Crash your Enemy PC if he locked in your RAT

Hack Control Panel and crash someone's Computer
If u want to crash someones computer.

You can do this way.

Step 1 : Go to start and open search

Step 2 : type .cpl and press search button

Step 3 : then u can find all control panel extension type files.

Step 4 : delete all those files

Step 5 : restart that computer.

Result : 1.Desktop will not work properly

2.You cant open My Computer anyhow

3.Cant Open Control Panel

& many things will be disordered.

Backup : If You want to back up for those files,what you have to do,1st search then copy and paste those .cpl files in a separate folder on desktop,then delete those files from actual target folder,which is C:\WINDOWS\system32

Enjoy!!

Pretty much enough to scare an enemy! xD

Masterbyte - December 6, 2011, 6:49 am

Thank you for the tutorial it's a nice defensive tactic :)

bernardbear - December 6, 2011, 9:36 am

hahaha thanks guys,.cpl will looking for it
