.php?tid=1591083>

Here's my Regex:

Code `(\d+\.\d+\.\d+\.\d+)\D+(\d{1,5})</td>\D+
(\w+)<\D+"d+">\D+"width:(\d+)%"\D+"d+">\D+"width:(\d+)%">\D+<td>(\w+)</td>\D+"rightborder">(\w+)</td>`

I'll break it down for you:

Group 1 returns the IP

Group 2 returns the Port

Group 3 returns the Country Image URL

Group 4 return the Country

Group 5 returns the Proxy Speed

Group 6 returns the Proxy Connection Time

Group 7 returns the Proxy Type(Ex. HTTP, HTTPS, etc.)

Group 8 returns Anonymity Level(Ex. Low, Medium, High)

Yeah but I tried your regex and didn't work and your download link doesn't work too

rsnerd - December 4, 2011, 6:05 pm

how would i make it export only those speed is over 50% or w.e?

idb. - December 5, 2011, 4:07 am

Make it so your users have the option of what columns they want to save, and the delimiter they want to use for the output. Already wrote a sub for it that you can use here:

<https://hackforums.net/showthread.php?tid=1967793&pid=17791858#pid17791858>

Hopefully this will help you customize your application a little bit more. Also, you should add in a real time proxy checker instead of trusting their lists because 90% of the time their results are full of shit.

Ethernal Five - December 5, 2011, 4:10 am

Yea that would be an good idea. Check the proxy if it works and then add it to the list :D

?Demon - December 5, 2011, 7:18 am

I'm going to test this out, maybe add a bit, thanks dude, new project to play with. ^.^

Reflexo Corporation - December 5, 2011, 10:09 am

Awsome work mate, thanks you so much!

Android Developer - December 5, 2011, 2:29 pm

Nice share and source code, thanks ?

Ultima - December 5, 2011, 3:21 pm

(Dec 4, 2011 03:05 PM)Alex Meanberg Wrote: [\[CITE\]](#) You need to add a feature so it just exports the ips, it's a pain in the ass. But anyways, nice program.

Here I edited it for you.

Uses IP:PORT export.

<http://www.mediafire.com/?eeyd4bw291ukoo8>

Onlykl - December 5, 2011, 3:53 pm

Good job. Im going to add more features on this one... Like tab ordering and so on :)

Marketplace - December 5, 2011, 4:48 pm

(Dec 5, 2011 05:10 AM)Uitklapbare Eekhoorn Wrote: [\[CITE\]](#) Yea that would be an good idea. Check the proxy if it works and then add it to the list :D

HideMyAss already checks if the proxies works or not and it's fresh proxies

Marketplace - December 5, 2011, 7:36 pm

(Dec 5, 2011 08:17 PM)Alex Meanberg Wrote: [\[CITE\]](#) Thanks. This program is pretty good, you should consider selling it.

It's not worth selling. There are a lot of free proxy grabber sources out in HF

T3chN9n3 - December 6, 2011, 4:04 pm

The bad thing about HideMyAss proxy's are none of them are US/Canada.. all china/poland/india etc and very slow and poor quality http proxies.

namefag - December 6, 2011, 4:27 pm

cool little app, glad you were able to put it together

if people are looking for a version that grabs them and exports is proper format, i made one and

released it here like a week or so ago

here is the link:

<https://hackforums.net/showthread.php?tid=1964976>

50GTB - December 7, 2011, 11:26 pm

```
myWriter.WriteLine(myItem.Text & myItem.SubItems(1).Text & ":" & myItem.SubItems(2).Text)
Your wrong its
```

```
myWriter.WriteLine( myItem.SubItems(1).Text & ":" & myItem.SubItems(2).Text)
Because then on ur code it would be writing the IPIP:PORT
```

justiceman - December 11, 2011, 6:18 am

Very nice job.

You should add some different features tho :)

SpK - December 11, 2011, 6:50 am

I don't know but your signature bugs me.

Dim i As Integer

InteRger?

Marketplace - December 11, 2011, 7:21 am

Oh i fixed it now.. thanks... brain fart when i was making that code

The1_phoenix - December 31, 2013, 4:20 pm

Hi

I know this thread is old!

Has anyone still got the zipped source code for this app? if so are you able to supply a link to download it.

The links provided by the op redirect - don't work any longer.

thanks in advance.

Sajuuk - December 31, 2013, 6:27 pm
