Thread: [Galaxy JDB](#)

?y??rion - December 13, 2011, 10:53 am

Anyone think it's good?

Is it worth the \$25?

moveax - December 13, 2011, 10:55 am

I know it's good, don't listen to the C&P thread below this one. a JDB's purpose is to download and execute, the OP did not do his homework and saw that the jdb was downloading and executing which coincidentally his JDB was downloading and executing to!

-bias

?y??rion - December 13, 2011, 10:57 am

I don't see the thread lol, what's the name?

Edit: Nvm, I see it.

moveax - December 13, 2011, 10:58 am

<https://hackforums.net/showthread.php?tid=2007501>

OP is blaming C&P on my partner.

m4dh4ck3r - December 13, 2011, 11:04 am

Galaxy Java is a Java Drive By Gen -> Creates a ZIP file of your HTML Files which you need to download and then upload it on a host and get a domain .

Check out Sparky Java (MINE :D LOL) -> Just upload your serverS(DUAL INFECTION - Infect two servers in one applet) in my Panel ,Choose ANY site to clone and your JDB is ready with 15 Masked domains the next second :) Same 25\$:)

PM me if you want a demo account :)

?y??rion - December 13, 2011, 11:09 am

Can your clone websites? That's the feature I'm currently wanting most.

m4dh4ck3r - December 13, 2011, 11:11 am

(Dec 13, 2011 12:09 PM)l?lwtfh?? Wrote: [\[CITE\]](#) Can your clone websites? That's the feature I'm currently wanting most.

Yes, Most of them...Instant Change :) . You don't have to make a zip file download and upload everytime you want to change . Just enter the site name you want to clone and it happens in Real Time :) .

?y??rion - December 13, 2011, 11:13 am

PM'd you with the problem I've got... lol.

m4dh4ck3r - December 13, 2011, 11:56 am

(Dec 13, 2011 12:13 PM)l?lwtfh?? Wrote: [\[CITE\]](#) PM'd you with the problem I've got... lol.

Adding PayPro now :) . Don't know when it will be reviewed .

moveax - December 13, 2011, 12:12 pm

Yes ours clones sites its best on hf

Btw mad ur jdb is not better because u can provide irrelevant domains we provide free hosting and our users actually receive the jar

?y??rion - December 13, 2011, 12:49 pm

Lol fail, I submitted all my info for paypro and then it says they're having problems ATM.

m4dh4ck3r - December 13, 2011, 4:26 pm

How do you know what domains I provide ?

My domains are based on fb,runescape,webcam,gamecheats and stuff like that .

Whats the point of free hosting when most people dnt know what hosting is or how to ftp into a server .

Galaxy is a jdb Gen ,it makes files . Sparky Java isn't a generator . I havn't specified it is anywher . Its just an easy 2 us JDB .

Galaxy is a jdb Gen ,it makes files . Sparky Java isn't a generator . I havn't specified it is anywher . Its just an easy 2 us JDB .How come people don't know what 'hosting' is? Or how to access the file manager? ??

m4dh4ck3r - December 13, 2011, 6:05 pm

Not everyone knows . I'm pretty sure even you had to see a tut with images when u 1st used a hosting or made a drive-by . Also have you used all jdb's to claim ur site cloner is the best ?

Who said people can't use my JDB on their domains ?

Whats the point of downloading the jar file if you don't allow reselling ? Do you allow reselling jars created in you Generator ?

moveax - December 13, 2011, 6:06 pm

We do allow reselling.

No, i did not use pictures it's common sense. ??

My site cloner is the best because it works with every site, what does your site cloner do?

m4dh4ck3r - December 13, 2011, 6:19 pm

mine is better cause changes take place instantly . Instead of having to download and upload evrytime :D

moveax - December 13, 2011, 6:20 pm

That doesn't even make sense. ??
How does
Laziness overcome functionality?

[H]ell - December 14, 2011, 1:41 am

What the fuck am I reading.
2 kids reaping: "NO MINE IS BETTER BLABLABLA".
The points made dont even make sense, lol.

Explain "IRRELEVANT DOMAINS" ?
Your's is a Java Drive By GENERATOR .
Mine is a EASY to make Java Drive By .
Both have their purposes .

?y??rion - December 14, 2011, 3:54 am

You get a free domain with Galaxy JDB, just sayin.

m4dh4ck3r - December 14, 2011, 4:13 am

Its a .co.cc or a .tk .
Even I can provide that , Its free for all .
I provide .com's and .info's :)

Alex™ - December 14, 2011, 4:18 am

We are actually working on getting a free com or .info for customers, The thing is your customers have to share domains ours don't. What yours does is just upload their exe to a website directory. (upload scripts can be found for free on the internet) Yours uses the same jar for every client, our generator is dynamic so each jar is different and that means if it gets detected all you have to do is make a new one to get rid of that detection.

m4dh4ck3r - December 14, 2011, 4:28 am

The Fact that you are providing .tk and .co.cc compensates for the .info and .com domains I provide .
Its been a month since launch and mine is still FUD :).
Even my customers Jars are dynamic a unique Jar is created for every user .
I'm working on getting unique info and com domains for all users too :) .

Could you please tell me in what way its unique please?

imsmartlol - January 12, 2012, 7:27 pm

do you offer free domains aswell? or just the jdb

luppa - January 25, 2012, 2:30 am

galaxyjdb is the best on hf
sparky is the hardest crap on earth

hxkd - January 25, 2012, 4:27 am

I can personally vouch for Alex's Galaxy JDB, it's the best I've ever used. Go with anyone else and you will be disappointed.

hxkd

luppa - January 25, 2012, 5:20 am

but the website seems to be down from here

http://host-tracker.com/check_res_ajax/9686813-0/

Cloud9™ - January 30, 2012, 1:19 pm

Well, you can check out mine too if you want. I'll just tell you some comparisons we have against others:

- Our website has 99.99% uptime, we really have not had any shutdowns for more than 1 hour.
- We have 4 servers that back us up against downtime.
- Our generator and source are being updated counstnatly.
- We work 100% online.
- 2 years experiance.
- Dashboard with stats, charts, and other information.
- And a lot more than that.

We may not offer hosting, due to the possibility of getting shutdown faster. If you've looked at other Java Drive-Bys like Sparky Java, you'll see they've faced more than a week of downtime due to reports on their hosting. Ours is offshore and since we actually don't host any kind of malware on our servers, we're safe from any prosticution. Our servers are also fast and cleaned hourly for top preformance. Hope you consider! Check the signature for more information.

No, you didn't create a program to obfuscate the jar yet. Why? Cause whenever you need help with programming, you make a thread about it on HF. Sorry man, but I knwo you don't have much programming experiance and I also know you're blowing shit out of your ass.

shinzoop1 - April 10, 2013, 6:43 pm

can i have help with my galaxy jdb ;/ i get the html file and the jar file then try to upload places and it

doesnt work somone pm me and halp plox

Alex™ - *April 10, 2013, 6:47 pm*

A 1 year and 6 month old thread? Really?

I've responded to all your pms within 5 seconds of you pming me?

?y??rion - *April 11, 2013, 8:40 am*

Closing. No idea why anyone would gravedig this...
