Thread: [how to disable clicking of calendar after first click?](#)

mysteriousmyster - December 8, 2011, 11:35 pm

i am using an DHTML calendar in my application. on clicking a date ,there is a form submit action.

i want to disable the calendar after first click ,so that user can not click the other date before the form submit.

my code is

PHP Code

```
<?php
<SCRIPT type="text/javascript">

function dateChanged(calendar)
{
    // Beware that this function is called even if the end-user only
    // changed the month/year. In order to determine if a date was
    // clicked you can use the dateClicked property of the calendar:
    if (calendar.dateClicked) {
        // OK, a date was clicked, redirect to /yyyy/mm/dd/index.php
        var y = calendar.date.getFullYear();
        var m = calendar.date.getMonth() + 1; // integer, 0..11
        var d = calendar.date.getDate(); // integer, 1..31
        var NewDate = y + "-" + m + "-" + d;
        document.getElementById("<?=$mydata[FILTER]?>").value = NewDate;
        submitForm();
    }
}
```

```
var tempDate = new Date(<?=$CalDate?>);
Calendar.setup({
    flat      : "<?=$mydata[FILTER]?>_show_date",    // ID of the parent element
    flatCallback:dateChanged,                      // our callback function
    weekNumbers:false,                            // Don't display week numbers
    date      : tempDate
    // Set calendar to start at selected date
});

document.getElementById("<?=$mydata[FILTER]?>").value = '<?=$mydata[FILTER]?>';
</script>
```
