Thread: [How to disable a Windows software firewall with metasploit video tutorial](#)

D??K 0DI? - December 5, 2011, 4:24 pm

Hey guys I started uploading some metasploit videos to a youtube account. Might start to do many videos on fun tools.

Will mostly be linux, possibly some windows tools like cain.

Let me know what you think thanks guys.

Might need to fullscreen it read all the text.

NICE TUTO MAN...KEEP UP THE GOOD QUALITY VIDEOS

ITTIHACK - December 6, 2011, 2:37 am

Great job.. The most important thing to get access in Windows is disabling firewall.. This method is good to solve this problem

ThanX

Mauri - December 6, 2011, 3:11 am

Great! nice video man! high quality vid

Bluening - December 6, 2011, 11:38 am

Really nice tutorial! It's good to see some quality content :) Good job!

Ho I did not know this one!

Nice sharing!

qriocity - March 9, 2012, 3:50 am

Great post, definitely gonna give this a go!

Valour - March 10, 2012, 11:05 am

This was really helpful Odin :D This was the first video which I watched on 720p (don't laugh at me.. ps I got a dl speed of 40kbps which doesnt buffer hd vids that easily).. :D Thank ya for the tuto :D

im really new with backtrack :P

rhost = remote host (target)
lhost = local host (attacker)

to see your IP in linux open a terminal and type

Code ifconfig

eth0 = Ethernet0 (wired)

wlan0 = Wireless ethernet (wireless)

lo0 = loopback address

to change your ip on eth0 you would open a terminal and type:

Code ifconfig eth0 x.x.x.x where x.x.x.x is the ip you want.
