Thread: [BSNL Broadband hack \(speed up internet\)](#)

black_apriel - December 9, 2011, 8:27 am

Here i show you that how you hack bsnl broadband for speed.

first you have to download angry ip scanner <http://www.angryip.org/w/Download>
install it.

now go to preference and add port 80.

in display select hosts with open port.

now select ip range.

here is important thing to remember that select ip range nere your ip .

for exp if your ip is 117.199.100.25 then you have to enter ip range from 117.199.96.1 to 117.199.105.255 .

because as your near ip address is from your state.

if you go far from your ip then you reach in other state,s ip address which do not work in your state.
so select ip range as near you.

now start scan.

it shows you ip address open on port 80.

now start with this ip.

enter ip in to your browser and press enter.

a small windows comes which asks you for modem(router) password.

the default username: admin and password: admin.

some have username: admin and password: password.

enter these userenames and if you lucky you enter in to modem.

now find the username from modem and copy it.

password in dotted form but it not to worry because mostly

users password is password.

now try these username to connect to the internet.

if you found account of high speed user then your speed become high.

for those user who have limted plan with this trick they use unlimited
and they would not be charged for usage.

??

BSNL using Port binding so your MAC address is bind with your username and phone number so it may not work to other place. i didnt try it.

rastinder - December 25, 2011, 9:17 pm

this is old trick & i didnt think this will work,but if u tried it personaly & recently then may this work
but acc 2 me this will not work

Eeluminati - December 25, 2011, 10:35 pm

Meh, I tried this.. Not sure if I am just stupid but it didn't work for me :(

bad - December 25, 2011, 11:03 pm

It does not works bro !! :(

Short msg

hunterblake - February 1, 2012, 8:51 am

Bro I Got It...

buT I dont Know The USername And Password

How To Fix Bro And I Tried

username: admin

password: admin

and

username: admin

password: password

Not WorkING Plss Help mE

ComNotMeBug - August 16, 2015, 2:10 am

Hi,

First of all let me introduce BSNL. Its an Indian Internet Service Provider (Broadband Connection

via DSL Technology using a Router).

This ISP imposes a cap on data usage and bandwidth limit on the users.

However for the sake of customer care they do not impose speed cap/data usage when surfing and downloading from this site: motive.bsnl.co.in/

Downloading ANY files from the above mentioned site gives an amazing speed of 20 MBPS

Coming to the point, my question is, "Is there any way to bypass the speed/data limit by masking every download from OTHER sites with the addresses mentioned above, so that the "server" thinks that we are downloading from the customer care website?"
