Thread: [Where to start my hacking career?](#)

boozfob - December 5, 2011, 8:13 am

sry for my bad english, im trying to get better

Hi, im new to hacking and was just going to ask where i should start to learn and what i should start to learn.

But as i understand so far is that hacking is very much different things but i have decided what i wanna learn to hack, or at least what i wanna learn to hack first

Its server hacking and website hacking i wanna start to learn first
where should i start? i have backtrack 5 R1 and first of all i have some basic questions about backtrack

i like to watch video tuts but with backtrack i dont understand how o get videos to work
i googled some but without succes, it says i need flash player but when i try to download i get error on that page, as if they didnt have anything that i can use
the page im downloading from is the one that youtube says i should download from
so a link to flashplayer that works with backtrack would be awesome
and then i have more questions,
How do i change the keyboard layout?
what normaly should be ? is now _ and so on, where do i change that?
Im from sweden so a swedish keyboard layout would be awesome

and then 2 small things that would be awesome to have, spotify and skype
is that possible to have in backtrack?

hope someone can help me and sry for my bad english and my newbie questions
Btw a good start maybe is to get anonymous
any tip on free vpn / proxys?
a free vpn program to backtrack would be good

There are allot of website hacking tutorials on this forum use the search button you will find many. I suggest manually learning injection attacks or if you want to be a noob/save time you can also use havij.

Good Luck On Your Hacking Career, Use A VPN.

do u know any good vpn that is free?

.Nick. - December 5, 2011, 8:19 am

You can hack perfectly fine on a windows machine, all the tools on BC are available for windows

and if not are available for a easier to use linux distro.

i have heard many that think bt is very good but i have no idea

anyone else have any ideas?

Stop watching videos on youtube .

- 1) Learn HTML
- 2) Learn PHP
- 3) Learn JS (Javascript)
- 4) Learn JAVA
- 5) Learn Python
- 6) Learn Flash CODE
- 7) Now look in well known applications/web applications and find loopholes in them (will still be hard even after knowing all that code)
- 8) Start up a botnet.
- 9) Use those "Loopholes" otherwise known as EXPLOITS to launch your infected file on your victims computer.
- 10) Get a Massive NET. (50k-100k)
- 11) You will now become a famous hacker just like this guy :
http://en.wikipedia.org/wiki/Loyd_Blankenship
- 12) Get caught by the government and end up working for them.

step 1 to step 11 sounds good

But i dont need to know what i should do for the next 10 years, i wanna know some basic stuff maybe some good tutorials?

and i was going to watch youtube to see how to change the keyboard layout
